Work involves oversight and technical direction of system-wide issues requiring advanced levels of understanding of network theory and the specific enterprise network architecture; establishing overall strategic network standards and priorities; providing the highest level of technical guidance and direction in the design and implementation of networking solutions; analyzing the optimization of network system performance; overseeing the strategic interface of network systems configuration; using and incorporating broad technical knowledge of the diverse business areas within the enterprise in the assessment of network engineering technologies, computing systems hardware and software protocols. Additionally, positions provide high-level technical advice and guidance to managers and technical resources on which network technologies can be utilized to meet current and future organizational needs.

Duties, Tasks, and Responsibilities

Assigns and coordinates individual and staff activities, prioritizing assignments to meet assigned deadlines and allocating funds and resources.

Depending upon assignment may perform supervisory duties.

Establishes overall network standards and priorities; analyzes the optimization of network system performance.

Monitors the day-to-day office activities, prioritizing assignments to meet assigned deadlines and allocating funds and resources.

Oversees the design, evaluation, selection, implementation and support of major networks; reviews and evaluates network performance, risk and financial analysis feasibility studies.

Oversees the strategic interface of network systems configuration; strategically plans new configurations for operation into the network, using knowledge of the characteristics of the systems being added to the network and the specifications for network interfaces to insure effective integration and optimal network performance.

Provides complete assessments of the technical characteristics of the proposals and alternatives considered to optimize network performance.

Serves as coach and/or mentor to introduce new approaches and to facilitate performance.

Serves as the lead technical expert for the organization in the strategic oversight and planning for network engineering projects and programs.

Knowledge, Skills, and Abilities

Ability to analyze, evaluate, design and recommend network and cabling infrastructure architecture.

Ability to develop and prepare complex technical documents, reports and proposals.

Ability to effectively diagnose, isolate and expediently resolve complex problems pertaining network systems configurations.

Ability to effectively monitor program/project development.

Ability to explain protocols, technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Ability to translate technical terminology in terms understandable to management and technical staff and resources.

Considerable knowledge of Project Management concepts and principles.

Considerable knowledge of bandwidth application requirements, routing through network devices or Public Network Extensions.

Considerable knowledge of network operating systems.

Project planning and management skills, including scope of work, time estimation, and resource assignment.

Strong analytical and conceptual skills; ability to create original concepts/theories for various projects.

Strong interpersonal skills to resolve problems in a professional manner, lead working groups, negotiate and create consensus.

Thorough knowledge of new network architectures and implementation of networked computer systems emphasizing multiple platform environments.

Thorough knowledge of the TCP IP protocol suite, IP subnets and masking, and routing protocols.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Network Architect - Full Performance

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Work involves oversight and technical direction of system-wide issues requiring advanced levels of understanding of network theory and the specific enterprise network architecture; establishing overall strategic network standards and priorities; providing the highest level of technical guidance and direction in the design and implementation of networking solutions; analyzing the optimization of network system performance; overseeing the strategic interface of network systems configuration; using and incorporating broad technical knowledge of the diverse business areas within the enterprise in the assessment of network engineering technologies, computing systems hardware and software protocols. Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Network Designer - Developmental

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Determine user requirements and design specifications for computer networks. Plan and implement network upgrades. Design, test, and inspect the NRO's computer data communications systems. These systems include wide area networks (WANs), and local area networks (LANs), and internets. Analyze and organize the corresponding hardware and software combined solutions through network modeling and planning.

Short Summary:

Determine user requirements and design specifications for computer networks. Plan and implement network upgrades. Design, test, and inspect the NRO's computer data communications systems. These systems include wide area networks (WANs), and local area networks (LANs), and internets. Analyze and organize the corresponding hardware and software combined solutions through network modeling and planning.

Duties, Tasks, and Responsibilities

Adjust network sizes to meet volume or capacity demands

Communicate with customers, sales staff, or marketing staff to determine customer needs

Communicate with vendors to gather information about products, to alert them to future needs, to resolve problems, or to address systems maintenance issues

Coordinate installation of new equipment

Coordinate network operations, maintenance, repairs, or upgrades

Coordinate network or design activities with designers of associated networks

Design, build, or operate equipment configuration prototypes, including network hardware, software, servers, or server operation systems

Design, organize, and deliver product awareness, skills transfer, and product education sessions for staff and suppliers

Determine specific network hardware or software requirements, such as platforms, interfaces, bandwidths, or routine schemas

Develop and implement solutions for network problems

Develop conceptual, logical, or physical network designs

Develop disaster recovery plans

Develop network related documentation

Develop or maintain project-reporting systems

Develop or recommend network security measures, such as firewalls, network security audits, or automated security probes

Develop plans or budgets for network equipment replacement

Develop procedures to track and report network availability, reliability, capacity, or utilization

Estimate time and materials needed to complete projects

Evaluate network designs to determine if requirements are met efficiently and effectively

Explain design specifications to integration or test engineers

Monitor and analyze network performance and data input/output reports to detect problems, identify inefficient use of computer resources, or perform capacity planning

Participate in network technology upgrade or expansion projects, including installation of hardware and software and integration testing

Prepare design presentations and proposals for staff or customers

Prepare detailed network specifications, including diagrams, charts, equipment configurations, and recommended technologies

Prepare or monitor project schedules, budgets, or cost control systems

Research and test new or modified hardware or software products to determine performance and interoperability

Supervise engineers and other staff in the design or implementation of network solutions

Use network computer-aided design (CAD) software packages to optimize network designs

Knowledge, Skills, and Abilities

Ability to analyze, evaluate, design and recommend network and cabling infrastructure architecture.

Ability to develop and prepare complex technical documents, reports and proposals.

Ability to effectively diagnose, isolate and expediently resolve complex problems pertaining network systems configurations.

Ability to effectively monitor program/project development.

Ability to explain protocols, technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Ability to translate technical terminology in terms understandable to management and technical staff and resources.

Considerable knowledge of Project Management concepts and principles.

Considerable knowledge of bandwidth application requirements, routing through network devices or Public Network Extensions.

Considerable knowledge of network operating systems.

Project planning and management skills, including scope of work, time estimation, and resource assignment.

Strong analytical and conceptual skills; ability to create original concepts/theories for various projects.

Strong interpersonal skills to resolve problems in a professional manner, lead working groups, negotiate and create consensus.

Thorough knowledge of new network architectures and implementation of networked computer systems emphasizing multiple platform environments.

Thorough knowledge of the TCP IP protocol suite, IP subnets and masking, and routing protocols.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Network Designer - Expert

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 10/2/2012

Standard Occupational Code:
 [15-1143] Computer Network Architects
 [15-1143] Computer Network Architects

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Determine user requirements and design specifications for computer networks. Plan and implement network upgrades. Design, test, and inspect the NRO's computer data communications systems. These systems include wide area networks (WANs), and local area networks (LANs), and internets. Analyze and organize the corresponding hardware and software combined solutions through network modeling and planning.

Short Summary:
Determine user requirements and design specifications for computer networks. Plan and implement network upgrades. Design, test, and inspect the NRO's computer data communications systems. These systems include wide area networks (WANs), and local area networks (LANs), and internets. Analyze and organize the corresponding hardware and software combined solutions through network modeling and planning.

Duties, Tasks, and Responsibilities

Adjust network sizes to meet volume or capacity demands

Communicate with customers, sales staff, or marketing staff to determine customer needs

Communicate with vendors to gather information about products, to alert them to future needs, to resolve problems, or to address systems maintenance issues

Coordinate installation of new equipment

Coordinate network operations, maintenance, repairs, or upgrades

Coordinate network or design activities with designers of associated networks

Design, build, or operate equipment configuration prototypes, including network hardware, software, servers, or server operation systems

Design, organize, and deliver product awareness, skills transfer, and product education sessions for staff and suppliers

Determine specific network hardware or software requirements, such as platforms, interfaces, bandwidths, or routine schemas

Develop and implement solutions for network problems

Develop conceptual, logical, or physical network designs

Develop disaster recovery plans

Develop network related documentation

Develop or maintain project-reporting systems

Develop or recommend network security measures, such as firewalls, network security audits, or automated security probes

Develop plans or budgets for network equipment replacement

Develop procedures to track and report network availability, reliability, capacity, or utilization

Estimate time and materials needed to complete projects

Evaluate network designs to determine if requirements are met efficiently and effectively

Explain design specifications to integration or test engineers

Monitor and analyze network performance and data input/output reports to detect problems, identify inefficient use of computer resources, or perform capacity planning

Participate in network technology upgrade or expansion projects, including installation of hardware and software and integration testing

Prepare design presentations and proposals for staff or customers

Prepare detailed network specifications, including diagrams, charts, equipment configurations, and recommended technologies

Prepare or monitor project schedules, budgets, or cost control systems

Research and test new or modified hardware or software products to determine performance and interoperability

Supervise engineers and other staff in the design or implementation of network solutions

Use network computer-aided design (CAD) software packages to optimize network designs

Knowledge, Skills, and Abilities

Ability to analyze, evaluate, design and recommend network and cabling infrastructure architecture.

Ability to develop and prepare complex technical documents, reports and proposals.

Ability to effectively diagnose, isolate and expediently resolve complex problems pertaining network systems configurations.

Ability to effectively monitor program/project development.

Ability to explain protocols, technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Ability to translate technical terminology in terms understandable to management and technical staff and resources.

Considerable knowledge of Project Management concepts and principles.

Considerable knowledge of bandwidth application requirements, routing through network devices or Public Network Extensions.

Considerable knowledge of network operating systems.

Project planning and management skills, including scope of work, time estimation, and resource assignment.

Strong analytical and conceptual skills; ability to create original concepts/theories for various projects.

Strong interpersonal skills to resolve problems in a professional manner, lead working groups, negotiate and create consensus.

Thorough knowledge of new network architectures and implementation of networked computer systems emphasizing multiple platform environments.

Thorough knowledge of the TCP IP protocol suite, IP subnets and masking, and routing protocols.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Network Designer - Full Performance

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. The INFOSEC and COMSEC security requirements for the network add to the complexity of these positions. Positions at this level are responsible for performing moderately complex network designs; performing upgrades to limited segments of the network, and performing routine network operations and maintenance (O&M).

Short Summary:
The INFOSEC and COMSEC security requirements for the network add to the complexity of these positions. Positions at this level are responsible for performing moderately complex network designs; performing upgrades to limited segments of the network, and performing routine network operations and maintenance (O&M).

Duties, Tasks, and Responsibilities

With limited guidance, performs moderately complex O&M activities. Utilize network analysis tools to identify performance problems in the network. ☐Incumbents follow troubleshooting procedures for restoring the network to optimal performance levels. They assist senior technical staff in preparing troubleshooting procedures for restoring the network to optimal performance levels.

With limited guidance, performs moderately complex network designs using existing technology. ☐Plans network configurations for integration into the network, using knowledge of the performance characteristics of the systems being added to the network and the specifications for network interfaces to insure effective integration and optimal network performance. ☐Incumbents prepare technical proposals for presentation to the 's engineering review boards to add new technologies to the network.

With limited guidance, performs routine to moderately complex network upgrades. Reviews user requests for upgrades or additions to the network to assess impact on network performance and provides advice and guidance on the most practical technical approach to meeting user requirements. ☐Plans upgrades to existing network configurations, using knowledge of the performance characteristics of the systems being upgraded and the specifications for network interfaces to insure effective integration and optimal network performance. Incumbents prepare technical proposals for presentation to the 's engineering review boards for upgrading existing technologies.

Knowledge, Skills, and Abilities

Ability to draft requirements documents, correspondence and procedures in accordance with policies.

Ability to provide basic explanation of technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Ability to utilize basic network analysis tools to resolve routine network performance problems.

Ability to work in a team environment.

Good interpersonal skills to resolve problems in a professional manner.

Problem Solving — identifying problems and reviewing known implement solutions.

Project planning and management skills, including scope of work, time estimation, and resource assignment.

Strong analytical and conceptual skills; ability to create original concepts/theories for various projects.

Strong interpersonal skills to resolve problems in a professional manner, lead working groups, negotiate and create consensus.

Working knowledge of the CIO's policies and procedures relating to the design, upgrading, and operating and maintaining their network.

Working knowledge of their Communications and Information Security policies and practices.

Working knowledge of theory and practice underlying satellite and LAN/WAN network operations.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Data base user interface and query software — Database software; Microsoft Access

MS Office Suite

Markup language – HTML

Metric Tool

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Network Systems Analyst - Developmental

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Analyze, design, test, and evaluate network systems, such as local area networks (LAN), wide area networks (WAN), Internet, intranet, satellite, and other data communications systems. Perform network modeling, analysis, and planning. Research and recommend network and data communications hardware and software. Includes telecommunications specialists who deal with the interfacing of computer and communications equipment. May supervise computer programmers.

Short Summary:

Analyze, design, test, and evaluate network systems, such as local area networks (LAN), wide area networks (WAN), Internet, intranet, satellite, and other data communications systems. Perform network modeling, analysis, and planning. Research and recommend network and data communications hardware and software. Includes telecommunications specialists who deal with the interfacing of computer and communications equipment. May supervise computer programmers.

Duties, Tasks, and Responsibilities

Adapt and modify existing software to meet specific needs.

Assist users to diagnose and solve data communication problems.

Design and implement systems, network configurations, and network architecture, including hardware and software technology, site locations, and integration of technologies.

Develop and write procedures for installation, use, and troubleshooting of communications hardware and software.

Identify areas of operation that need upgraded equipment such as modems, fiber optic cables, and telephone wires.

Maintain needed files by adding and deleting files on the network server and backing up files to guarantee their safety in the event of problems with the network.

Maintain the peripherals, such as printers, that are connected to the network.

Monitor system performance and provide security measures, troubleshooting and maintenance as needed.

Set up user accounts, regulating and monitoring file access to ensure confidentiality and proper use.

Train users in use of equipment.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Equipment Selection — Determining the kind of tools and equipment needed to do a job.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Installation — Installing equipment, machines, wiring, or programs to meet specifications.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Administration software — Cisco Systems CiscoWorks; Element management software; NetIQ software; SolarWinds software

Configuration management software — Application management software; Automated installation software; Patch and upgrade management software; Software distribution software

Network monitoring software — Ethereal; Ipswitch What's Up Gold; Multi-router traffic grapher MRTG software; Symantec Intruder Alert

Network security or virtual private network VPN management software — Intrusion prevention system IPS software; Network and system vulnerability assessment software; Risk assessment software; Virtual local area network management software

Transaction security and virus protection software — CA eTrust; Encryption software; Penetration testing software; Virus scanning software

Tools

Integrated services digital network ISDN testers — Integrated services digital network ISDN analyzers

Multimeters — Network multimeters

Network analyzers — Asynchronous transfer mode ATM analyzers; Bit error rate BER testers; Network connectivity testers; Wide area network WAN analyzers

Power meters — Fiber optic power meters

Protocol analyzers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Network Systems Analyst - Expert

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Analyze, design, test, and evaluate network systems, such as local area networks (LAN), wide area networks (WAN), Internet, intranet, satellite, and other data communications systems. Perform network modeling, analysis, and planning. Research and recommend network and data communications hardware and software. Includes telecommunications specialists who deal with the interfacing of computer and communications equipment. May supervise computer programmers.

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Develop and write procedures for installation, use, and troubleshooting of communications hardware and software.

Identify areas of operation that need upgraded equipment such as modems, fiber optic cables, and telephone wires.

Maintain needed files by adding and deleting files on the network server and backing up files to guarantee their safety in the event of problems with the network.

Maintain the peripherals, such as printers, that are connected to the network.

Monitor system performance and provide security measures, troubleshooting and maintenance as needed.

Set up user accounts, regulating and monitoring file access to ensure confidentiality and proper use.

Train users in use of equipment.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Equipment Selection — Determining the kind of tools and equipment needed to do a job.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Installation — Installing equipment, machines, wiring, or programs to meet specifications.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Administration software — Cisco Systems CiscoWorks; Element management software; NetIQ software; SolarWinds software

Configuration management software — Application management software; Automated installation software; Patch and upgrade management software; Software distribution software

Network monitoring software — Ethereal; Ipswitch What's Up Gold; Multi-router traffic grapher MRTG software; Symantec Intruder Alert

Network security or virtual private network VPN management software — Intrusion prevention system IPS software; Network and system vulnerability assessment software; Risk assessment software; Virtual local area network management software

Transaction security and virus protection software — CA eTrust; Encryption software; Penetration testing software; Virus scanning software

Tools

Integrated services digital network ISDN testers — Integrated services digital network ISDN analyzers

Multimeters — Network multimeters

Network analyzers — Asynchronous transfer mode ATM analyzers; Bit error rate BER testers; Network connectivity testers; Wide area network WAN analyzers

Power meters — Fiber optic power meters

Protocol analyzers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Network Systems Analyst - Subject Matter Expert

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Analyze, design, test, and evaluate network systems, such as local area networks (LAN), wide area networks (WAN), Internet, intranet, satellite, and other data communications systems. Perform network modeling, analysis, and planning. Research and recommend network and data communications hardware and software. Includes telecommunications specialists who deal with the interfacing of computer and communications equipment. May supervise computer programmers.

Short Summary:

Analyze, design, test, and evaluate network systems, such as local area networks (LAN), wide area networks (WAN), Internet, intranet, satellite, and other data communications systems. Perform network modeling, analysis, and planning. Research and recommend network and data communications hardware and software. Includes telecommunications specialists who deal with the interfacing of computer and communications equipment. May supervise computer programmers.

Duties, Tasks, and Responsibilities

Adapt and modify existing software to meet specific needs.

Assist users to diagnose and solve data communication problems.

Design and implement systems, network configurations, and network architecture, including hardware and software technology, site locations, and integration of technologies.

Develop and write procedures for installation, use, and troubleshooting of communications hardware and software.

Identify areas of operation that need upgraded equipment such as modems, fiber optic cables, and telephone wires.

Maintain needed files by adding and deleting files on the network server and backing up files to guarantee their safety in the event of problems with the network.

Maintain the peripherals, such as printers, that are connected to the network.

Monitor system performance and provide security measures, troubleshooting and maintenance as needed.

Set up user accounts, regulating and monitoring file access to ensure confidentiality and proper use.

Train users in use of equipment.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Program Manager - Developmental

Skill Community: Enterprise IT

Labor Group: Project Management

Job Classification: Contractor

Status: Active

Date Effective: 8/2/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Helps determine both technical and business goals in consultation with top management and make detailed plans for the accomplishment of these goals. Responsible for formulating and enforcing work standards, assigning contractor schedules, reviewing work discrepancies, supervising Contractor personnel and communicating policies, purposes, and goals of the organization to subordinates. Shall be responsible for the overall contract.

Responsible for the personnel and technical management of all tasks. Insure that the full range of corporate resources are available and made available to perform the required tasks. Provide Quality Control Plan for all relevant requirements. Provide frequent periodic reports on the status of the contractor staffing. Provide management oversight of all contract personnel and ensure high quality and acceptable task completion and deliverables from contract personnel in compliance with the SOW. Responsible for the delivery of services to the customers as agreed to (by contract, SLA, by task order, etc)

Plans, directs, and coordinates activities in computer related activities including electronic data processing, information systems, systems analysis, and computer programming. Performs day-to-day management of the program, and develops long term and strategic objectives to ensure that end user requirements will be satisfied in future years of the contract. Performs horizontal integration planning, and interface with other functional areas. Ensures technical solutions and schedules are implemented in a timely manner. Provides supervision, training, and direction to contract staff, single point of contact for non-routine to moderately complex installation projects for communication networks. Accountable for meeting contractual performance criteria and due dates during service delivery, and successful overall project completion. Coordinates activities in support of program managers and teams that support the provisioning, design, installation, maintenance, and billing of services. Tracks and monitors service orders through completion and turn-up. Prepares deliverables (e.g. status reports, order information, open issues). Works in a team environment.

Short Summary:

Helps determine both technical and business goals in consultation with top management and make detailed plans for the accomplishment of these goals. Responsible for formulating and enforcing work standards, assigning contractor schedules, reviewing work discrepancies, supervising Contractor personnel and communicating policies, purposes, and goals of the organization to subordinates. Shall be responsible for the overall contract.

Duties, Tasks, and Responsibilities

Analyze computer and information needs from an operational and strategic perspective and determine immediate and long-range personnel and equipment requirements.

Assign and review work of systems analysts, programmers, other computer-related workers.

Assure SLA requirements are met.

Consult and coordinate with the appropriate Task Manager for problem resolution, task scheduling, new resource requirements, training needs, and task clarification.

Develop computer information resources, providing for data security and control, strategic computing, and disaster recovery.

Direct daily operations of department by: analyzing workflow, establishing priorities, developing standards and setting deadlines.

Directs the work of systems analysts, computer programmers, support specialists, and other computer-related workers.

Ensure that Contractor tasks are completed within the deadlines, contract personnel are qualified to perform the task, and potential personnel problems are pre-empted.

Establish and implement streamlined processes and procedures enabling the Contractor to rapidly respond to surge requirements for increased contract personnel.

Plan and coordinate activities such as installation and upgrading of hardware and software, programming and system design, development of computer networks, and implementation of Internet and intranet sites. They are increasingly involved with the upkeep, maintenance, and security of networks.

Plan consults with users, management, vendors, and technicians to assess computing needs and system requirements.

Review and approve all system charts and programs prior to their implementation.

Stay abreast of advances in technology.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Business Management and Administration

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

They are the point of contact for non-routine to moderately complex installation projects for communication networks. They are accountable for meeting contractual performance criteria and due dates during service delivery, and successful overall project completion. They coordinate activities in support of program managers and teams that support the provisioning, design, installation, maintenance, and billing of services. They track and monitor service orders through completion and turn-up, and prepare deliverables (e.g., status reports to Government, order information, open issues).

Short Summary:
Plans, directs, and coordinates computer-related activities including electronic data processing, information systems, systems analysis, and computer programming. Performs day-to-day management of the program, and develop long-term and strategic objectives to ensure that end user requirements will be satisfied in future years of the contract. Incumbents perform horizontal integration planning, and interface with other functional areas, ensuring that technical solutions and schedules are implemented in a timely manner.

Duties, Tasks, and Responsibilities

Analyze the computer and information needs of their organizations from an operational and strategic perspective and determine immediate and long-range personnel and equipment requirements.

Assign and review the work of systems analysts, programmers, and other computer-related workers.

Consult and coordinate with the appropriate Task Manager for problem resolution, task scheduling, new resource requirements, training needs, and task clarification.

Consult with users, management, vendors, and technicians to assess computing needs and system requirements.

Develop computer information resources, providing for data security and control, strategic computing, and disaster recovery.

Direct daily operations of department by: analyzing workflow, establishing priorities, developing standards and setting deadlines.

Direct the work of systems analysts, computer programmers, support specialists, and other computer-related workers.

Ensure that Contractor tasks are completed within the deadlines, tasking guidance from the Government is clear and unambiguous, contract personnel are qualified to perform the tasks, and potential personnel problems are pre-empted.

Establish and implement streamlined processes and procedures enabling the Contractor to rapidly respond to surge requirements for increased contract personnel. Assure SLA requirements are met.

Plan and coordinate activities such as installation and upgrading of hardware and software, programming and systems design, development of computer networks, and implementation of Internet and intranet sites. They are increasingly involved with the upkeep, maintenance, and security of networks.

Review and approve all systems charts and programs prior to their implementation.

Stay abreast of advances in technology.

Knowledge, Skills, and Abilities

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Economics and Accounting — Knowledge of economic and accounting principles and practices, the financial markets, banking and the analysis and reporting of financial data.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Management of Personnel Resources — Motivating, developing, and directing people.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Personnel and Human Resources — Knowledge of principles and procedures for personnel recruitment, selection, training, compensation and benefits, labor relations and negotiation, and personnel information systems.

Production and Processing — Knowledge of raw materials, production processes, quality control, costs, and other techniques for maximizing the effective manufacture and distribution of goods.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Customer relationship management CRM software — ACT! software; Microsoft Dynamics CRM; Performance Solutions Technology ManagePro; Provisioning software

Data base management system software — AlphaFour software; Database management software; Microsoft SQL Server; Oracle software

Development environment software — Borland Delphi; C; Microsoft .NET Framework; Microsoft Visual Basic

Enterprise resource planning ERP software — Microsoft Dynamics AX; Microsoft Dynamics NAV; Oracle E-Business Suite; Oracle JD Edwards OneWorld

Web platform development software — Dynamic hypertext markup language DHTML; Hypertext markup language HTML; JavaScript; Scripting languages

Tools

Access servers — File servers

Computer servers — Mid-range computers; Netware servers; Storage servers; Web servers

Network interface cards — Network interface cards NIC

Peripheral controller cards — Industry standard architecture/peripheral component interconnect ISA/PCI cards

Print servers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Program Manager - Manager

Skill Community: Enterprise IT

Labor Group: Project Management

Job Classification: Contractor

Status: Active

Date Effective: 8/2/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Helps determine both technical and business goals in consultation with top management and make detailed plans for the accomplishment of these goals. Responsible for formulating and enforcing work standards, assigning contractor schedules, reviewing work discrepancies, supervising Contractor personnel and communicating policies, purposes, and goals of the organization to subordinates. Shall be responsible for the overall contract.

Responsible for the personnel and technical management of all tasks. Insure that the full range of corporate resources are available and made available to perform the required tasks. Provide Quality Control Plan for all relevant requirements. Provide frequent periodic reports on the status of the contractor staffing. Provide management oversight of all contract personnel and ensure high quality and acceptable task completion and deliverables from contract personnel in compliance with the SOW. Responsible for the delivery of services to the customers as agreed to (by contract, SLA, by task order, etc)

Plans, directs, and coordinates activities in computer related activities including electronic data processing, information systems, systems analysis, and computer programming. Performs day-to-day management of the program, and develops long term and strategic objectives to ensure that end user requirements will be satisfied in future years of the contract. Performs horizontal integration planning, and interface with other functional areas. Ensures technical solutions and schedules are implemented in a timely manner. Provides supervision, training, and direction to contract staff, single point of contact for non-routine to moderately complex installation projects for communication networks. Accountable for meeting contractual performance criteria and due dates during service delivery, and successful overall project completion. Coordinates activities in support of program managers and teams that support the provisioning, design, installation, maintenance, and billing of services. Tracks and monitors service orders through completion and turn-up. Prepares deliverables (e.g. status reports, order information, open issues). Works in a team environment.

Short Summary:

Helps determine both technical and business goals in consultation with top management and make detailed plans for the accomplishment of these goals. Responsible for formulating and enforcing work standards, assigning contractor schedules, reviewing work discrepancies, supervising Contractor personnel and communicating policies, purposes, and goals of the organization to subordinates. Shall be responsible for the overall contract.

Duties, Tasks, and Responsibilities

Analyze computer and information needs from an operational and strategic perspective and determine immediate and long-range personnel and equipment requirements.

Assign and review work of systems analysts, programmers, other computer-related workers.

Assure SLA requirements are met.

Plan and coordinate activities such as installation and upgrading of hardware and software, programming and system design, development of computer networks, and implementation of Internet and intranet sites. They are increasingly involved with the upkeep, maintenance, and security of networks.

Plan consults with users, management, vendors, and technicians to assess computing needs and system requirements.

Review and approve all system charts and programs prior to their implementation.

Stay abreast of advances in technology.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Business Management and Administration

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Programmer - Developmental

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 10/6/2012

Standard Occupational Code:
[15-1131] Computer Programmers

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyze user needs and develop software solutions. Designs software or customizes software for client use with the aim of optimizing operational efficiency. May analyze and design databases within an application area, working individually or coordinating database development as part of a team. Researches, designs, develops, and tests operating systems-level software, compilers, and network distribution software for industrial, military, communications, aerospace, business, scientific, and general computing applications. Sets operational specifications and formulate and analyze software requirements. Apply principles and techniques of computer science, engineering, and mathematical analysis.
Analyzes and develops computer systems possessing a wide range of capabilities, including numerous engineering, business and records management functions. Develops plans for automated information systems from project inception to conclusion including systems requirements determination. Designs software tools and subsystems to support software reuse and domain analyses and manages their implementation. Manages software development and support using formal specifications, data flow diagrams, other accepted design techniques and Computer Aided Software Engineering (CASE) tools.

Short Summary:

Develops, creates, and modifies general computer applications software or specialized utility programs. Analyze user needs and develop software solutions. Designs software or customizes software for client use with the aim of optimizing operational efficiency. May analyze and design databases within an application area, working individually or coordinating database development as part of a team. Researches, designs, develops, and tests operating systems-level software, compilers, and network distribution software for industrial, military, communications, aerospace, business, scientific, and general computing applications. Sets operational specifications and formulate and analyze software requirements. Apply principles and techniques of computer science, engineering, and mathematical analysis.
Analyzes and develops computer systems possessing a wide range of capabilities, including numerous engineering, business and records management functions. Develops plans for automated information systems from project inception to conclusion including systems requirements determination. Designs software tools and subsystems to support software reuse and domain analyses and manages their implementation. Manages software development and support using formal specifications, data flow diagrams, other accepted design techniques and Computer Aided Software Engineering (CASE) tools.

Duties, Tasks, and Responsibilities

Advise customer about, or perform, maintenance of software system.

Analyze information to determine, recommend, and plan computer specifications and layouts, and peripheral equipment modifications.

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Confer with data processing and project managers to obtain information on limitations and capabilities for data processing projects.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with customers about software system design and maintenance.

Consult with customers or other departments on project status, proposals and technical issues such as software system design and maintenance.

Consult with engineering staff to evaluate interface between hardware and software, develop specifications and performance requirements and resolve customer problems.

Coordinate installation of software system.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop and direct software system testing and validation procedures.

Estimate software development costs and schedule.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Monitor functioning of equipment to ensure system operates in conformance with specifications.

Obtain and evaluate information on factors such as reporting formats required, costs, and security needs to determine hardware configuration.

Prepare reports and correspondence concerning project specifications, activities and status.

Recommend purchase of equipment to control dust, temperature, and humidity in area of system installation.

Review existing programs and assist in making refinements, reducing operating time, and improve current techniques.

Specify power supply requirements and configuration.

Store, retrieve, and manipulate data for analysis of system capabilities and requirements.

Supervise the work of programmers, technologists and technicians and other engineering and scientific personnel.

Train users to use new or modified equipment.

Utilize microcontrollers to develop control signals, implement control algorithms and measure process variables such as temperatures, pressures and positions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Database management system software — Computer Associates integrated data management system CA-IDMS; Database management software; Microsoft SQL Server; Oracle DBMS

Development environment software — C; Embedded systems development software; IBM Rational Rose XDE Developer; Microsoft Visual Basic

Object or component oriented development software — C++; Self; Simulation language SIMULA; Sun Microsystems Java

Program testing software — Defect tracking software; Mercury Interactive LoadRunner; Source code editor software; Usability testing software

Web platform development software — Apache Struts; Hypertext markup language HTML; JavaScript; Ruby on Rails

Tools

Desktop computers

High end computer servers — Application servers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Programmer - Expert

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyze user needs and develop software solutions. Designs software or customizes software for client use with the aim of optimizing operational efficiency. May analyze and design databases within an application area, working individually or coordinating database development as part of a team. Researches, designs, develops, and tests operating systems-level software, compilers, and network distribution software for industrial, military, communications, aerospace, business, scientific, and general computing applications. Sets operational specifications and formulate and analyze software requirements. Apply principles and techniques of computer science, engineering, and mathematical analysis.
Analyzes and develops computer systems possessing a wide range of capabilities, including numerous engineering, business and records management functions. Develops plans for automated information systems from project inception to conclusion including systems requirements determination. Designs software tools and subsystems to support software reuse and domain analyses and manages their implementation. Manages software development and support using formal specifications, data flow diagrams, other accepted design techniques and Computer Aided Software Engineering (CASE) tools.

Duties, Tasks, and Responsibilities

Advise customer about, or perform, maintenance of software system.

Analyze information to determine, recommend, and plan computer specifications and layouts, and peripheral equipment modifications.

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Confer with data processing and project managers to obtain information on limitations and capabilities for data processing projects.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with customers about software system design and maintenance.

Consult with customers or other departments on project status, proposals and technical issues such as software system design and maintenance.

Consult with engineering staff to evaluate interface between hardware and software, develop specifications and performance requirements and resolve customer problems.

Coordinate installation of software system.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop and direct software system testing and validation procedures.

Estimate software development costs and schedule.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Monitor functioning of equipment to ensure system operates in conformance with specifications.

Obtain and evaluate information on factors such as reporting formats required, costs, and security needs to determine hardware configuration.

Prepare reports and correspondence concerning project specifications, activities and status.

Recommend purchase of equipment to control dust, temperature, and humidity in area of system installation.

Review existing programs and assist in making refinements, reducing operating time, and improve current techniques.

Specify power supply requirements and configuration.

Store, retrieve, and manipulate data for analysis of system capabilities and requirements.

Supervise the work of programmers, technologists and technicians and other engineering and scientific personnel.

Train users to use new or modified equipment.

Utilize microcontrollers to develop control signals, implement control algorithms and measure process variables such as temperatures, pressures and positions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Database management system software — Computer Associates integrated data management system CA-IDMS; Database management software; Microsoft SQL Server; Oracle DBMS

Development environment software — C; Embedded systems development software; IBM Rational Rose XDE Developer; Microsoft Visual Basic

Duties, Tasks, and Responsibilities

Advise customer about, or perform, maintenance of software system.

Analyze information to determine, recommend, and plan computer specifications and layouts, and peripheral equipment modifications.

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Confer with data processing and project managers to obtain information on limitations and capabilities for data processing projects.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with customers about software system design and maintenance.

Consult with customers or other departments on project status, proposals and technical issues such as software system design and maintenance.

Consult with engineering staff to evaluate interface between hardware and software, develop specifications and performance requirements and resolve customer problems.

Coordinate installation of software system.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop and direct software system testing and validation procedures.

Estimate software development costs and schedule.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Monitor functioning of equipment to ensure system operates in conformance with specifications.

Obtain and evaluate information on factors such as reporting formats required, costs, and security needs to determine hardware configuration.

Prepare reports and correspondence concerning project specifications, activities and status.

Recommend purchase of equipment to control dust, temperature, and humidity in area of system installation.

Review existing programs and assist in making refinements, reducing operating time, and improve current techniques.

Specify power supply requirements and configuration.

Store, retrieve, and manipulate data for analysis of system capabilities and requirements.

Supervise the work of programmers, technologists and technicians and other engineering and scientific personnel.

Train users to use new or modified equipment.

Utilize microcontrollers to develop control signals, implement control algorithms and measure process variables such as temperatures, pressures and positions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Database management system software — Computer Associates integrated data management system CA-IDMS; Database management software; Microsoft SQL Server; Oracle DBMS

Development environment software — C; Embedded systems development software; IBM Rational Rose XDE Developer; Microsoft Visual Basic

Object or component oriented development software — C++; Self; Simulation language SIMULA; Sun Microsystems Java

Program testing software — Defect tracking software; Mercury Interactive LoadRunner; Source code editor software; Usability testing software

Web platform development software — Apache Struts; Hypertext markup language HTML; JavaScript; Ruby on Rails

Tools

Desktop computers

High end computer servers — Application servers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Programmer - Senior

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyze user needs and develop software solutions. Designs software or customizes software for client use with the aim of optimizing operational efficiency. May analyze and design databases within an application area, working individually or coordinating database development as part of a team. Researches, designs, develops, and tests operating systems-level software, compilers, and network distribution software for industrial, military, communications, aerospace, business, scientific, and general computing applications. Sets operational specifications and formulate and analyze software requirements. Apply principles and techniques of computer science, engineering, and mathematical analysis.
Analyzes and develops computer systems possessing a wide range of capabilities, including numerous engineering, business and records management functions. Develops plans for automated information systems from project inception to conclusion including systems requirements determination. Designs software tools and subsystems to support software reuse and domain analyses and manages their implementation. Manages software development and support using formal specifications, data flow diagrams, other accepted design techniques and Computer Aided Software Engineering (CASE) tools.

Short Summary:

Develops, creates, and modifies general computer applications software or specialized utility programs. Analyze user needs and develop software solutions. Designs software or customizes software for client use with the aim of optimizing operational efficiency. May analyze and design databases within an application area, working individually or coordinating database development as part of a team. Researches, designs, develops, and tests operating systems-level software, compilers, and network distribution software for industrial, military, communications, aerospace, business, scientific, and general computing applications. Sets operational specifications and formulate and analyze software requirements. Apply principles and techniques of computer science, engineering, and mathematical analysis.
Analyzes and develops computer systems possessing a wide range of capabilities, including numerous engineering, business and records management functions. Develops plans for automated information systems from project inception to conclusion including systems requirements determination. Designs software tools and subsystems to support software reuse and domain analyses and manages their implementation. Manages software development and support using formal specifications, data flow diagrams, other accepted design techniques and Computer Aided Software Engineering (CASE) tools.

Duties, Tasks, and Responsibilities

Advise customer about, or perform, maintenance of software system.

Analyze information to determine, recommend, and plan computer specifications and layouts, and peripheral equipment modifications.

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Confer with data processing and project managers to obtain information on limitations and capabilities for data processing projects.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with customers about software system design and maintenance.

Consult with customers or other departments on project status, proposals and technical issues such as software system design and maintenance.

Consult with engineering staff to evaluate interface between hardware and software, develop specifications and performance requirements and resolve customer problems.

Coordinate installation of software system.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop and direct software system testing and validation procedures.

Estimate software development costs and schedule.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Monitor functioning of equipment to ensure system operates in conformance with specifications.

Obtain and evaluate information on factors such as reporting formats required, costs, and security needs to determine hardware configuration.

Prepare reports and correspondence concerning project specifications, activities and status.

Recommend purchase of equipment to control dust, temperature, and humidity in area of system installation.

Review existing programs and assist in making refinements, reducing operating time, and improve current techniques.

Specify power supply requirements and configuration.

Store, retrieve, and manipulate data for analysis of system capabilities and requirements.

Supervise the work of programmers, technologists and technicians and other engineering and scientific personnel.

Train users to use new or modified equipment.

Utilize microcontrollers to develop control signals, implement control algorithms and measure process variables such as temperatures, pressures and positions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Database management system software — Computer Associates integrated data management system CA-IDMS; Database management software; Microsoft SQL Server; Oracle DBMS

Development environment software — C; Embedded systems development software; IBM Rational Rose XDE Developer; Microsoft Visual Basic

Object or component oriented development software — C++; Self; Simulation language SIMULA; Sun Microsystems Java

Labor Group: Project Management

Job Classification: Contractor

Status: Active

Date Effective: 5/30/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab.

Gathers, analyzes, and composes technical information. Conducts research and ensures the use of proper technical terminology. Translates technical information into clear, readable documents and presentation to be used by technical and non-technical personnel. Supports the development of all types of documents and reports by developing and updating graphics presentations to improve the quality and enhance the usability of these documents. Responsible for integrating the graphics and information generated from meetings and facilitation sessions, using automated tools, and research methods into final deliverable documents.

Short Summary:

Gathers, analyzes, and composes technical information. Conducts research and ensures the use of proper technical terminology. Translates technical information into clear, readable documents and presentation to be used by technical and non-technical personnel. Supports the development of all types of documents and reports by developing and updating graphics presentations to improve the quality and enhance the usability of these documents. Responsible for integrating the graphics and information generated from meetings and facilitation sessions, using automated tools, and research methods into final deliverable documents.

Duties, Tasks, and Responsibilities

Assist PMO in assessing, documenting, and tracking new program requirements and follow-on technical exchange meetings (TEMs).

Assist in the preparation of management plans and reports.

Compose technical documents including user's manuals, training materials, installation guides, proposals, and reports.

Conduct research and ensure the use of proper technical terminology.

Coordinate project schedules, including participation in meetings; documentation and distribution of minutes and action items; and tracing action items for successful completion.

Edit functional descriptions, system specifications, user's manuals, special reports, or any other customer deliverables and documents.

Facilitate meetings and information sessions.

Maintain correspondence suspense files, records, files for reports, operating procedures, internal memorandums, and composes correspondence.

Plan and coordinate program management process activities such as Program Reviews and Control Gate Reviews including scheduling of meetings and preparation of briefings/presentations.

Provide documentation, requirements, and information updates.

Provide support such as technical writing, technical editing of word processing and other computer-based documents, integration of various sources into a cohesive product which may be delivered as computer based magnetic media, preparation of graphical and narrative presentation material.

Support task requiring the collecting, compiling, evaluating and publishing of information and statistical data in documents, records, forms, reports, plans, policies, and regulations.

Support the PM in resource leveling planning and analysis.

Knowledge, Skills, and Abilities

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Economics and Accounting — Knowledge of economic and accounting principles and practices, the financial markets, banking and the analysis and reporting of financial data.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Management of Personnel Resources — Motivating, developing, and directing people.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Personnel and Human Resources — Knowledge of principles and procedures for personnel recruitment, selection, training, compensation and benefits, labor relations and negotiation, and personnel information systems.

Production and Processing — Knowledge of raw materials, production processes, quality control, costs, and other techniques for maximizing the effective manufacture and distribution of goods.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Customer relationship management CRM software — ACT! software; Microsoft Dynamics CRM; Performance Solutions Technology ManagePro; Provisioning software

Data base management system software — AlphaFour software; Database management software; Microsoft SQL Server; Oracle software

Development environment software — Borland Delphi; C; Microsoft .NET Framework; Microsoft Visual Basic

Enterprise resource planning ERP software — Microsoft Dynamics AX; Microsoft Dynamics NAV; Oracle E-Business Suite; Oracle JD Edwards OneWorld

Web platform development software — Dynamic hypertext markup language DHTML; Hypertext markup language HTML; JavaScript; Scripting languages

Tools

Access servers — File servers

Computer servers — Mid-range computers; Netware servers; Storage servers; Web servers

Network interface cards — Network interface cards NIC

Peripheral controller cards — Industry standard architecture/peripheral component interconnect ISA/PCI cards

Print servers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Gathers, analyzes, and composes technical information. Conducts research and ensures the use of proper technical terminology. Translates technical information into clear, readable documents and presentation to be used by technical and non-technical personnel. Supports the development of all types of documents and reports by developing and updating graphics presentations to improve the quality and enhance the usability of these documents. Responsible for integrating the graphics and information generated from meetings and facilitation sessions, using automated tools, and research methods into final deliverable documents.

Short Summary:
Gathers, analyzes, and composes technical information. Conducts research and ensures the use of proper technical terminology. Translates technical information into clear, readable documents and presentation to be used by technical and non-technical personnel. Supports the development of all types of documents and reports by developing and updating graphics presentations to improve the quality and enhance the usability of these documents. Responsible for integrating the graphics and information generated from meetings and facilitation sessions, using automated tools, and research methods into final deliverable documents.

Duties, Tasks, and Responsibilities

Assist PMO in assessing, documenting, and tracking new program requirements and follow-on technical exchange meetings (TEMs).

Assist in the preparation of management plans and reports.

Compose technical documents including user's manuals, training materials, installation guides, proposals, and reports.

Conduct research and ensure the use of proper technical terminology.

Coordinate project schedules, including participation in meetings; documentation and distribution of minutes and action items; and tracing action items for successful completion.

Edit functional descriptions, system specifications, user's manuals, special reports, or any other customer deliverables and documents.

Facilitate meetings and information sessions.

Maintain correspondence suspense files, records, files for reports, operating procedures, internal memorandums, and composes correspondence.

Plan and coordinate program management process activities such as Program Reviews and Control Gate Reviews including scheduling of meetings and preparation of briefings/presentations.

Provide documentation, requirements, and information updates.

Provide support such as technical writing, technical editing of word processing and other computer-based documents, integration of various sources into a cohesive product which may be delivered as computer based magnetic media, preparation of graphical and narrative presentation material.

Support task requiring the collecting, compiling, evaluating and publishing of information and statistical data in documents, records, forms, reports, plans, policies, and regulations.

Support the PM in resource leveling planning and analysis.

Knowledge, Skills, and Abilities

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Economics and Accounting — Knowledge of economic and accounting principles and practices, the financial markets, banking and the analysis and reporting of financial data.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Management of Personnel Resources — Motivating, developing, and directing people.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Personnel and Human Resources — Knowledge of principles and procedures for personnel recruitment, selection, training, compensation and benefits, labor relations and negotiation, and personnel information systems.

Production and Processing — Knowledge of raw materials, production processes, quality control, costs, and other techniques for maximizing the effective manufacture and distribution of goods.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Customer relationship management CRM software — ACT! software; Microsoft Dynamics CRM; Performance Solutions Technology ManagePro; Provisioning software

Data base management system software — AlphaFour software; Database management software; Microsoft SQL Server; Oracle software

Development environment software — Borland Delphi; C; Microsoft .NET Framework; Microsoft Visual Basic

Enterprise resource planning ERP software — Microsoft Dynamics AX; Microsoft Dynamics NAV; Oracle E-Business Suite; Oracle JD Edwards OneWorld

Web platform development software — Dynamic hypertext markup language DHTML; Hypertext markup language HTML; JavaScript; Scripting languages

Tools

Access servers — File servers

Computer servers — Mid-range computers; Netware servers; Storage servers; Web servers

Network interface cards — Network interface cards NIC

Peripheral controller cards — Industry standard architecture/peripheral component interconnect ISA/PCI cards

Print servers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Project Integrator - Full Performance

Skill Community: Enterprise IT

Labor Group: Project Management

Job Classification: Contractor

Status: Active

Date Effective: 5/30/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Gathers, analyzes, and composes technical information. Conducts research and ensures the use of proper technical terminology. Translates technical information into clear, readable documents and presentation to be used by technical and non-technical personnel. Supports the development of all types of documents and reports by developing and updating graphics presentations to improve the quality and enhance the usability of these documents. Responsible for integrating the graphics and information generated from meetings and facilitation sessions, using automated tools, and research methods into final deliverable documents.

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Customer relationship management CRM software — ACT! software; Microsoft Dynamics CRM; Performance Solutions Technology ManagePro; Provisioning software

Data base management system software — AlphaFour software; Database management software; Microsoft SQL Server; Oracle software

Development environment software — Borland Delphi; C; Microsoft .NET Framework; Microsoft Visual Basic

Enterprise resource planning ERP software — Microsoft Dynamics AX; Microsoft Dynamics NAV; Oracle E-Business Suite; Oracle JD Edwards OneWorld

Web platform development software — Dynamic hypertext markup language DHTML; Hypertext markup language HTML; JavaScript; Scripting languages

Tools

Access servers — File servers

Computer servers — Mid-range computers; Netware servers; Storage servers; Web servers

Network interface cards — Network interface cards NIC

Peripheral controller cards — Industry standard architecture/peripheral component interconnect ISA/PCI cards

Print servers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Requirements Specialist - Developmental

Skill Community: Enterprise IT

Labor Group: Computing Services

Job Classification: Contractor

Status: Active

Date Effective: 10/5/2012

Standard Occupational Code:
[15-1151] Computer User Support Specialists

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. This is work within the multi-level Requirements Specialist occupational specialty. Positions at this level provide in-depth requirement analysis, drafting and receiving approval for new requirements and may include final technical review and validation of requirements. Work includes overseeing requirements tracking, and collaborating with team, customers and service providers to identify requirements and changes that will fulfill the customer's need. These positions will stay abreast of new opportunities to implement customer-required changes. Depending upon assignment, may perform first-line supervisory duties.

Work is primarily sedentary and is performed in an office environment. Employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Work is primarily sedentary and is performed in an office environment. Employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Duties, Tasks, and Responsibilities

Collaborates with team, customers, and service providers or developers to identify requirements and stays abreast of new opportunities to implement.
- Establishes and maintains relationships with customers and partners in other components in order to understand and anticipate requirements.
- Identifies opportunities to integrate and improve resources to accomplish customer needs.

Depending upon assignment, may be responsible for managing, developing and evaluating subordinate staff.

Draft and/or performs vetting process of new requirements, making sure all information needed to complete a requirement is provided. Depending on assignment may
- Provide final technical review and validation of requirements
- Coordinate and facilitate exchange meetings or forums to determine needs of customers; consult with customer to clarify and validate complex requests if necessary.
- Coordinate and facilitate or provide substantive input to meetings to assist in the design and implementation of requirements and to determine the impact of changes and the possible technical solutions to business needs.
- Ensure all necessary approvals have been obtained such as Security, CIC, etc.
- Prepares requirements for review and acceptance by review boards.
- Review and/or assign requirements to appropriate service provider.
- May oversee tasking to service providers or developers within who implement the requirement.

Facilitates meetings with stakeholders to prioritize work to be done
- Work with developers to understand evolving systems.
- Draft concept papers, use cases, or white papers to capture future changes to the system.

Oversees requirements tracking process.
- May ensure all outstanding requests for requirements are tracked.
- May monitors submitted requirements and communicates status to customers.
- Interacts with service providers and customers to resolve complex concerns associated with pending and/or in-process requirements.
- Ensures follow-up with customers and providers; may verify completion of requirements with customers and service providers, ensuring expectations are properly met.
- May assist with the collection and reporting of requirements related metrics.

Knowledge, Skills, and Abilities

Ability to facilitate meetings; negotiates to help resolve problems.

Basic understanding of programmatic/engineering concepts.

Excellent customer service skills.

Excellent written and communication skills.

Knowledge of component requirements management systems.

Knowledge of service providers' functions.

Thorough understanding systems being used by customer and home office.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Requirements Specialist - Subject Matter Expert

Skill Community: Enterprise IT

Labor Group: Computing Services

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. This is work within the multi-level Requirements Specialist occupational specialty. Positions at this level provide in-depth requirement analysis, drafting and receiving approval for new requirements and may include final technical review and validation of requirements. Work includes overseeing requirements tracking, and collaborating with team, customers and service providers to identify requirements and changes that will fulfill the customer's need. These positions will stay abreast of new opportunities to implement customer-required changes. Depending upon assignment, may perform first-line supervisory duties.

Work is primarily sedentary and is performed in an office environment. Employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Short Summary:

Positions at this level provide in-depth requirement analysis, drafting and receiving approval for new requirements and may include final technical review and validation of requirements. Work includes overseeing requirements tracking, and collaborating with team, customers and service providers to identify requirements and changes that will fulfill the customer's need. These positions will stay abreast of new opportunities to implement customer-required changes. Depending upon assignment, may perform first-line supervisory duties.

Work is primarily sedentary and is performed in an office environment. Employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Duties, Tasks, and Responsibilities

Collaborates with team, customers, and service providers or developers to identify requirements and stays abreast of new opportunities to implement.
- Establishes and maintains relationships with customers and partners in other components in order to understand and anticipate requirements.
- Identifies opportunities to integrate and improve resources to accomplish customer needs.

Depending upon assignment, may be responsible for managing, developing and evaluating subordinate staff.

Draft and/or performs vetting process of new requirements, making sure all information needed to complete a requirement is provided. Depending on assignment may
- Provide final technical review and validation of requirements
- Coordinate and facilitate exchange meetings or forums to determine needs of customers; consult with customer to clarify and validate complex requests if necessary.
- Coordinate and facilitate or provide substantive input to meetings to assist in the design and implementation of requirements and to determine the impact of changes and the possible technical solutions to business needs.
- Ensure all necessary approvals have been obtained such as Security, CIC, etc.
- Prepares requirements for review and acceptance by review boards.
- Review and/or assign requirements to appropriate service provider.
- May oversee tasking to service providers or developers within who implement the requirement.

Facilitates meetings with stakeholders to prioritize work to be done
- Work with developers to understand evolving systems.
- Draft concept papers, use cases, or white papers to capture future changes to the system.

Oversees requirements tracking process.
- May ensure all outstanding requests for requirements are tracked.
- May monitors submitted requirements and communicates status to customers.
- Interacts with service providers and customers to resolve complex concerns associated with pending and/or in-process requirements.
- Ensures follow-up with customers and providers; may verify completion of requirements with customers and service providers, ensuring expectations are properly met.
- May assist with the collection and reporting of requirements related metrics.

Knowledge, Skills, and Abilities

Ability to facilitate meetings; negotiates to help resolve problems.

Basic understanding of programmatic/engineering concepts.

Excellent customer service skills.

Excellent written and communication skills.

Knowledge of component requirements management systems.

Knowledge of service providers' functions.

Thorough understanding systems being used by customer and home office.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Research and Operations Specialist - Developmental

Skill Community: Enterprise IT

Labor Group: Information Management

Job Classification: Contractor

Status: Active

Date Effective: 5/31/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab.

Positions at this level possess extensive knowledge of information systems and are skilled at exercising various research methodologies to conduct and manage research in support of name trace requests from DO and components and other government agencies or Freedom of Information Act (FOIA), Privacy Act (PA), Executive Order (EO) 12958 information requests, and declassification projects. Positions may construct search strategies, task appropriate components and/or more junior employees with conducting records searches, aggregate search information, analyze results, and write memoranda. Positions may be responsible for developing metrics and statistics to support information review and release programs. Positions may be first line supervisors or team leaders. Positions may require considerable knowledge of FOIA, PA, EO 12958, and policies and procedures governing the information review and release program and implementing directives related to classification, control markings, and declassification. Positions may also require considerable knowledge of Directorate/MSO-specific subject matters and corporate systems and repositories. In addition, positions are expected to maintain currency on technical job knowledge through attending courses, seminars and workshops.

Duties, Tasks, and Responsibilities

Aggregate search information and/or compile multiple document packages.

Analyze search results from often numerous and disparate sources to determine relevancy.

Assess the performance and skills of subordinates; provide performance and developmental feedback on an ongoing basis; provide input to formal performance appraisal.

Compile statistics.

Conduct and manage day-to-day research in support of information review and release programs or name trace requests from DO and components and other government agencies under general supervision.

Construct search strategies and conduct complex records searches.

Coordinate search results with branch chief, co-workers, and/or appropriate contacts in Directorates/MSOs and other government agencies.

Develop metrics and statistics to support information review and release programs under general supervision.

Establish performance objectives and standards; assist subordinates in setting individual goals.

Generate statistical, production, and other types of reports

Identify and document discrepancies or aberrations in search parameters, search results, and information release cases and projects.

Oversee the work of subordinates to ensure that work is performed in an accurate and timely fashion.

Perform other ad hoc duties as assigned.

Perform statistical analysis.

Prepare and conduct briefings.

Present search findings of varying complexity to branch chief and/or other internal and external customers.

Provide advice, guidance, and instruction to subordinates on information review and release processes and policies, workflow, and Directorate/MSO information management processes, policies and priorities.

Supervise and/or provide direction and guidance to developmental Research and Operations Specialists

Task appropriate components and/or more junior employees with conducting records searches.

Write memoranda and document complex search methodologies.

Knowledge, Skills, and Abilities

Considerable ability to discern intelligence, operational, and political sensitivities in official and other documents.

Considerable ability to establish and maintain effective working relationships with team members and regular contacts in other offices and government agencies, supplying or seeking information on specialized matters.

Considerable ability to manage multiple projects, and organize/schedule people and tasks

Considerable communication skills (oral and written) demonstrated by the ability to clearly present information through spoken or written word; ability to read and interpret complex information; ability to compose and edit research memoranda, policies, and recommendations; ability to prepare and deliver briefings to management and small groups of internal customers.

Considerable customer service skills demonstrated by anticipating and responding to customers' needs in a manner that provides added value and generates customer satisfaction, even in situations in which the outcome is not what the customer desired.

Considerable knowledge of Directorate/MSO-specific subject matters and information management policies and procedures

Considerable knowledge of the Freedom of Information Act, Privacy Act, Executive Order 12958, and policies and procedures governing the information review and release program and implementing directives related to classification, control markings, and declassification.

Considerable knowledge of the Intelligence Community and organizational structure, mission, and business functions

Considerable knowledge of the statutes, orders, and/or regulations governing information management and information security policies, procedures, and practices.

Considerable research and analytic skills demonstrated by identifying and securing relevant data; identifying key issues and relationships from a base of information; relating and comparing data from different sources and drawing conclusions supported by the data; transforming the data into a form that will make them easy to understand and interpret.

Demonstrated ability to structure and execute sophisticated search strategies on and external information systems.

Excellent organizational skills and attention to detail.

Expert knowledge of state of the art research methodologies.

Working knowledge of scanning, imaging, and indexing technologies.

Establish performance objectives and standards; assist subordinates in setting individual goals.

Generate statistical, production, and other types of reports

Identify and document discrepancies or aberrations in search parameters, search results, and information release cases and projects.

Oversee the work of subordinates to ensure that work is performed in an accurate and timely fashion.

Perform other ad hoc duties as assigned.

Perform statistical analysis.

Prepare and conduct briefings.

Present search findings of varying complexity to branch chief and/or other internal and external customers.

Provide advice, guidance, and instruction to subordinates on information review and release processes and policies, workflow, and Directorate/MSO information management processes, policies and priorities.

Supervise and/or provide direction and guidance to developmental Research and Operations Specialists

Task appropriate components and/or more junior employees with conducting records searches.

Write memoranda and document complex search methodologies.

Knowledge, Skills, and Abilities

Considerable ability to discern intelligence, operational, and political sensitivities in official and other documents.

Considerable ability to establish and maintain effective working relationships with team members and regular contacts in other offices and government agencies, supplying or seeking information on specialized matters.

Considerable ability to manage multiple projects, and organize/schedule people and tasks

Considerable communication skills (oral and written) demonstrated by the ability to clearly present information through spoken or written word; ability to read and interpret complex information; ability to compose and edit research memoranda, policies, and recommendations; ability to prepare and deliver briefings to management and small groups of internal customers.

Considerable customer service skills demonstrated by anticipating and responding to customers' needs in a manner that provides added value and generates customer satisfaction, even in situations in which the outcome is not what the customer desired.

Considerable knowledge of Directorate/MSO-specific subject matters and information management policies and procedures

Considerable knowledge of the Freedom of Information Act, Privacy Act, Executive Order 12958, and policies and procedures governing the information review and release program and implementing directives related to classification, control markings, and declassification.

Considerable knowledge of the Intelligence Community and organizational structure, mission, and business functions

Considerable knowledge of the statutes, orders, and/or regulations governing information management and information security policies, procedures, and practices.

Considerable research and analytic skills demonstrated by identifying and securing relevant data; identifying key issues and relationships from a base of information; relating and comparing data from different sources and drawing conclusions supported by the data; transforming the data into a form that will make them easy to understand and interpret.

Demonstrated ability to structure and execute sophisticated search strategies on and external information systems.

Excellent organizational skills and attention to detail.

Expert knowledge of state of the art research methodologies.

Working knowledge of scanning, imaging, and indexing technologies.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Tools

Desktop Computers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Research and Operations Specialist - Subject Matter Expert

Skill Community: Enterprise IT

Labor Group: Information Management

Job Classification: Contractor

Status: Active

Date Effective: 5/31/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Positions at this level possess extensive knowledge of information systems and are skilled at exercising various research methodologies to conduct and manage research in support of name trace requests from DO and components and other government agencies or Freedom of Information Act (FOIA), Privacy Act (PA), Executive Order (EO) 12958 information requests, and declassification projects. Positions may construct search strategies, task appropriate components and/or more junior employees with conducting records searches, aggregate search information, analyze results, and write memoranda. Positions may be responsible for developing metrics and statistics to support information review and release programs. Positions may be first line supervisors or team leaders. Positions may require considerable knowledge of FOIA, PA, EO 12958, and policies and procedures governing the information review and release program and implementing directives related to classification, control markings, and declassification. Positions may also require considerable knowledge of Directorate/MSO-specific subject matters and corporate systems and repositories. In addition, positions are expected to maintain currency on technical job knowledge through attending courses, seminars and workshops.

Short Summary:

Positions at this level possess extensive knowledge of information systems and are skilled at exercising various research methodologies to conduct and manage research in support of name trace requests from DO and components and other government agencies or Freedom of Information Act (FOIA), Privacy Act (PA), Executive Order (EO) 12958 information requests, and declassification projects. In addition, positions are expected to maintain currency on technical job knowledge through attending courses, seminars and workshops.

Duties, Tasks, and Responsibilities

Aggregate search information and/or compile multiple document packages.

Analyze search results from often numerous and disparate sources to determine relevancy.

Assess the performance and skills of subordinates; provide performance and developmental feedback on an ongoing basis; provide input to formal performance appraisal.

Compile statistics.

Conduct and manage day-to-day research in support of information review and release programs or name trace requests from DO and components and other government agencies under general supervision.

Construct search strategies and conduct complex records searches.

Coordinate search results with branch chief, co-workers, and/or appropriate contacts in Directorates/MSOs and other government agencies.

Develop metrics and statistics to support information review and release programs under general supervision.

Establish performance objectives and standards; assist subordinates in setting individual goals.

Generate statistical, production, and other types of reports

Identify and document discrepancies or aberrations in search parameters, search results, and information release cases and projects.

Oversee the work of subordinates to ensure that work is performed in an accurate and timely fashion.

Perform other ad hoc duties as assigned.

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Satellite Systems Engineer - Developmental

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Analyzes, consults and makes recommendations for specifying, acquiring, operating, and maintaining earth terminal satellite systems and satellite bandwidth.

Short Summary:
Analyzes, consults and makes recommendations for specifying, acquiring, operating, and maintaining earth terminal satellite systems and satellite bandwidth.

Duties, Tasks, and Responsibilities

Manages satellite frequency spectrum in conjunction with the satellite operator determining carrier frequency and carrier power based on parameters such as data rate, modulation scheme, satellite transmit power, and receive gain over temperature.

Monitors the power equivalent bandwidth utilization of satellite spectrum and report findings

Provides detailed recommendations based on analysis of satellite link calculations.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Documentation —Ability to draft requirements documents, correspondence and procedures in accordance with policies.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Equipment Selection — Determining the kind of tools and equipment needed to do a job.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Installation — Installing equipment, machines, wiring, or programs to meet specifications.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Network Analysis — Ability to utilize complex network analysis tools to resolve complex network performance problems.

Network Technology — Knowledge of theory and practice underlying satellite and LAN/WAN network operations.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — Ability to communicate information and ideas in speaking so others will understand.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Policies and Procedures — Knowledge of the CIO's policies and procedures relating to the design, upgrading, and operating and maintaining networks.

Presentation — Ability to write technical proposals for presentation to approval boards.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Procedures and Processes — Ability to provide explanations of complex technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Security — Knowledge of the 's Communications and Information Security policies and practices.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Technology — Ability to assess the technical characteristics of new operating capabilities proposed for inclusion in the network to determine potential impact on network performance.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Administration software — Cisco Systems CiscoWorks; Element management software; NetIQ software; SolarWinds software

Configuration management software — Application management software; Automated installation software; Patch and upgrade management software; Software distribution software

Network monitoring software — Ethereal; Ipswitch What's Up Gold; Multi-router traffic grapher MRTG software; Symantec Intruder Alert

Network security or virtual private network VPN management software — Intrusion prevention system IPS software; Network and system vulnerability assessment software; Risk assessment software; Virtual local area network management software

Transaction security and virus protection software — CA eTrust; Encryption software; Penetration testing software; Virus scanning software

Tools

Integrated services digital network ISDN testers — Integrated services digital network ISDN analyzers

Multimeters — Network multimeters

Network analyzers — Asynchronous transfer mode ATM analyzers; Bit error rate BER testers; Network connectivity testers; Wide area network WAN analyzers

Power meters — Fiber optic power meters

Protocol analyzers

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Administration software — Cisco Systems CiscoWorks; Element management software; NetIQ software; SolarWinds software

Configuration management software — Application management software; Automated installation software; Patch and upgrade management software; Software distribution software

Network monitoring software — Ethereal; Ipswitch What's Up Gold; Multi-router traffic grapher MRTG software; Symantec Intruder Alert

Network security or virtual private network VPN management software — Intrusion prevention system IPS software; Network and system vulnerability assessment software; Risk assessment software; Virtual local area network management software

Transaction security and virus protection software — CA eTrust; Encryption software; Penetration testing software; Virus scanning software

Tools

Integrated services digital network ISDN testers — Integrated services digital network ISDN analyzers

Multimeters — Network multimeters

Network analyzers — Asynchronous transfer mode ATM analyzers; Bit error rate BER testers; Network connectivity testers; Wide area network WAN analyzers

Power meters — Fiber optic power meters

Protocol analyzers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Satellite Systems Engineer - Full Performance

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Analyzes, consults and makes recommendations for specifying, acquiring, operating, and maintaining earth terminal satellite systems and satellite bandwidth.

Short Summary:

Analyzes, consults and makes recommendations for specifying, acquiring, operating, and maintaining earth terminal satellite systems and satellite bandwidth.

Duties, Tasks, and Responsibilities

Manages satellite frequency spectrum in conjunction with the satellite operator determining carrier frequency and carrier power based on parameters such as data rate, modulation scheme, satellite transmit power, and receive gain over temperature.

Monitors the power equivalent bandwidth utilization of satellite spectrum and report findings

Provides detailed recommendations based on analysis of satellite link calculations.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Documentation —Ability to draft requirements documents, correspondence and procedures in accordance with policies.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Equipment Selection — Determining the kind of tools and equipment needed to do a job.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Installation — Installing equipment, machines, wiring, or programs to meet specifications.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Network Analysis — Ability to utilize complex network analysis tools to resolve complex network performance problems.

Network Technology — Knowledge of theory and practice underlying satellite and LAN/WAN network operations.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — Ability to communicate information and ideas in speaking so others will understand.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Policies and Procedures — Knowledge of the CIO's policies and procedures relating to the design, upgrading, and operating and maintaining networks.

Presentation — Ability to write technical proposals for presentation to approval boards.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Procedures and Processes — Ability to provide explanations of complex technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Security — Knowledge of the 's Communications and Information Security policies and practices.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Technology — Ability to assess the technical characteristics of new operating capabilities proposed for inclusion in the network to determine potential impact on network performance.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. • An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Administration software — Cisco Systems CiscoWorks; Element management software; NetIQ software; SolarWinds software

Configuration management software — Application management software; Automated installation software; Patch and upgrade management software; Software distribution software

Network monitoring software — Ethereal; Ipswitch What's Up Gold; Multi-router traffic grapher MRTG software; Symantec Intruder Alert

Network security or virtual private network VPN management software — Intrusion prevention system IPS software; Network and system vulnerability assessment software; Risk assessment software; Virtual local area network management software

Transaction security and virus protection software — CA eTrust; Encryption software; Penetration testing software; Virus scanning software

Tools

Integrated services digital network ISDN testers — Integrated services digital network ISDN analyzers

Multimeters — Network multimeters

Network analyzers — Asynchronous transfer mode ATM analyzers; Bit error rate BER testers; Network connectivity testers; Wide area network WAN analyzers

Power meters — Fiber optic power meters

Protocol analyzers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Satellite Systems Network Engineer - Developmental

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Satellite Systems Network Engineer provides project management, engineering services and technical services for the Sponsor's satellite program. Provides general engineering support to the SATCOM network to meet the needs of Customer based programs/projects. Satellite network engineer is responsible for providing close support to the Sponsor's Commercial SATCOM Network and temporary duty travel support for both domestic and overseas locations, as required. Provides project management assistance on satellite projects/programs; assists in coordination of plans with other contractors for field engineering activities pertaining to the satellite network; provides input information on schedule, cost, risk mitigation, and WBS completion to the project management process; and provides close support to Sponsor's SATCOM databases, applications and tools.

Short Summary:

Satellite Systems Network Engineer provides project management, engineering services and technical services for the Sponsor's satellite program. Provides general engineering support to the SATCOM network to meet the needs of Customer based programs/projects. Satellite network engineer is responsible for providing close support to the Sponsor's Commercial SATCOM Network and temporary duty travel support for both domestic and overseas locations, as required. Provides project management assistance on satellite projects/programs; assists in coordination of plans with other contractors for field engineering activities pertaining to the satellite network; provides input information on schedule, cost, risk mitigation, and WBS completion to the project management process; and provides close support to Sponsor's SATCOM databases, applications and tools.

Duties, Tasks, and Responsibilities

Analyze and provide information on space segment lease cost, bandwidth requirements, and frequency management for the DTS SATCOM Network.

Analyze systemic and/or network failures in the field and provide recommendations for solution to the failures.

Assist in the licensing and Host Nation Approval process for Field and Entry Terminals.

Assist the DTA instructors with the development of training courses for commercial terminal operations and maintenance personnel.

Attend technical committees meetings as a Sponsor's Representative.

Compile yearly input for the DSCS and WGS Satellite Database (SDB) submission to the Joint Chiefs of Staff (JCS).

Conduct a market survey to determine what commercial industry Best Practices are for storage and retrieval of satellite information.

Coordinate and implement Enterprise Satellite Solutions (ESS) network changes with DTS relay facilities.

Coordinate and implement network changes with regional relay facilities (RRFs).

Develop a requirements suite for a single database application based on the market survey.

Develop concepts for satellite database structures and content that allows convenient access to existing satellite analysis tools (e.g.; DCMS, X-Band Model: SATCALCS.) as used by the Sponsor.

Develop frequency and transponder loading plans to meet current and near-term requirements.

Develop technical specifications for all Sponsor's commercial SATCOM link solicitations.

Develop, prepare, and organize documentation for inclusion in a commercial satellite terminal training course.

Identify entry/node requirements within regions to support point-to-point data/voice traffic.

Identify required space segment, commercial teleports, and terrestrial communications segments.

Identify test and evaluation requirements for terminal hardware, as required.

Interface with industry vendors as required.

Investigate options for procurement of commercial bulk bandwidth procurements.

Maintain Sponsor's various SATCOM databases as network changes are implemented.

Maintain standards for satellite database access control and auditing; implement database access control to allow browsing and report generation by Government and Contractor personnel.

Maintain standards for satellite databases organization and access; implement the integration of existing satellite databases for MILSATCOM and commercial satellite networks into a single, coherent database structure.

Maintain 's SATCOM databases as network changes are implemented.

Manage the Interim Feasibility Request (IFR) database (requests for DSCS, WGS and XTAR access.)

Perform analysis and evaluation of vendors' technical proposals for commercial SATCOM links and provide the evaluation results to the government.

Perform periodic market surveys to identify emerging SATCOM technologies.

Prepare technical reports, drawings, graphs, and other technical documentation, as required, in support of the SATCOM network.

Produce satellite link analyses and calculations for the DTS SATCOM network. Produce frequency and modulation analyses. Provide satellite update ephemeris information for the DSCS, WGS and XTAR geosynchronous satellites used by DTS-PO.

Promulgate official telegraphic correspondence for network changes as required.

Provide recommendations for improving satellite network performance.

Provide satellite update ephemeris information for the commercial geosynchronous satellites used by the DTS SATCOM Network.

Provision Ad hoc training support for technical instruction in satellite communications systems. This task includes informal on-the-job training for junior engineers and technicians in the theoretical and practice aspects of satellite communications.

Review ESS Support Vendor test plans and procedures for evaluating satellite earth terminal equipment.

Support testing of vendor products, systems, etc to assure compliance with specifications.

Support the implementation of a web-based command monitor and alarm (CMA) application accessible across the enterprise and by DTS Partners.

Support the implementation of new satellite link modeling application and associated databases to maintain the application.

Track and report allocation metrics to include satellite power and bandwidth utilization and throughput statistics.

Track on a routine basis the correlation between 's SATCOM models and real-time measurement tools. Compare with Department of Defense's (DOD's) measurement tools (i.e., TLS, etc).

Troubleshoot problems with existing applications, tools, and databases, including Microsoft Access, Excel, Acquisitions Request database, the Satellite Terminals database and other specialized databases used within the Sponsor's program to monitor and/or manage satellite communications, terminal configurations, installation requirements, transponder loading, and available bandwidth of the DTS SATCOM Network.

Utilize 's SATCOM network management tools to include; the Replacement Carrier Measurement System (RCMS), the Corporate Carrier Measurement System (CCMS), Network Management and Control System, and Modem Monitoring.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Documentation —Ability to draft requirements documents, correspondence and procedures in accordance with policies.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Equipment Selection — Determining the kind of tools and equipment needed to do a job.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Installation — Installing equipment, machines, wiring, or programs to meet specifications.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Network Analysis — Ability to utilize complex network analysis tools to resolve complex network performance problems.

Network Technology — Knowledge of theory and practice underlying satellite and LAN/WAN network operations.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — Ability to communicate information and ideas in speaking so others will understand.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Policies and Procedures — Knowledge of the CIO's policies and procedures relating to the design, upgrading, and operating and maintaining networks.

Presentation — Ability to write technical proposals for presentation to approval boards.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Procedures and Processes — Ability to provide explanations of complex technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Security — Knowledge of the 's Communications and Information Security policies and practices.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Technology — Ability to assess the technical characteristics of new operating capabilities proposed for inclusion in the network to determine potential impact on network performance.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Administration software — Cisco Systems CiscoWorks; Element management software; NetIQ software; SolarWinds software

Configuration management software — Application management software; Automated installation software; Patch and upgrade management software; Software distribution software

Network monitoring software — Ethereal; Ipswitch What's Up Gold; Multi-router traffic grapher MRTG software; Symantec Intruder Alert

Network security or virtual private network VPN management software — Intrusion prevention system IPS software; Network and system vulnerability assessment software; Risk assessment software; Virtual local area network management software

Transaction security and virus protection software — CA eTrust; Encryption software; Penetration testing software; Virus scanning software

Tools

Integrated services digital network ISDN testers — Integrated services digital network ISDN analyzers

Multimeters — Network multimeters

Network analyzers — Asynchronous transfer mode ATM analyzers; Bit error rate BER testers; Network connectivity testers; Wide area network WAN analyzers

Power meters — Fiber optic power meters

Protocol analyzers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Utilize 's SATCOM network management tools to include; the Replacement Carrier Measurement System (RCMS), the Corporate Carrier Measurement System (CCMS), Network Management and Control System, and Modem Monitoring.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Documentation —Ability to draft requirements documents, correspondence and procedures in accordance with policies.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Equipment Selection — Determining the kind of tools and equipment needed to do a job.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Installation — Installing equipment, machines, wiring, or programs to meet specifications.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Network Analysis — Ability to utilize complex network analysis tools to resolve complex network performance problems.

Network Technology — Knowledge of theory and practice underlying satellite and LAN/WAN network operations.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — Ability to communicate information and ideas in speaking so others will understand.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Policies and Procedures — Knowledge of the CIO's policies and procedures relating to the design, upgrading, and operating and maintaining networks.

Presentation — Ability to write technical proposals for presentation to approval boards.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Procedures and Processes — Ability to provide explanations of complex technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Security — Knowledge of the 's Communications and Information Security policies and practices.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Technology — Ability to assess the technical characteristics of new operating capabilities proposed for inclusion in the network to determine potential impact on network performance.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Administration software — Cisco Systems CiscoWorks; Element management software; NetIQ software; SolarWinds software

Configuration management software — Application management software; Automated installation software; Patch and upgrade management software; Software distribution software

Network monitoring software — Ethereal; Ipswitch What's Up Gold; Multi-router traffic grapher MRTG software; Symantec Intruder Alert

Network security or virtual private network VPN management software — Intrusion prevention system IPS software; Network and system vulnerability assessment software; Risk assessment software; Virtual local area network management software

Transaction security and virus protection software — CA eTrust; Encryption software; Penetration testing software; Virus scanning software

Tools

Integrated services digital network ISDN testers — Integrated services digital network ISDN analyzers

Multimeters — Network multimeters

Network analyzers — Asynchronous transfer mode ATM analyzers; Bit error rate BER testers; Network connectivity testers; Wide area network WAN analyzers

Power meters — Fiber optic power meters

Protocol analyzers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Satellite Systems Network Engineer - Manager

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Satellite Systems Network Engineer provides project management, engineering services and technical services for the Sponsor's satellite program. Provides general engineering support to the SATCOM network to meet the needs of Customer based programs/projects. Satellite network engineer is responsible for providing close support to the Sponsor's Commercial SATCOM Network and temporary duty travel support for both domestic and overseas locations, as required. Provides project management assistance on satellite projects/programs; assists in coordination of plans with other contractors for field engineering activities pertaining to the satellite network; provides input information on schedule, cost, risk mitigation, and WBS completion to the project management process; and provides close support to Sponsor's SATCOM databases, applications and tools.

Short Summary:

Satellite Systems Network Engineer provides project management, engineering services and technical services for the Sponsor's satellite program. Provides general engineering support to the SATCOM network to meet the needs of Customer based programs/projects. Satellite network engineer is responsible for providing close support to the Sponsor's Commercial SATCOM Network and temporary duty travel support for both domestic and overseas locations, as required. Provides project management assistance on satellite projects/programs; assists in coordination of plans with other contractors for field engineering activities pertaining to the satellite network; provides input information on schedule, cost, risk mitigation, and WBS completion to the project management process; and provides close support to Sponsor's SATCOM databases, applications and tools.

Duties, Tasks, and Responsibilities

Analyze and provide information on space segment lease cost, bandwidth requirements, and frequency management for the DTS SATCOM Network.

Analyze systemic and/or network failures in the field and provide recommendations for solution to the failures.

Assist in the licensing and Host Nation Approval process for Field and Entry Terminals.

Assist the DTA instructors with the development of training courses for commercial terminal operations and maintenance personnel.

Attend technical committees meetings as a Sponsor's Representative.

Compile yearly input for the DSCS and WGS Satellite Database (SDB) submission to the Joint Chiefs of Staff (JCS).

Conduct a market survey to determine what commercial industry Best Practices are for storage and retrieval of satellite information.

Coordinate and implement Enterprise Satellite Solutions (ESS) network changes with DTS relay facilities.

Coordinate and implement network changes with regional relay facilities (RRFs).

Develop a requirements suite for a single database application based on the market survey.

Develop concepts for satellite database structures and content that allows convenient access to existing satellite analysis tools (e.g.; DCMS, X-Band Model: SATCALCS.) as used by the Sponsor.

Develop frequency and transponder loading plans to meet current and near-term requirements.

Develop technical specifications for all Sponsor's commercial SATCOM link solicitations.

Develop, prepare, and organize documentation for inclusion in a commercial satellite terminal training course.

Identify entry/node requirements within regions to support point-to-point data/voice traffic.

Identify required space segment, commercial teleports, and terrestrial communications segments.

Identify test and evaluation requirements for terminal hardware, as required.

Interface with industry vendors as required.

Investigate options for procurement of commercial bulk bandwidth procurements.

Maintain Sponsor's various SATCOM databases as network changes are implemented.

Maintain standards for satellite database access control and auditing; implement database access control to allow browsing and report generation by Government and Contractor personnel.

Maintain standards for satellite databases organization and access; implement the integration of existing satellite databases for MILSATCOM and commercial satellite networks into a single, coherent database structure.

Maintain 's SATCOM databases as network changes are implemented.

Manage the Interim Feasibility Request (IFR) database (requests for DSCS, WGS and XTAR access.)

Perform analysis and evaluation of vendors' technical proposals for commercial SATCOM links and provide the evaluation results to the government.

Perform periodic market surveys to identify emerging SATCOM technologies.

Prepare technical reports, drawings, graphs, and other technical documentation, as required, in support of the SATCOM network.

Produce satellite link analyses and calculations for the DTS SATCOM network. Produce frequency and modulation analyses. Provide satellite update ephemeris information for the DSCS, WGS and XTAR geosynchronous satellites used by DTS-PO.

Promulgate official telegraphic correspondence for network changes as required.

Provide recommendations for improving satellite network performance.

Provide satellite update ephemeris information for the commercial geosynchronous satellites used by the DTS SATCOM Network.

Provision Ad hoc training support for technical instruction in satellite communications systems. This task includes informal on-the-job training for junior engineers and technicians in the theoretical and practice aspects of satellite communications.

Review ESS Support Vendor test plans and procedures for evaluating satellite earth terminal equipment.

Support testing of vendor products, systems, etc to assure compliance with specifications.

Support the implementation of a web-based command monitor and alarm (CMA) application accessible across the enterprise and by DTS Partners.

Support the implementation of new satellite link modeling application and associated databases to maintain the application.

Track and report allocation metrics to include satellite power and bandwidth utilization and throughput statistics.

Track on a routine basis the correlation between 's SATCOM models and real-time measurement tools. Compare with Department of Defense's (DOD's) measurement tools (i.e., TLS, etc).

Troubleshoot problems with existing applications, tools, and databases, including Microsoft Access, Excel, Acquisitions Request database, the Satellite Terminals database and other specialized databases used within the Sponsor's program to monitor and/or manage satellite communications, terminal configurations, installation requirements, transponder loading, and available bandwidth of the DTS SATCOM Network.

Utilize 's SATCOM network management tools to include; the Replacement Carrier Measurement System (RCMS), the Corporate Carrier Measurement System (CCMS), Network Management and Control System, and Modem Monitoring.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Documentation —Ability to draft requirements documents, correspondence and procedures in accordance with policies.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Equipment Selection — Determining the kind of tools and equipment needed to do a job.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Installation — Installing equipment, machines, wiring, or programs to meet specifications.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Network Analysis — Ability to utilize complex network analysis tools to resolve complex network performance problems.

Network Technology — Knowledge of theory and practice underlying satellite and LAN/WAN network operations.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — Ability to communicate information and ideas in speaking so others will understand.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Policies and Procedures — Knowledge of the CIO's policies and procedures relating to the design, upgrading, and operating and maintaining networks.

Presentation — Ability to write technical proposals for presentation to approval boards.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Procedures and Processes — Ability to provide explanations of complex technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Security — Knowledge of the 's Communications and Information Security policies and practices.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Technology — Ability to assess the technical characteristics of new operating capabilities proposed for inclusion in the network to determine potential impact on network performance.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

Short Summary:

Satellite Systems Network Engineer provides project management, engineering services and technical services for the Sponsor's satellite program. Provides general engineering support to the SATCOM network to meet the needs of Customer based programs/projects. Satellite network engineer is responsible for providing close support to the Sponsor's Commercial SATCOM Network and temporary duty travel support for both domestic and overseas locations, as required. Provides project management assistance on satellite projects/programs; assists in coordination of plans with other contractors for field engineering activities pertaining to the satellite network; provides input information on schedule, cost, risk mitigation, and WBS completion to the project management process; and provides close support to Sponsor's SATCOM databases, applications and tools.

Duties, Tasks, and Responsibilities

Analyze and provide information on space segment lease cost, bandwidth requirements, and frequency management for the DTS SATCOM Network.

Analyze systemic and/or network failures in the field and provide recommendations for solution to the failures.

Assist in the licensing and Host Nation Approval process for Field and Entry Terminals.

Assist the DTA instructors with the development of training courses for commercial terminal operations and maintenance personnel.

Attend technical committees meetings as a Sponsor's Representative.

Compile yearly input for the DSCS and WGS Satellite Database (SDB) submission to the Joint Chiefs of Staff (JCS).

Conduct a market survey to determine what commercial industry Best Practices are for storage and retrieval of satellite information.

Coordinate and implement Enterprise Satellite Solutions (ESS) network changes with DTS relay facilities.

Coordinate and implement network changes with regional relay facilities (RRFs).

Develop a requirements suite for a single database application based on the market survey.

Develop concepts for satellite database structures and content that allows convenient access to existing satellite analysis tools (e.g.; DCMS, X-Band Model: SATCALCS.) as used by the Sponsor.

Develop frequency and transponder loading plans to meet current and near-term requirements.

Develop technical specifications for all Sponsor's commercial SATCOM link solicitations.

Develop, prepare, and organize documentation for inclusion in a commercial satellite terminal training course.

Identify entry/node requirements within regions to support point-to-point data/voice traffic.

Identify required space segment, commercial teleports, and terrestrial communications segments.

Identify test and evaluation requirements for terminal hardware, as required.

Interface with industry vendors as required.

Investigate options for procurement of commercial bulk bandwidth procurements.

Maintain Sponsor's various SATCOM databases as network changes are implemented.

Maintain standards for satellite database access control and auditing; implement database access control to allow browsing and report generation by Government and Contractor personnel.

Maintain standards for satellite databases organization and access; implement the integration of existing satellite databases for MILSATCOM and commercial satellite networks into a single, coherent database structure.

Maintain 's SATCOM databases as network changes are implemented.

Manage the Interim Feasibility Request (IFR) database (requests for DSCS, WGS and XTAR access.)

Perform analysis and evaluation of vendors' technical proposals for commercial SATCOM links and provide the evaluation results to the government.

Perform periodic market surveys to identify emerging SATCOM technologies.

Prepare technical reports, drawings, graphs, and other technical documentation, as required, in support of the SATCOM network.

Produce satellite link analyses and calculations for the DTS SATCOM network. Produce frequency and modulation analyses. Provide satellite update ephemeris information for the DSCS, WGS and XTAR geosynchronous satellites used by DTS-PO.

Promulgate official telegraphic correspondence for network changes as required.

Provide recommendations for improving satellite network performance.

Provide satellite update ephemeris information for the commercial geosynchronous satellites used by the DTS SATCOM Network.

Provision Ad hoc training support for technical instruction in satellite communications systems. This task includes informal on-the-job training for junior engineers and technicians in the theoretical and practice aspects of satellite communications.

Review ESS Support Vendor test plans and procedures for evaluating satellite earth terminal equipment.

Support testing of vendor products, systems, etc to assure compliance with specifications.

Support the implementation of a web-based command monitor and alarm (CMA) application accessible across the enterprise and by DTS Partners.

Support the implementation of new satellite link modeling application and associated databases to maintain the application.

Track and report allocation metrics to include satellite power and bandwidth utilization and throughput statistics.

Track on a routine basis the correlation between 's SATCOM models and real-time measurement tools. Compare with Department of Defense's (DOD's) measurement tools (i.e., TLS, etc).

Troubleshoot problems with existing applications, tools, and databases, including Microsoft Access, Excel, Acquisitions Request database, the Satellite Terminals database and other specialized databases used within the Sponsor's program to monitor and/or manage satellite communications, terminal configurations, installation requirements, transponder loading, and available bandwidth of the DTS SATCOM Network.

Utilize 's SATCOM network management tools to include; the Replacement Carrier Measurement System (RCMS), the Corporate Carrier Measurement System (CCMS), Network Management and Control System, and Modem Monitoring.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Documentation —Ability to draft requirements documents, correspondence and procedures in accordance with policies.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Equipment Selection — Determining the kind of tools and equipment needed to do a job.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Installation — Installing equipment, machines, wiring, or programs to meet specifications.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Network Analysis — Ability to utilize complex network analysis tools to resolve complex network performance problems.

Network Technology — Knowledge of theory and practice underlying satellite and LAN/WAN network operations.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — Ability to communicate information and ideas in speaking so others will understand.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Policies and Procedures — Knowledge of the CIO's policies and procedures relating to the design, upgrading, and operating and maintaining networks.

Presentation — Ability to write technical proposals for presentation to approval boards.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Procedures and Processes — Ability to provide explanations of complex technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Security — Knowledge of the 's Communications and Information Security policies and practices.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Technology — Ability to assess the technical characteristics of new operating capabilities proposed for inclusion in the network to determine potential impact on network performance.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Administration software — Cisco Systems CiscoWorks; Element management software; NetIQ software; SolarWinds software

Configuration management software — Application management software; Automated installation software; Patch and upgrade management software; Software distribution software

Network monitoring software — Ethereal; Ipswitch What's Up Gold; Multi-router traffic grapher MRTG software; Symantec Intruder Alert

Network security or virtual private network VPN management software — Intrusion prevention system IPS software; Network and system vulnerability assessment software; Risk assessment software; Virtual local area network management software

Transaction security and virus protection software — CA eTrust; Encryption software; Penetration testing software; Virus scanning software

Tools

Integrated services digital network ISDN testers — Integrated services digital network ISDN analyzers

Multimeters — Network multimeters

Network analyzers — Asynchronous transfer mode ATM analyzers; Bit error rate BER testers; Network connectivity testers; Wide area network WAN analyzers

Power meters — Fiber optic power meters

Protocol analyzers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Server Operations Specialist - Developmental

Skill Community: Enterprise IT

Labor Group: Computing Services

Job Classification: Contractor

Status: Active

Date Effective: 10/5/2012

Standard Occupational Code:
[15-1150] Computer Support Specialists
[15-1150] Computer Support Specialists

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Positions perform routine computer operations and maintenance (O&M) tasks and/or work on operating systems software and its successful integration with the hardware and applications software. These positions could provide 24x7 operational support depending on position requirements within the organization. Additionally, positions independently research and resolve routine O&M problems; assist in the resolution of complex O&M problems; execute standard operating procedures (SOPs) and schedules for O&M activities; and may provide written input into the development and documentation of SOPs and schedules for O&M activities. Dependent on the job, specialists may assist in the integration, installation, testing and maintenance of specific software relating system environments. With engineering guidance, positions install new server software components using established procedures; maintenance of operating configurations and software configurations.

Dependent on the job, specialists may assist in the integration, installation, testing and maintenance of specific software relating system environments. With engineering guidance, positions install new server software components using established procedures; maintenance of operating configurations and software configurations.

Duties, Tasks, and Responsibilities

Assists in base lining and forecasting server performance data and tuning server hardware and software configurations.

Assists in monitoring the performance of system files, utilizes system-monitoring software.

Assists in server performance tuning.

Assists with complex installations of hardware and software components.

Assists with first tier support to storage area network and enterprise storage systems.

Assists with server and storage capacity planning for the most critical systems; performs server and storage capacity planning for non-complex systems.

Assists with troubleshooting of complex installation problems.

Contacts decentralized customer support teams, help desks, customers & other technical professional staffs and support organizations to inform them of issues and/or resolution of routine and moderately complex server problems.

Installs standard server hardware and software components following established procedures, with guidance

Maintains and updates written SOPs and schedules for routine O&M activities; may provide input for the development of new or complex SOPs and schedules for O&M activities.

Performs and assists in supporting the O&M activities for all centrally managed work group servers.

Performs routine and standard server operations (e.g., software deliveries, hardware installations and upgrades, preventive maintenance, and basic troubleshooting) using established procedures.

Researches and resolves routine O&M problems; assists in resolving complex problems.

Serves on installation teams providing assistance in the installation of server hardware and software components, as requested.

Knowledge, Skills, and Abilities

Prepares daily Server Operations Activity Report and Server Outage Report for ECG/Chief, Operations Branch.

Represents Server Operations branches at the Operations Scheduling Panel (OSP) meeting held on Monday and Thursday of each week.

Represents Server Operations branches at the daily 0830 and 1600 Operations Status Meetings.

Responds to questions about server outages and server activities to Chief, Operations Branch and to Senior Service Managers (SSM).

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Tools

Desktop computers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Server Operations Specialist - Senior

Skill Community: Enterprise IT

Labor Group: Computing Services

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Positions perform routine computer operations and maintenance (O&M) tasks and/or work on operating systems software and its successful integration with the hardware and applications software. These positions could provide 24x7 operational support depending on position requirements within the organization. Additionally, positions independently research and resolve routine O&M problems; assist in the resolution of complex O&M problems; execute standard operating procedures (SOPs) and schedules for O&M activities; and may provide written input into the development and documentation of SOPs and schedules for O&M activities. Dependent on the job, specialists may assist in the integration, installation, testing and maintenance of specific software relating system environments. With engineering guidance, positions install new server software components using established procedures; maintenance of operating configurations and software configurations.

Short Summary:

Positions perform routine computer operations and maintenance (O&M) tasks and/or work on operating systems software and its successful integration with the hardware and applications software. These positions could provide 24x7 operational support depending on position requirements within the organization. Additionally, positions independently research and resolve routine O&M problems; assist in the resolution of complex O&M problems; execute standard operating procedures (SOPs) and schedules for O&M activities; and may provide written input into the development and documentation of SOPs and schedules for O&M activities. Dependent on the job, specialists may assist in the integration, installation, testing and maintenance of specific software relating system environments. With engineering guidance, positions install new server software components using established procedures; maintenance of operating configurations and software configurations.

Duties, Tasks, and Responsibilities

Assists in base lining and forecasting server performance data and tuning server hardware and software configurations.

Assists in monitoring the performance of system files, utilizes system-monitoring software.

Assists in server performance tuning.

Assists with complex installations of hardware and software components.

Assists with first tier support to storage area network and enterprise storage systems.

Assists with server and storage capacity planning for the most critical systems; performs server and storage capacity planning for non-complex systems.

Assists with troubleshooting of complex installation problems.

Contacts decentralized customer support teams, help desks, customers & other technical professional staffs and support organizations to inform them of issues and/or resolution of routine and moderately complex server problems.

Installs standard server hardware and software components following established procedures, with guidance

Maintains and updates written SOPs and schedules for routine O&M activities; may provide input for the development of new or complex SOPs and schedules for O&M activities.

Performs and assists in supporting the O&M activities for all centrally managed work group servers.

Performs routine and standard server operations (e.g., software deliveries, hardware installations and upgrades, preventive maintenance, and basic troubleshooting) using established procedures.

Researches and resolves routine O&M problems; assists in resolving complex problems.

Serves on installation teams providing assistance in the installation of server hardware and software components, as requested.

Knowledge, Skills, and Abilities

Prepares daily Server Operations Activity Report and Server Outage Report for ECG/Chief, Operations Branch.

Represents Server Operations branches at the Operations Scheduling Panel (OSP) meeting held on Monday and Thursday of each week.

Represents Server Operations branches at the daily 0830 and 1600 Operations Status Meetings.

Responds to questions about server outages and server activities to Chief, Operations Branch and to Senior Service Managers (SSM).

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.

• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

SharePoint Developer - Developmental

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Provides development engineering support and programming support to projects and infrastructure support activities. Designs and develops enterprise applications in a Web environment. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyzes user needs and develop software solutions. Designs software or customize software for client use with the aim of optimizing operational efficiency. May analyze and design databases within an application area, working individually or coordinating database development as part of a team. May manage websites including design, develop, deploy and maintain activities as well as performs testing and quality assurance of web sites and web applications.

Converts project specifications and statements of problems and procedures to detailed logical flow charts for coding into computer language. Develops and writes computer programs to store, locate, and retrieve specific documents, data, and information. Analyzes functional business applications and design specifications for functional activities. Develops codes, tests, and debugs new software or enhancements to existing software. Performs maintenance on existing software products and contributes knowledge of business applications. Writes programs according to specifications needed. Provides technical support in the evaluation of prime object names, data elements, and other objects. Ensures that proposed object definitions are clear, concise, technically correct, and that they represent singular concepts. Ensures that the proposed objects are consistent with data and process models. Works with the technical staff to understand problems had with software and then resolve them. Resolves customer complaints with the software and responds to suggestions for improvements and enhancements. Develops block diagrams and logic flow charts. Prepares required documentation.

Analyzes functional business applications and design specifications for functional areas such as payroll, logistics, and contracts. Develops high level and detailed design diagrams using appropriate Computer Aided Software Engineering (CASE) tools. Translates detailed design into computer software. Tests, debugs, and refines the computer software to produce the required product. Prepares required documentation, including both program-level and user-level documentation. Enhances software to reduce operating time or improve efficiency. Provides technical direction to programmers as required to ensure program deadlines are met. Monitors and supports computer processing. Coordinates input, output, and file media. Distributes output and controls computer operation.

Short Summary:

Provides development engineering support and programming support to projects and infrastructure support activities. Designs and develops enterprise applications in a Web environment. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyzes user needs and develop software solutions. Designs software or customize software for client use with the aim of optimizing operational efficiency.

Duties, Tasks, and Responsibilities

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Assign, coordinate, and review work and activities of programming personnel.

Collaborate with computer manufacturers and other users to develop new programming methods.

Compile and write documentation of program development and subsequent revisions, inserting comments in the coded instructions so others can understand the program.

Conduct trial runs of programs and software applications to be sure they will produce the desired information and that the instructions are correct.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with and assist computer operators or system analysts to define and resolve problems in running computer programs.

Consult with customers about software system design and maintenance.

Consult with managerial, engineering, and technical personnel to clarify program intent, identify problems, and suggest changes.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Correct errors by making appropriate changes and then recheck the program to ensure that the desired results are produced.

Design and develop database management systems, image processing, collaborative tools, data manipulation techniques, data visualization techniques, and directory services

Design and develop tools for the MS Windows and relevant operating system platforms.

Design and develop tools that integrate with commercial applications.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop unit and functional test plan.

Investigate whether networks, workstations, the central processing unit of the system, or peripheral equipment are responding to a program's instructions.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Perform or direct revision, repair, or expansion of existing programs to increase operating efficiency or adapt to new requirements.

Prepare detailed workflow charts and diagrams that describe input, output, and logical operation, and convert them into a series of instructions coded in a computer language.

Provide database architectural and design capabilities.

Provide the operations and maintenance of operational systems.

Train subordinates in programming and program coding

Write or contribute to instructions or manuals to guide end users.

Write, analyze, review, and rewrite programs, using workflow chart and diagram, and applying knowledge of computer capabilities, subject matter, and symbolic logic.

Write, update, and maintain computer programs or software packages to handle specific jobs, such as tracking inventory, storing or retrieving data, or controlling other equipment.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematical Reasoning — The ability to choose the right mathematical methods or formulas to solve a problem.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Mathematics — Using mathematics to solve problems.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Database management system software — Database management software; Distributed database management software; Microsoft SQL Server; Microsoft transact-structural query language T-SQL

Development environment software — C; Extensible Stylesheet Language Transformation XLST; IBM Rational Rose XDE Developer D93; Microsoft Visual Basic

Object or component oriented development software — C++; Document Object Model DOM Scripting; Simple API for XML SAX; Sun Microsystems Java

Operating system software — Job control language JCL; Unix; VxWorks software; Win CE

Program testing software — Defect tracking software; Fault testing software; IBM Rational ClearQuest; Mercury Interactive LoadRunner

Tools

Desktop computers

High end computer servers — Application servers; Directory servers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Database management system software — Database management software; Distributed database management software; Microsoft SQL Server; Microsoft transact-structural query language T-SQL

Development environment software — C; Extensible Stylesheet Language Transformation XLST; IBM Rational Rose XDE Developer D93; Microsoft Visual Basic

Object or component oriented development software — C++; Document Object Model DOM Scripting; Simple API for XML SAX; Sun Microsystems Java

Operating system software — Job control language JCL; Unix; VxWorks software; Win CE

Program testing software — Defect tracking software; Fault testing software; IBM Rational ClearQuest; Mercury Interactive LoadRunner

Tools

Desktop computers

High end computer servers — Application servers; Directory servers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

SharePoint Developer - Full Performance

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Provides development engineering support and programming support to projects and infrastructure support activities. Designs and develops enterprise applications in a Web environment. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyzes user needs and develop software solutions. Designs software or customize software for client use with the aim of optimizing operational efficiency. May analyze and design databases within an application area, working individually or coordinating database development as part of a team. May manage websites including design, develop, deploy and maintain activities as well as performs testing and quality assurance of web sites and web applications.

Converts project specifications and statements of problems and procedures to detailed logical flow charts for coding into computer language. Develops and writes computer programs to store, locate, and retrieve specific documents, data, and information. Analyzes functional business applications and design specifications for functional activities. Develops codes, tests, and debugs new software or enhancements to existing software. Performs maintenance on existing software products and contributes knowledge of business applications. Writes programs according to specifications needed. Provides technical support in the evaluation of prime object names, data elements, and other objects. Ensures that proposed object definitions are clear, concise, technically correct, and that they represent singular concepts. Ensures that the proposed objects are consistent with data and process models. Works with the technical staff to understand problems had with software and then resolve them. Resolves customer complaints with the software and responds to suggestions for improvements and enhancements.   Develops block diagrams and logic flow charts. Prepares required documentation.

Analyzes functional business applications and design specifications for functional areas such as payroll, logistics, and contracts. Develops high level and detailed design diagrams using appropriate Computer Aided Software Engineering (CASE) tools. Translates detailed design into computer software. Tests, debugs, and refines the computer software to produce the required product. Prepares required documentation, including both program-level and user-level documentation. Enhances software to reduce operating time or improve efficiency. Provides technical direction to programmers as required to ensure program deadlines are met. Monitors and supports computer processing. Coordinates input, output, and file media. Distributes output and controls computer operation.

Short Summary:

Provides development engineering support and programming support to projects and infrastructure support activities. Designs and develops enterprise applications in a Web environment. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyzes user needs and develop software solutions. Designs software or customize software for client use with the aim of optimizing operational efficiency.

Duties, Tasks, and Responsibilities

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Assign, coordinate, and review work and activities of programming personnel.

Collaborate with computer manufacturers and other users to develop new programming methods.

Compile and write documentation of program development and subsequent revisions, inserting comments in the coded instructions so others can understand the program.

Conduct trial runs of programs and software applications to be sure they will produce the desired information and that the instructions are correct.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with and assist computer operators or system analysts to define and resolve problems in running computer programs.

Consult with customers about software system design and maintenance.

Consult with managerial, engineering, and technical personnel to clarify program intent, identify problems, and suggest changes.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Correct errors by making appropriate changes and then recheck the program to ensure that the desired results are produced.

Design and develop database management systems, image processing, collaborative tools, data manipulation techniques, data visualization techniques, and directory services

Design and develop tools for the MS Windows and relevant operating system platforms.

Design and develop tools that integrate with commercial applications.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop unit and functional test plan.

Investigate whether networks, workstations, the central processing unit of the system, or peripheral equipment are responding to a program's instructions.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Perform or direct revision, repair, or expansion of existing programs to increase operating efficiency or adapt to new requirements.

Prepare detailed workflow charts and diagrams that describe input, output, and logical operation, and convert them into a series of instructions coded in a computer language.

Provide database architectural and design capabilities.

Provide the operations and maintenance of operational systems.

Train subordinates in programming and program coding

Write or contribute to instructions or manuals to guide end users.

Write, analyze, review, and rewrite programs, using workflow chart and diagram, and applying knowledge of computer capabilities, subject matter, and symbolic logic.

Write, update, and maintain computer programs or software packages to handle specific jobs, such as tracking inventory, storing or retrieving data, or controlling other equipment.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematical Reasoning — The ability to choose the right mathematical methods or formulas to solve a problem.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Mathematics — Using mathematics to solve problems.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Database management system software — Database management software; Distributed database management software; Microsoft SQL Server; Microsoft transact-structural query language T-SQL

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Database management system software — Database management software; Distributed database management software; Microsoft SQL Server; Microsoft transact-structural query language T-SQL

Development environment software — C; Extensible Stylesheet Language Transformation XLST; IBM Rational Rose XDE Developer D93; Microsoft Visual Basic

Object or component oriented development software — C++; Document Object Model DOM Scripting; Simple API for XML SAX; Sun Microsystems Java

Operating system software — Job control language JCL; Unix; VxWorks software; Win CE

Program testing software — Defect tracking software; Fault testing software; IBM Rational ClearQuest; Mercury Interactive LoadRunner

Tools

Desktop computers

High end computer servers — Application servers; Directory servers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

SharePoint Developer - Subject Matter Expert

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab.

Provides development engineering support and programming support to projects and infrastructure support activities. Designs and develops enterprise applications in a Web environment. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyzes user needs and develop software solutions. Designs software or customize software for client use with the aim of optimizing operational efficiency. May analyze and design databases within an application area, working individually or coordinating database development as part of a team. May manage websites including design, develop, deploy and maintain activities as well as performs testing and quality assurance of web sites and web applications.

Converts project specifications and statements of problems and procedures to detailed logical flow charts for coding into computer language. Develops and writes computer programs to store, locate, and retrieve specific documents, data, and information. Analyzes functional business applications and design specifications for functional activities. Develops codes, tests, and debugs new software or enhancements to existing software. Performs maintenance on existing software products and contributes knowledge of business applications. Writes programs according to specifications needed. Provides technical support in the evaluation of prime object names, data elements, and other objects. Ensures that proposed object definitions are clear, concise, technically correct, and that they represent singular concepts. Ensures that the proposed objects are consistent with data and process models. Works with the technical staff to understand problems had with software and then resolve them. Resolves customer complaints with the software and responds to suggestions for improvements and enhancements.   Develops block diagrams and logic flow charts. Prepares required documentation.

Analyzes functional business applications and design specifications for functional areas such as payroll, logistics, and contracts. Develops high level and detailed design diagrams using appropriate Computer Aided Software Engineering (CASE) tools. Translates detailed design into computer software. Tests, debugs, and refines the computer software to produce the required product. Prepares required documentation, including both program-level and user-level documentation. Enhances software to reduce operating time or improve efficiency. Provides technical direction to programmers as required to ensure program deadlines are met. Monitors and supports computer processing. Coordinates input, output, and file media. Distributes output and controls computer operation.

Short Summary:
Provides development engineering support and programming support to projects and infrastructure support activities. Designs and develops enterprise applications in a Web environment. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyzes user needs and develop software solutions. Designs software or customize software for client use with the aim of optimizing

operational efficiency.

Duties, Tasks, and Responsibilities

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Assign, coordinate, and review work and activities of programming personnel.

Collaborate with computer manufacturers and other users to develop new programming methods.

Compile and write documentation of program development and subsequent revisions, inserting comments in the coded instructions so others can understand the program.

Conduct trial runs of programs and software applications to be sure they will produce the desired information and that the instructions are correct.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with and assist computer operators or system analysts to define and resolve problems in running computer programs.

Consult with customers about software system design and maintenance.

Consult with managerial, engineering, and technical personnel to clarify program intent, identify problems, and suggest changes.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Correct errors by making appropriate changes and then recheck the program to ensure that the desired results are produced.

Design and develop database management systems, image processing, collaborative tools, data manipulation techniques, data visualization techniques, and directory services

Design and develop tools for the MS Windows and relevant operating system platforms.

Design and develop tools that integrate with commercial applications.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop unit and functional test plan.

Investigate whether networks, workstations, the central processing unit of the system, or peripheral equipment are responding to a program's instructions.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Perform or direct revision, repair, or expansion of existing programs to increase operating efficiency or adapt to new requirements.

Prepare detailed workflow charts and diagrams that describe input, output, and logical operation, and convert them into a series of instructions coded in a computer language.

Provide database architectural and design capabilities.

Provide the operations and maintenance of operational systems.

Train subordinates in programming and program coding

Write or contribute to instructions or manuals to guide end users.

Write, analyze, review, and rewrite programs, using workflow chart and diagram, and applying knowledge of computer capabilities, subject matter, and symbolic logic.

Write, update, and maintain computer programs or software packages to handle specific jobs, such as tracking inventory, storing or retrieving data, or controlling other equipment.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematical Reasoning — The ability to choose the right mathematical methods or formulas to solve a problem.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Mathematics — Using mathematics to solve problems.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.

• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Database management system software — Database management software; Distributed database management software; Microsoft SQL Server; Microsoft transact-structural query language T-SQL

Development environment software — C; Extensible Stylesheet Language Transformation XLST; IBM Rational Rose XDE Developer D93; Microsoft Visual Basic

Analyze user needs and software requirements to determine feasibility of design within time and cost restraints

Assign, coordinate, and review work and activities of programming personnel

Collaborate with computer manufacturers and users to develop new programming methods

Compile and write documentation of program development and subsequent revisions, inserting comments in the coded instruction so others can understand the program

Conduct trial runs of program and software applications to be sure they will produce the desired information and that the instructions are correct

Confer with systems analysts, engineers, programmers and others to obtain information on project limitations and capabilities, performance requirements and interfaces

Consult with and assist computer operators or system analysts to define and resolve problems in running computer programs

Consult with customers about software system design and maintenance

Consult with managerial, engineering, and technical personnel to clarify program intent, identify problems, and suggest changes

Coordinate software system installation and monitor equipment functioning to ensure specifications are met

Correct errors by making appropriate changes and then recheck the program to ensure that the desired results are produced

Design and develop database management systems, image processing, collaborative tools, data manipulation techniques, data visualization techniques, and directory services

Design and develop tools for the MS Windows and relevant operating system platforms

Design and develop tools that integrate with commercial applications

Design, develop, and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequence of design

Develop and direct software system testing and validation procedures, programming, and documentation

Develop unit and functional test plan

Investigate whether networks, workstations, the central processing unit of the system, or peripheral equipment are responding to a program's instructions

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance

Perform or direct revision, repair, or expansion of existing programs to increase operating efficiency or adapt to new requirements

Prepare detailed workflow charts and diagrams that describe input, output, and logical operational, and convert them into a series of instructions coded in a computer language

Provide database architectural and design capabilities

Provide the operations and maintenance of operational systems

Train subordinates in programming and program coding

Write or contribute to instructions or manuals to guide end users

Write, update, and maintain computer programs or software packages to handle specific jobs, such as tracking inventory, storing or receiving data, or controlling other equipment

Written, analyze, review, and rewrite programs, using workflow chart and diagram, and applying knowledge of computer capabilities, subject matter, and symbolic logic

Knowledge, Skills, and Abilities

Complex Problem Solving – identifying complex problems and reviewing related information to develop and evaluate options and implement new ones.

Computers and electronics – Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Customer and personal service – knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Engineering and technology – knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

Mathematics – knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Metadata management software – ALL fusion Erwin data Modeler; Data Modeling Software; IBM Rational Data Architect; Visual paradigm DM Visual ARCHITECT
Object or component oriented development software – Microsoft Visual C#.NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase Power Builder.

Tools

Desktop Computers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Software Developer (Systems Software) - Manager

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Provides development engineering and programming support to projects and infrastructure support activities. Designs and develops enterprise applications in a Web environment. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyzes user needs and develops software solutions. Designs software or customizes software for client use with the aim of optimizing operational efficiency. May analyze and design databases within an application area, working individually or coordinating database development as part of a team. May manage websites including design, develop, deploy and maintain activities as well as performs testing and quality assurance of web sites and web applications.
Coverts project specification and statements of problems and procedures to detailed logical flow charts for coding into computer language. Develops and writes computer programs to store, locate, and retrieve specific documents, data, and information. Analyzes functional business applications and design specifications for functional activities. Develops codes, tests, and debugs new software or enhancements to existing software. Performs maintenance on existing software products and contributes knowledge of business applications. Writes programs according to specifications needed. Provides technical support in the evaluation of prime object names, data elements, and other objects. Ensures that proposed object definitions are clear, concise, technically correct, and that they represent singular concepts. Ensures that the proposed objects are consistent with data and process models. Works with the technical staff to understand problems had with software and then resolve them. Resolves customer complaints with the software and responds to suggestions for improvements and enhancements. Develops block diagrams and logic flow charts. Prepares required documentation.

Short Summary:

Provides development engineering and programming support to projects and infrastructure support activities. Designs and develops enterprise applications in a Web environment. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyzes user needs and develops software solutions. Software Engineer - Developmental

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 10/6/2012

Standard Occupational Code:
 [15-1133] Software Developers, Systems Software
 [15-1133] Software Developers, Systems Software

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyze user needs and develop software solutions. Designs software or customizes software for client use with the aim of optimizing operational efficiency. May analyze and design databases within an application area, working individually or coordinating database development as part of a team. Researches, designs, develops, and tests operating systems-level software, compilers, and network distribution software for industrial, military, communications, aerospace, business, scientific, and general computing applications. Sets operational specifications and formulate and analyze software requirements. Apply principles and techniques of computer science, engineering, and mathematical analysis.

Analyzes and develops computer systems possessing a wide range of capabilities, including numerous engineering, business and records management functions. Develops plans for automated information systems from project inception to conclusion including systems requirements determination. Designs software tools and subsystems to support software reuse and domain analyses and manages their implementation. Manages software development and support using formal specifications, data flow diagrams, other accepted design techniques and Computer Aided Software Engineering (CASE) tools. Analyzes user interfaces, maintain hardware and software performance tuning, analyze workload and computer usage, maintain interfaces with outside systems, analyze downtimes, analyze proposed system modifications, upgrades and new COTS. Defines the problem, and develops system requirements and program specifications, from which programmers prepare detailed flow charts, programs, and tests. Coordinates closely with programmers to ensure proper implementation of program and system specifications. Develops, in conjunction with functional users, system alternative solutions.

Short Summary:

Analyzes user interfaces, maintain hardware and software performance tuning, analyze workload and computer usage, maintain interfaces with outside systems, analyze downtimes, analyze proposed system modifications, upgrades and new COTS. Defines the problem, and develops system requirements and program specifications, from which programmers prepare detailed flow charts, programs, and tests. Coordinates closely with programmers to ensure proper implementation of program and system specifications. Develops, in conjunction with functional users, system alternative solutions.

Duties, Tasks, and Responsibilities

  Advise customer about, or perform, maintenance of software system.

Analyze information to determine, recommend, and plan computer specifications and layouts, and peripheral equipment modifications.

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Confer with data processing and project managers to obtain information on limitations and capabilities for data processing projects.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with customers about software system design and maintenance.

Consult with customers or other departments on project status, proposals and technical issues such as software system design and maintenance.

Consult with engineering staff to evaluate interface between hardware and software, develop specifications and performance requirements and resolve customer problems.

Coordinate installation of software system.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop and direct software system testing and validation procedures.

Estimate software development costs and schedule.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Monitor functioning of equipment to ensure system operates in conformance with specifications.

Obtain and evaluate information on factors such as reporting formats required, costs, and security needs to determine hardware configuration.

Prepare reports and correspondence concerning project specifications, activities and status.

Review existing programs and assist in making refinements, reducing operating time, and improve current techniques.

Specify power supply requirements and configuration.

Store, retrieve, and manipulate data for analysis of system capabilities and requirements.

Supervise the work of programmers, technologists and technicians and other engineering and scientific personnel.

Train users to use new or modified equipment.

Utilize microcontrollers to develop control signals, implement control algorithms and measure process variables such as temperatures, pressures and positions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Data base management system software — Computer Associates integrated data management system CA-IDMS; Database management software; Microsoft SQL Server; Oracle DBMS

Development environment software — C; Embedded systems development software; IBM Rational Rose XDE Developer; Microsoft Visual Basic

Object or component oriented development software — C++; Self; Simulation language SIMULA; Sun Microsystems Java

Program testing software — Defect tracking software; Mercury Interactive LoadRunner; Source code editor software; Usability testing software

Web platform development software — Apache Struts; Hypertext markup language HTML; JavaScript; Ruby on Rails

Tools

Desktop computers

High end computer servers — Application servers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Software Engineer - Expert

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyze user needs and develop software solutions. Designs software or customizes software for client use with the aim of optimizing operational efficiency. May analyze and design databases within an application area, working individually or coordinating database development as part of a team. Researches, designs, develops, and tests operating systems-level software, compilers, and network distribution software for industrial, military, communications, aerospace, business, scientific, and general computing applications. Sets operational specifications and formulate and analyze software requirements. Apply principles and techniques of computer science, engineering, and mathematical analysis.
Analyzes and develops computer systems possessing a wide range of capabilities, including numerous engineering, business and records management functions. Develops plans for automated information systems from project inception to conclusion including systems requirements determination. Designs software tools and subsystems to support software reuse and domain analyses and manages their implementation. Manages software development and support using formal specifications, data flow diagrams, other accepted design techniques and Computer Aided Software Engineering (CASE) tools. Analyzes user interfaces, maintain hardware and software performance tuning, analyze workload and computer usage, maintain interfaces with outside systems, analyze downtimes, analyze proposed system modifications, upgrades and new COTS. Defines the problem, and develops system requirements and program specifications, from which programmers prepare detailed flow charts, programs, and tests. Coordinates closely with programmers to ensure proper implementation of program and system specifications. Develops, in conjunction with functional users, system alternative solutions.

Short Summary:

Analyzes user interfaces, maintain hardware and software performance tuning, analyze workload and computer usage, maintain interfaces with outside systems, analyze downtimes, analyze proposed system modifications, upgrades and new COTS. Defines the problem, and develops system requirements and program specifications, from which programmers prepare detailed flow charts, programs, and tests. Coordinates closely with programmers to ensure proper implementation of program and system specifications. Develops, in conjunction with functional users, system alternative solutions.

Duties, Tasks, and Responsibilities

Advise customer about, or perform, maintenance of software system.

Analyze information to determine, recommend, and plan computer specifications and layouts, and peripheral equipment modifications.

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Confer with data processing and project managers to obtain information on limitations and capabilities for data processing projects.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with customers about software system design and maintenance.

Consult with customers or other departments on project status, proposals and technical issues such as software system design and maintenance.

Consult with engineering staff to evaluate interface between hardware and software, develop specifications and performance requirements and resolve customer problems.

Coordinate installation of software system.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop and direct software system testing and validation procedures.

Estimate software development costs and schedule.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Monitor functioning of equipment to ensure system operates in conformance with specifications.

Obtain and evaluate information on factors such as reporting formats required, costs, and security needs to determine hardware configuration.

Prepare reports and correspondence concerning project specifications, activities and status.

Review existing programs and assist in making refinements, reducing operating time, and improve current techniques.

Specify power supply requirements and configuration.

Store, retrieve, and manipulate data for analysis of system capabilities and requirements.

Supervise the work of programmers, technologists and technicians and other engineering and scientific personnel.

Train users to use new or modified equipment.

Utilize microcontrollers to develop control signals, implement control algorithms and measure process variables such as temperatures, pressures and positions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Data base management system software — Computer Associates integrated data management system CA-IDMS; Database management software; Microsoft SQL Server; Oracle DBMS

Development environment software — C; Embedded systems development software; IBM Rational Rose XDE Developer; Microsoft Visual Basic

Object or component oriented development software — C++; Self; Simulation language SIMULA; Sun Microsystems Java

Duties, Tasks, and Responsibilities

Advise customer about, or perform, maintenance of software system.

Analyze information to determine, recommend, and plan computer specifications and layouts, and peripheral equipment modifications.

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Confer with data processing and project managers to obtain information on limitations and capabilities for data processing projects.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with customers about software system design and maintenance.

Consult with customers or other departments on project status, proposals and technical issues such as software system design and maintenance.

Consult with engineering staff to evaluate interface between hardware and software, develop specifications and performance requirements and resolve customer problems.

Coordinate installation of software system.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop and direct software system testing and validation procedures.

Estimate software development costs and schedule.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Monitor functioning of equipment to ensure system operates in conformance with specifications.

Obtain and evaluate information on factors such as reporting formats required, costs, and security needs to determine hardware configuration.

Prepare reports and correspondence concerning project specifications, activities and status.

Review existing programs and assist in making refinements, reducing operating time, and improve current techniques.

Specify power supply requirements and configuration.

Store, retrieve, and manipulate data for analysis of system capabilities and requirements.

Supervise the work of programmers, technologists and technicians and other engineering and scientific personnel.

Train users to use new or modified equipment.

Utilize microcontrollers to develop control signals, implement control algorithms and measure process variables such as temperatures, pressures and positions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-salving and decision-making.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Data base management system software — Computer Associates integrated data management system CA-IDMS; Database management software; Microsoft SQL Server; Oracle DBMS

Development environment software — C; Embedded systems development software; IBM Rational Rose XDE Developer; Microsoft Visual Basic

Object or component oriented development software — C++; Self; Simulation language SIMULA; Sun Microsystems Java

Program testing software — Defect tracking software; Mercury Interactive LoadRunner; Source code editor software; Usability testing software

Web platform development software — Apache Struts; Hypertext markup language HTML; JavaScript; Ruby on Rails

Tools

Desktop computers

High end computer servers — Application servers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Software Engineer - Senior

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyze user needs and develop software solutions. Designs software or customizes software for client use with the aim of optimizing operational efficiency. May analyze and design databases within an application area, working individually or coordinating database development as part of a team. Researches, designs, develops, and tests operating systems-level software, compilers, and network distribution software for industrial, military, communications, aerospace, business, scientific, and general computing applications. Sets operational specifications and formulate and analyze software requirements. Apply principles and techniques of computer science, engineering, and mathematical analysis.
Analyzes and develops computer systems possessing a wide range of capabilities, including numerous engineering, business and records management functions. Develops plans for automated information systems from project inception to conclusion including systems requirements determination. Designs software tools and subsystems to support software reuse and domain analyses and manages their implementation. Manages software development and support using formal specifications, data flow diagrams, other accepted design techniques and Computer Aided Software Engineering (CASE) tools. Analyzes user interfaces, maintain hardware and software performance tuning, analyze workload and computer usage, maintain interfaces with outside systems, analyze downtimes, analyze proposed system modifications, upgrades and new COTS. Defines the problem, and develops system requirements and program specifications, from which programmers prepare detailed flow charts, programs, and tests. Coordinates closely with programmers to ensure proper implementation of program and system specifications. Develops, in conjunction with functional users, system alternative solutions.

Short Summary:

Analyzes user interfaces, maintain hardware and software performance tuning, analyze workload and computer usage, maintain interfaces with outside systems, analyze downtimes, analyze proposed system modifications, upgrades and new COTS. Defines the problem, and develops system requirements and program specifications, from which programmers prepare detailed flow charts, programs, and tests. Coordinates closely with programmers to ensure proper implementation of program and system specifications. Develops, in conjunction with functional users, system alternative solutions.

Duties, Tasks, and Responsibilities

Advise customer about, or perform, maintenance of software system.

Analyze information to determine, recommend, and plan computer specifications and layouts, and peripheral equipment modifications.

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Confer with data processing and project managers to obtain information on limitations and capabilities for data processing projects.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with customers about software system design and maintenance.

Consult with customers or other departments on project status, proposals and technical issues such as software system design and maintenance.

Consult with engineering staff to evaluate interface between hardware and software, develop specifications and performance requirements and resolve customer problems.

Coordinate installation of software system.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop and direct software system testing and validation procedures.

Estimate software development costs and schedule.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Monitor functioning of equipment to ensure system operates in conformance with specifications.

Obtain and evaluate information on factors such as reporting formats required, costs, and security needs to determine hardware configuration.

Prepare reports and correspondence concerning project specifications, activities and status.

Review existing programs and assist in making refinements, reducing operating time, and improve current techniques.

Specify power supply requirements and configuration.

Store, retrieve, and manipulate data for analysis of system capabilities and requirements.

Supervise the work of programmers, technologists and technicians and other engineering and scientific personnel.

Train users to use new or modified equipment.

Utilize microcontrollers to develop control signals, implement control algorithms and measure process variables such as temperatures, pressures and positions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Data base management system software — Computer Associates integrated data management system CA-IDMS; Database management software; Microsoft SQL Server; Oracle DBMS

Development environment software — C; Embedded systems development software; IBM Rational Rose XDE Developer; Microsoft Visual Basic

Object or component oriented development software — C++; Self; Simulation language SIMULA; Sun Microsystems Java

Program testing software — Defect tracking software; Mercury Interactive LoadRunner; Source code editor software; Usability testing software

Web platform development software — Apache Struts; Hypertext markup language HTML; JavaScript; Ruby on Rails

• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Software Quality Assurance Specialist/Applications Tester - Developmental

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 10/6/2012

Standard Occupational Code:
 [15-1199] Computer Occupations, All Other

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Develops and implements quality control methodologies to ensure compliance with quality assurance standards, guidelines, and procedures in a large computer-based organization. Develops and executes software test plans in order to identify software problems and their causes. Establishes and maintains a process for evaluating hardware, software, and associated documentation and/or assists in the evaluation.   Conducts and/or participates in formal and informal reviews at pre-determined points throughout the development life cycle

Short Summary:
Develops and implements quality control methodologies to ensure compliance with quality assurance standards, guidelines, and procedures in a large computer-based organization. Develops and executes software test plans in order to identify software problems and their causes. Establishes and maintains a process for evaluating hardware, software, and associated documentation and/or assists in the evaluation. Conducts and/or participates in formal and informal reviews at pre-determined points throughout the development life cycle

Duties, Tasks, and Responsibilities

Assist the sponsor in the evaluation of software and associated documentation.

Collaborate with field staff or customers to evaluate or diagnose problems and recommend possible solutions.

Conduct historical analyses of test results.

Conduct software compatibility tests with programs, hardware, operating systems, or network environments.

Coordinate user or third party testing.

Create or maintain databases of known test defects.

Design or develop automated testing tools.

Design test plans, scenarios, scripts, or procedures.

Develop and defines major and minor characteristics of quality including quality metrics and scoring parameters and determines requisite quality control resources.

Develop or specify standards, methods, or procedures to determine product quality or release readiness.

Develop testing programs that address areas such as database impacts, software scenarios, regression testing, negative testing, error or bug retests, or usability.

Document software defects, using a bug tracking system, and report defects to software developers.

Document test procedures to ensure replicability and compliance with standards.

Evaluate or recommend software for testing or bug tracking.

Identify program deviance from standards, and suggest modifications to ensure compliance.

Identify, analyze, and document problems with program function, output, online screen, or content.

Install and configure recreations of software production environments to allow testing of software performance.

Install, maintain, or use software testing programs.

Investigate customer problems referred by technical support.

Monitor bug resolution efforts and track successes.

Monitor program performance to ensure efficient and problem-free operations.

Participate in formal and informal reviews to determine quality.

Participate in product design reviews to provide input on functional requirements, product designs, schedules, or potential problems.

Perform initial debugging procedures by reviewing configuration files, logs, or code pieces to determine breakdown source.

Plan test schedules or strategies in accordance with project scope or delivery dates.

Provide feedback and recommendations to developers on software usability and functionality.

Provide technical support during software installation or configuration.

Review software documentation to ensure technical accuracy, compliance, or completeness, or to mitigate risks.

Test system modifications to prepare for implementation.

Update automated test scripts to ensure currency.

Visit beta testing sites to evaluate software performance.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Quality Control Analysis — Conducting tests and inspections of products, services, or processes to evaluate quality or performance.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Time Management — Managing one's own time and the time of others.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Quality Control Analysis — Conducting tests and inspections of products, services, or processes to evaluate quality or performance.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Time Management — Managing one's own time and the time of others.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Development environment software — Apache Ant; CruiseControl *; JetBrains IntelliJ IDEA; Microsoft Visual Basic

Object or component oriented development software — Acresso InstallAnywhere; Apple Cocoa; Objective-C; Practical extraction and reporting language Perl

Operating system software — Linux; UNIX; VMWare Workstation; Wind River Systems VxWorks

Program testing software — Borland SilkTest; JUnit; Watir *; YourKit Java Profiler

Web platform development software — Apache Tomcat; Hypertext markup language HTML; JavaScript; Microsoft ASP.NET

Tools

Computer servers — Application servers

Desktop computers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Mainframe computers — Supercomputers

Notebook computers — Laptop computers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Software Quality Assurance Specialist/Applications Tester - Full Performance

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Develops and implements quality control methodologies to ensure compliance with quality assurance standards, guidelines, and procedures in a large computer-based organization. Develops and executes software test plans in order to identify software problems and their causes. Establishes and maintains a process for evaluating hardware, software, and associated documentation and/or assists in the evaluation.   Conducts and/or participates in formal and informal reviews at pre-determined points throughout the development life cycle

Short Summary:

Develops and implements quality control methodologies to ensure compliance with quality assurance standards, guidelines, and procedures in a large computer-based organization. Develops and executes software test plans in order to identify software problems and their causes. Establishes and maintains a process for evaluating hardware, software, and associated documentation and/or assists in the evaluation. Conducts and/or participates in formal and informal reviews at pre-determined points throughout the development life cycle

Duties, Tasks, and Responsibilities

Assist the sponsor in the evaluation of software and associated documentation.

Collaborate with field staff or customers to evaluate or diagnose problems and recommend possible solutions.

Conduct historical analyses of test results.

Conduct software compatibility tests with programs, hardware, operating systems, or network environments.

Coordinate user or third party testing.

Create or maintain databases of known test defects.

Design or develop automated testing tools.

Design test plans, scenarios, scripts, or procedures.

Develop and defines major and minor characteristics of quality including quality metrics and scoring parameters and determines requisite quality control resources.

Develop or specify standards, methods, or procedures to determine product quality or release readiness.

Develop testing programs that address areas such as database impacts, software scenarios, regression testing, negative testing, error or bug retests, or usability.

Document software defects, using a bug tracking system, and report defects to software developers.

Document test procedures to ensure replicability and compliance with standards.

Evaluate or recommend software for testing or bug tracking.

Identify program deviance from standards, and suggest modifications to ensure compliance.

Identify, analyze, and document problems with program function, output, online screen, or content.

Install and configure recreations of software production environments to allow testing of software performance.

Install, maintain, or use software testing programs.

Investigate customer problems referred by technical support.

Monitor bug resolution efforts and track successes.

Monitor program performance to ensure efficient and problem-free operations.

Participate in formal and informal reviews to determine quality.

Participate in product design reviews to provide input on functional requirements, product designs, schedules, or potential problems.

Perform initial debugging procedures by reviewing configuration files, logs, or code pieces to determine breakdown source.

Plan test schedules or strategies in accordance with project scope or delivery dates.

Provide feedback and recommendations to developers on software usability and functionality.

Provide technical support during software installation or configuration.

Review software documentation to ensure technical accuracy, compliance, or completeness, or to mitigate risks.

Test system modifications to prepare for implementation.

Update automated test scripts to ensure currency.

Visit beta testing sites to evaluate software performance.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Quality Control Analysis — Conducting tests and inspections of products, services, or processes to evaluate quality or performance.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Time Management — Managing one's own time and the time of others.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Create or maintain databases of known test defects.

Design or develop automated testing tools.

Design test plans, scenarios, scripts, or procedures.

Develop and defines major and minor characteristics of quality including quality metrics and scoring parameters and determines requisite quality control resources.

Develop or specify standards, methods, or procedures to determine product quality or release readiness.

Develop testing programs that address areas such as database impacts, software scenarios, regression testing, negative testing, error or bug retests, or usability.

Document software defects, using a bug tracking system, and report defects to software developers.

Document test procedures to ensure replicability and compliance with standards.

Evaluate or recommend software for testing or bug tracking.

Identify program deviance from standards, and suggest modifications to ensure compliance.

Identify, analyze, and document problems with program function, output, online screen, or content.

Install and configure recreations of software production environments to allow testing of software performance.

Install, maintain, or use software testing programs.

Investigate customer problems referred by technical support.

Monitor bug resolution efforts and track successes.

Monitor program performance to ensure efficient and problem-free operations.

Participate in formal and informal reviews to determine quality.

Participate in product design reviews to provide input on functional requirements, product designs, schedules, or potential problems.

Perform initial debugging procedures by reviewing configuration files, logs, or code pieces to determine breakdown source.

Plan test schedules or strategies in accordance with project scope or delivery dates.

Provide feedback and recommendations to developers on software usability and functionality.

Provide technical support during software installation or configuration.

Review software documentation to ensure technical accuracy, compliance, or completeness, or to mitigate risks.

Test system modifications to prepare for implementation.

Update automated test scripts to ensure currency.

Visit beta testing sites to evaluate software performance.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Quality Control Analysis — Conducting tests and inspections of products, services, or processes to evaluate quality or performance.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Time Management — Managing one's own time and the time of others.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Development environment software — Apache Ant; CruiseControl *; JetBrains IntelliJ IDEA; Microsoft Visual Basic

Object or component oriented development software — Acresso InstallAnywhere; Apple Cocoa; Objective-C; Practical extraction and reporting language Perl

Operating system software — Linux; UNIX; VMWare Workstation; Wind River Systems VxWorks

Program testing software — Borland SilkTest; JUnit; Watir *; YourKit Java Profiler

Web platform development software — Apache Tomcat; Hypertext markup language HTML; JavaScript; Microsoft ASP.NET

Tools

Computer servers — Application servers

Desktop computers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Mainframe computers — Supercomputers

Notebook computers — Laptop computers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Software Systems Specialist - Developmental

Skill Community: Enterprise IT

Labor Group: Computing Services

Job Classification: Contractor

Status: Active

Date Effective: 10/5/2012

Standard Occupational Code:
[15-1133] Software Developers, Systems Software
[15-1133] Software Developers, Systems Software

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Provides application development-programming for projects and infrastructure support activities. Designs and develops enterprise applications in a Web environment. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyzes user needs and develop software solutions. Designs software or customize software for client use with the aim of optimizing operational efficiency. May analyze and design databases within an application area, working individually or coordinating database development as part of a team. May manage websites including design, develop, deploy and maintain activities as well as performs testing and quality assurance of web sites and web applications.

Converts project specifications and statements of problems and procedures to detailed logical flow charts for coding into computer language. Develops and writes computer programs to store, locate, and retrieve specific documents, data, and information. Analyzes functional business applications and design specifications for functional activities. Develops codes, tests, and debugs new software or enhancements to existing software. Performs maintenance on existing software products and contributes knowledge of business applications. Writes programs according to specifications needed. Provide technical support in the evaluation of prime object names, data elements, and other objects. Ensure that proposed object definitions are clear, concise, technically correct, and that they represent singular concepts. Ensure that the proposed objects are consistent with data and process models. Works with the technical staff to understand problems had with software and then resolve them. Resolves customer complaints with the software and responds to suggestions for improvements and enhancements.   Develops block diagrams and logic flow charts.

Short Summary:
Provides application development-programming for projects and infrastructure support activities. Designs and develops enterprise applications in a Web environment. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyzes user needs and develop software solutions. Designs software or customize software for client use with the aim of optimizing operational efficiency. May analyze and design databases within an application area, working individually or coordinating database development as part of a team. May manage websites including design, develop, deploy and maintain activities as well as performs testing and quality assurance of web sites and web applications....

Duties, Tasks, and Responsibilities

Analyze user needs and software requirements to determine feasibility of design within time and cost

constraints.

Assign, coordinate, and review work and activities of programming personnel.

Collaborate with computer manufacturers and other users to develop new programming methods.

Compile and write documentation of program development and subsequent revisions, inserting comments in the coded instructions so others can understand the program.

Conduct trial runs of programs and software applications to be sure they will produce the desired information and that the instructions are correct.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with and assist computer operators or system analysts to define and resolve problems in running computer programs.

Consult with customers about software system design and maintenance.

Consult with managerial, engineering, and technical personnel to clarify program intent, identify problems, and suggest changes.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Correct errors by making appropriate changes and then recheck the program to ensure that the desired results are produced.

Design and develop database management systems, image processing, collaborative tools, data manipulation techniques, data visualization techniques, and directory services.

Design and develop tools for the MS Windows and relevant operating system platforms.

Design and develop tools that integrate with commercial applications.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop unit and functional test plan.

Investigate whether networks, workstations, the central processing unit of the system, or peripheral equipment are responding to a program's instructions.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Perform or direct revision, repair, or expansion of existing programs to increase operating efficiency or adapt to new requirements.

Prepare detailed workflow charts and diagrams that describe input, output, and logical operation, and convert them into a series of instructions coded in a computer language.

Provide database architectural and design capabilities.

Provide the operations and maintenance of operational systems.

Train subordinates in programming and program coding.

Write or contribute to instructions or manuals to guide end users.

Write, analyze, review, and rewrite programs, using workflow chart and diagram, and applying knowledge of computer capabilities, subject matter, and symbolic logic.

Write, update, and maintain computer programs or software packages to handle specific jobs, such as tracking inventory, storing or retrieving data, or controlling other equipment.

Knowledge, Skills, and Abilities

Agile Development Methods and supporting development platforms to include Ruby on Rails, Lombardi Teamworks, or Domino 7.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Operations Analysis — Analyzing needs and product requirements to create a design.

Originality — the ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Programming — Writing computer programs for various purposes.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — determining causes of operating errors and deciding what to do about it.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Application Architecture and related technologies: N-Tier/Services Oriented Architecture, Web Services, WebLogic (Application Server), Oracle (RDBMS), PlumTree (Portal); WebLogic Web Server (Web Server); Internet Explorer & Netscape (Browser), Apache Struts (Development Framework); JBuilder Enterprise Edition (IDE); Concurrent Versions System-CVS (Version Management), Embarcadero Describe and System Architect (Architecture Modeling).

Programming and related technologies: Java, C, C++, Perl, Visual Basic, Oracle, MS Office, Lotus Notes/Domino, Java-based development tools (JBuilder), Excalibur RetrievalWare, Internet/Website and Content Management Technologies (i.e., Macromedia Dreamweaver, Fireworks, Flash, Adobe Illustrator and Photoshop, HTML, XML), Web Protocols and Technologies (XML, SOAP, HTML, HTTP, TCP/IP, etc.), Data Architecture and Database System Design, Database management software; Distributed database management software Business Process Management (i.e., Lombardi Works), Software and Systems Engineering, Information Security Operating System/Platform to include: Unix (Solaris), Windows, Linux, Thin Client (i.e., Citrix); Program testing software - defect tracking software; fault testing software; IBM Rational ClearQuest; Mercury Interactive LoadRunner.

Tools

Desktop computers

High end computer servers — Application servers; Directory servers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Application Architecture and related technologies: N-Tier/Services Oriented Architecture, Web Services, WebLogic (Application Server), Oracle (RDBMS), PlumTree (Portal); WebLogic Web Server (Web Server); Internet Explorer & Netscape (Browser), Apache Struts (Development Framework); JBuilder Enterprise Edition (IDE); Concurrent Versions System-CVS (Version Management), Embarcadero Describe and System Architect (Architecture Modeling).

Write, update, and maintain computer programs or software packages to handle specific jobs, such as tracking inventory, storing or retrieving data, or controlling other equipment.

Knowledge, Skills, and Abilities

Agile Development Methods and supporting development platforms to include Ruby on Rails, Lombardi Teamworks, or Domino 7.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Operations Analysis — Analyzing needs and product requirements to create a design.

Originality — the ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Programming — Writing computer programs for various purposes.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — determining causes of operating errors and deciding what to do about it.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Application Architecture and related technologies: N-Tier/Services Oriented Architecture, Web Services, WebLogic (Application Server), Oracle (RDBMS), PlumTree (Portal); WebLogic Web Server (Web Server); Internet Explorer & Netscape (Browser), Apache Struts (Development Framework); JBuilder Enterprise Edition (IDE); Concurrent Versions System-CVS (Version Management), Embarcadero Describe and System Architect (Architecture Modeling).

Programming and related technologies: Java, C, C++, Perl, Visual Basic, Oracle, MS Office, Lotus Notes/Domino, Java-based development tools (JBuilder), Excalibur RetrievalWare, Internet/Website and Content Management Technologies (i.e., Macromedia Dreamweaver, Fireworks, Flash, Adobe Illustrator and Photoshop, HTML, XML), Web Protocols and Technologies (XML, SOAP, HTML, HTTP, TCP/IP, etc.), Data Architecture and Database System Design, Database management software; Distributed database management software Business Process Management (i.e., Lombardi Works), Software and Systems Engineering, Information Security Operating System/Platform to include: Unix (Solaris), Windows, Linux, Thin Client (i.e., Citrix); Program testing software - defect tracking software; fault testing software; IBM Rational ClearQuest; Mercury Interactive LoadRunner.

Tools

Desktop computers

High end computer servers — Application servers; Directory servers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Software Systems Specialist - Manager

Skill Community: Enterprise IT

Labor Group: Computing Services

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Provides application development-programming for projects and infrastructure support activities. Designs and develops enterprise applications in a Web environment. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyzes user needs and develop software solutions. Designs software or customize software for client use with the aim of optimizing operational efficiency. May analyze and design databases within an application area, working individually or coordinating database development as part of a team. May manage websites including design, develop, deploy and maintain activities as well as performs testing and quality assurance of web sites and web applications.

Converts project specifications and statements of problems and procedures to detailed logical flow charts for coding into computer language. Develops and writes computer programs to store, locate, and retrieve specific documents, data, and information. Analyzes functional business applications and design specifications for functional activities. Develops codes, tests, and debugs new software or enhancements to existing software. Performs maintenance on existing software products and contributes knowledge of business applications. Writes programs according to specifications needed. Provide technical support in the evaluation of prime object names, data elements, and other objects. Ensure that proposed object definitions are clear, concise, technically correct, and that they represent singular concepts. Ensure that the proposed objects are consistent with data and process models. Works with the technical staff to understand problems had with software and then resolve them. Resolves customer complaints with the software and responds to suggestions for improvements and enhancements.   Develops block diagrams and logic flow charts.

Short Summary:

Provides application development-programming for projects and infrastructure support activities. Designs and develops enterprise applications in a Web environment. Develops, creates, and modifies general computer applications software or specialized utility programs. Analyzes user needs and develop software solutions. Designs software or customize software for client use with the aim of optimizing operational efficiency. May analyze and design databases within an application area, working individually or coordinating database development as part of a team. May manage websites including design, develop, deploy and maintain activities as well as performs testing and quality assurance of web sites and web applications....

Duties, Tasks, and Responsibilities

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Assign, coordinate, and review work and activities of programming personnel.

Collaborate with computer manufacturers and other users to develop new programming methods.

Compile and write documentation of program development and subsequent revisions, inserting comments in the coded instructions so others can understand the program.

Conduct trial runs of programs and software applications to be sure they will produce the desired information and that the instructions are correct.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with and assist computer operators or system analysts to define and resolve problems in running computer programs.

Consult with customers about software system design and maintenance.

Consult with managerial, engineering, and technical personnel to clarify program intent, identify problems, and suggest changes.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Correct errors by making appropriate changes and then recheck the program to ensure that the desired results are produced.

Design and develop database management systems, image processing, collaborative tools, data manipulation techniques, data visualization techniques, and directory services.

Design and develop tools for the MS Windows and relevant operating system platforms.

Design and develop tools that integrate with commercial applications.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop unit and functional test plan.

Investigate whether networks, workstations, the central processing unit of the system, or peripheral equipment are responding to a program's instructions.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Perform or direct revision, repair, or expansion of existing programs to increase operating efficiency or adapt to new requirements.

Prepare detailed workflow charts and diagrams that describe input, output, and logical operation, and convert them into a series of instructions coded in a computer language.

Provide database architectural and design capabilities.

Provide the operations and maintenance of operational systems.

Train subordinates in programming and program coding.

Write or contribute to instructions or manuals to guide end users.

Write, analyze, review, and rewrite programs, using workflow chart and diagram, and applying knowledge of computer capabilities, subject matter, and symbolic logic.

Write, update, and maintain computer programs or software packages to handle specific jobs, such as tracking inventory, storing or retrieving data, or controlling other equipment.

Knowledge, Skills, and Abilities

Agile Development Methods and supporting development platforms to include Ruby on Rails, Lombardi Teamworks, or Domino 7.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Operations Analysis — Analyzing needs and product requirements to create a design.

Originality — the ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Programming — Writing computer programs for various purposes.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — determining causes of operating errors and deciding what to do about it.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.

• Relevant certifications will be considered equivalent to three (3) months of specialized experience.

• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.

• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).

• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).

• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:

• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.

• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Application Architecture and related technologies: N-Tier/Services Oriented Architecture, Web Services, WebLogic (Application Server), Oracle (RDBMS), PlumTree (Portal); WebLogic Web Server (Web Server); Internet Explorer & Netscape (Browser), Apache Struts (Development Framework); JBuilder Enterprise Edition (IDE); Concurrent Versions System-CVS (Version Management), Embarcadero Describe and System Architect (Architecture Modeling).

Knowledge, Skills, and Abilities

Agile Development Methods and supporting development platforms to include Ruby on Rails, Lombardi Teamworks, or Domino 7.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Operations Analysis — Analyzing needs and product requirements to create a design.

Originality — the ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Programming — Writing computer programs for various purposes.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — determining causes of operating errors and deciding what to do about it.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Application Architecture and related technologies: N-Tier/Services Oriented Architecture, Web Services, WebLogic (Application Server), Oracle (RDBMS), PlumTree (Portal); WebLogic Web Server (Web Server); Internet Explorer & Netscape (Browser), Apache Struts (Development Framework); JBuilder Enterprise Edition (IDE); Concurrent Versions System-CVS (Version Management), Embarcadero Describe and System Architect (Architecture Modeling).

Programming and related technologies: Java, C, C++, Perl, Visual Basic, Oracle, MS Office, Lotus Notes/Domino, Java-based development tools (JBuilder), Excalibur RetrievalWare, Internet/Website and Content Management Technologies (i.e., Macromedia Dreamweaver, Fireworks, Flash, Adobe Illustrator and Photoshop, HTML, XML), Web Protocols and Technologies (XML, SOAP, HTML, HTTP, TCP/IP, etc.), Data Architecture and Database System Design, Database management software; Distributed database management software Business Process Management (i.e., Lombardi Works), Software and Systems Engineering, Information Security Operating System/Platform to include: Unix (Solaris), Windows, Linux, Thin Client (i.e., Citrix); Program testing software - defect tracking software; fault testing software; IBM Rational ClearQuest; Mercury Interactive LoadRunner.

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Systems Administrator - Developmental

Skill Community: Enterprise IT

Labor Group: Administration

Job Classification: Contractor

Status: Active

Date Effective: 10/31/2012

Standard Occupational Code:
[15-1140] Database and Systems Administrators and Network Architects

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab.The systems administration encompasses network and server administration. The systems administrator's responsibilities include: implementation of baseline changes and respond to change requests; perform technical evaluations, analysis, and troubleshooting for all supported servers; build servers by providing technical configuration, setup, installation services, hardware and coordination of application projects; and operate and maintain servers.

Short Summary:

The systems administration encompasses network and server administration. The systems administrator's responsibilities include: implementation of baseline changes and respond to change requests; perform technical evaluations, analysis, and troubleshooting for all supported servers; build servers by providing technical configuration, setup, installation services, hardware and coordination of application projects; and operate and maintain servers.

Duties, Tasks, and Responsibilities

Assess server loads and work with tech lead on developing tuning recommendations.

Assist in server maintenance and special projects, during extended work hours

Attend TEMs to discuss and agree upon MOAs –ensure MOA is within scope of server team's work.

Build servers: Provide technical configuration, setup, installation services, hardware and coordination for application projects.

Communicate outage/degradation of server to management

Coordinate server installation.

Create and/or update the Asset Management record—responsible for integrity of asset management record.

Create request for service support (SRS) from internal/external service providers

Ensure build report (procedure) is feasible, clear, and concise

Establish server baseline

Execute tasks in the following areas: change request, trouble ticket, routine operation and maintenance, and server build.

Implement baseline changes under tech lead oversight

Maintain server rooms.

Monitor/support tape backup

Perform operating system software updates/upgrades

Perform server checklist.

Perform technical evaluations, analysis, and troubleshooting for all "supported" servers in response to Help Desk Tickets—which includes but not limited the following activities: Server failures, full system outage.

Provide operational pager duty support

Provide remote access to servers

Request hardware replacements

Respond to assigned change requests that are submitted by "internal" and "external" customers.

Restore file and data information

Submit Build Reports for routine deliveries

Support customer in the development of a dedicated server build report as well as an internal build report.

Transition servers

Understand and implement established technical and workflow procedures

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Documentation —Ability to draft requirements documents, correspondence and procedures in accordance with policies

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Knowledge of Communications and Information Security policies and practices.

Knowledge of the CIO's policies and procedures relating to the design, upgrading, and operating and maintaining networks.

Knowledge of theory and practice underlying satellite and LAN/WAN network operations.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Network Analysis — Ability to utilize complex network analysis tools to resolve complex network performance problems.

Oral Expression — Ability to communicate information and ideas in speaking so others will understand

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Presentation — Ability to write technical proposals for presentation to approval boards.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem

Procedures and Processes — Ability to provide explanations of complex technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively

Systems Environment — Demonstrated ability to effectively function in a multi-system and/or multi-application environment

Systems — Knowledge of multiple specialties such as operating systems, email or database platforms, storage technologies, or hardware support, including knowledge of operating systems (e.g., NT, Windows 2000, UNIX, XP).

Technologies — Knowledge of existing server technologies including principles and methods used in obtaining maximum utilization of server technologies

Technology — Ability to assess the technical characteristics of new operating capabilities proposed for inclusion in the network to determine potential impact on network performance

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor
performance will be completed by the government at the contract level.

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Technologies — Knowledge of existing server technologies including principles and methods used in obtaining maximum utilization of server technologies

Technology — Ability to assess the technical characteristics of new operating capabilities proposed for inclusion in the network to determine potential impact on network performance

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor
performance will be completed by the government at the contract level.

Systems Administrator - Senior

Skill Community: Enterprise IT

Labor Group: Administration

Job Classification: Contractor

Status: Active

Date Effective: 5/30/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab.The systems administration encompasses network and server administration. The systems administrator's responsibilities include: implementation of baseline changes and respond to change requests; perform technical evaluations, analysis, and troubleshooting for all supported servers; build servers by providing technical configuration, setup, installation services, hardware and coordination of application projects; and operate and maintain servers.

Short Summary:

The systems administration encompasses network and server administration. The systems administrator's responsibilities include: implementation of baseline changes and respond to change requests; perform technical evaluations, analysis, and troubleshooting for all supported servers; build servers by providing technical configuration, setup, installation services, hardware and coordination of application projects; and operate and maintain servers.

Duties, Tasks, and Responsibilities

Assess server loads and work with tech lead on developing tuning recommendations.

Assist in server maintenance and special projects, during extended work hours

Attend TEMs to discuss and agree upon MOAs –ensure MOA is within scope of server team's work.

Build servers: Provide technical configuration, setup, installation services, hardware and coordination for application projects.

Communicate outage/degradation of server to management

Coordinate server installation.

Create and/or update the Asset Management record—responsible for integrity of asset management record.

Create request for service support (SRS) from internal/external service providers

Ensure build report (procedure) is feasible, clear, and concise

Establish server baseline

Execute tasks in the following areas: change request, trouble ticket, routine operation and maintenance, and server build.

Implement baseline changes under tech lead oversight

Maintain server rooms.

Monitor/support tape backup

Perform operating system software updates/upgrades

Perform server checklist.

Perform technical evaluations, analysis, and troubleshooting for all "supported" servers in response to Help Desk Tickets—which includes but not limited the following activities: Server failures, full system outage.

Provide operational pager duty support

Provide remote access to servers

Request hardware replacements

Respond to assigned change requests that are submitted by "internal" and "external" customers.

Restore file and data information

Submit Build Reports for routine deliveries

Support customer in the development of a dedicated server build report as well as an internal build report.

Transition servers

Understand and implement established technical and workflow procedures

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Documentation —Ability to draft requirements documents, correspondence and procedures in accordance with policies

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Knowledge of Communications and Information Security policies and practices.

Knowledge of the CIO's policies and procedures relating to the design, upgrading, and operating and maintaining networks.

Knowledge of theory and practice underlying satellite and LAN/WAN network operations.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Network Analysis — Ability to utilize complex network analysis tools to resolve complex network performance problems.

Oral Expression — Ability to communicate information and ideas in speaking so others will understand

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Presentation — Ability to write technical proposals for presentation to approval boards.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem

Procedures and Processes — Ability to provide explanations of complex technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively

Systems Environment — Demonstrated ability to effectively function in a multi-system and/or multi-application environment

Systems — Knowledge of multiple specialties such as operating systems, email or database platforms, storage technologies, or hardware support, including knowledge of operating systems (e.g., NT, Windows 2000, UNIX, XP).

Technologies — Knowledge of existing server technologies including principles and methods used in obtaining maximum utilization of server technologies

Technology — Ability to assess the technical characteristics of new operating capabilities proposed for inclusion in the network to determine potential impact on network performance

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

performance will be completed by the government at the contract level.

Systems Analyst - Developmental

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Responsible for analyzing internal and external customer needs. Identifies and determines equipment, software and process/procedural solutions to problems. Establishes system parameters and formats, and ensures hardware/software compatibility.
Analyzes science, engineering, business, and all other data processing problems for application to electronic data processing systems. Analyzes user requirements, procedures, and problems to automate or improve existing systems and review computer system capabilities, workflow, and scheduling limitations. May analyze or recommend commercially available software. May supervise computer programmers. Performs process and data modeling in support of the planning and analysis efforts using both manual and automated tools. Applies reverse engineering and re-engineering disciplines to develop strategic and planning documents. Provides group facilitation, interviewing, training, and provides additional forms of knowledge transfer.   Constructs sound, logical business improvement opportunities consistent with corporate Information Management guiding principles, cost savings, and system architecture objectives. Key coordinator between multiple project teams to ensure enterprise-wide integration of reengineering efforts.

Constructs sound, logical business improvement opportunities consistent with corporate Information Management guiding principles, cost savings, and system architecture objectives. Key coordinator between multiple project teams to ensure enterprise-wide integration of reengineering efforts.

Duties, Tasks, and Responsibilities

Advise on new techniques and estimated costs associated with new or revised programs and utilities - taking into consideration personnel, time, and hardware requirements and makes trade-off analyses

Analyze information processing or computation needs and plan and design computer systems, using techniques such as structured analysis, data modeling and information engineering.

Analyze new hardware and software to determine their need or application in the existing or proposed system

Assess the usefulness of pre-developed application packages and adapt them to a user environment.

Confer with clients regarding the nature of the information processing or computation needs a computer program is to address.

Consult with management to ensure agreement on system principles.

Coordinate and link the computer systems within an organization to increase compatibility and so information can be shared.

Define the goals of the system and devise flow charts and diagrams describing logical operational steps of programs.

Determine computer software or hardware needed to set up or alter system.

Develop, document and revise system design procedures, test procedures, and quality standards.

Expand or modify system to serve new purposes or improve workflow.

Interview or survey workers, observe job performance or perform the job to determine what information is processed and how it is processed.

Prepare cost-benefit and return-on-investment analyses to aid in decisions on system implementation.

Read manuals, periodicals, and technical reports to learn how to develop programs that meet staff and user requirements.

Recommend new equipment or software packages.

Review and analyze computer printouts and performance indicators to locate code problems, and correct errors by correcting codes.

Review documentation, describing system specifications and operating instructions, and revise existing processes and procedures to correct deficiencies and maintain more effective data handling, conversion, input/output requirements and storage.

Specify inputs accessed by the system and plan the distribution and use of the results.

Supervise computer programmers or other systems analysts or serve as project leaders for particular systems projects.

Test, maintain, and monitor computer programs and systems, including coordinating the installation of computer programs and systems.

Train staff and users to work with computer systems and programs.

Use object-oriented programming languages, as well as client/server applications development processes and multimedia and Internet technology.

Utilize the computer in the analysis and solution of business problems such as development of integrated production and inventory control and cost analysis systems.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Quality Control Analysis — Conducting tests and inspections of products, services, or processes to evaluate quality or performance.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Service Orientation — Actively looking for ways to help people.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Time Management — Managing one's own time and the time of others.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Configuration management software — Automated installation software; IBM Rational ClearCase; Wise Solutions software; Wise Solutions Wise for Windows Installer

Data base management system software — Database management software; Microsoft SQL Server; Oracle DBMS; Relational database management software

Development environment software — C; IBM Rational Rose XDE Developer; Microsoft Visual Basic; Symantec Visual Caf

Object or component oriented development software — C++; Distributed component object model DCOM software; Rapide; Sun Microsystems Java

Program testing software — Compatibility testing software; Defect tracking software; Mercury Interactive LoadRunner; Usability testing software

Web platform development software — Active directory software; Allaire ColdFusion; Hypertext markup language HTML; JavaScript

Tools

Desktop computers

Mainframe computers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Analyzes science, engineering, business, and all other data processing problems for application to electronic data processing systems. Analyzes user requirements, procedures, and problems to automate or improve existing systems and review computer system capabilities, workflow, and scheduling limitations. May analyze or recommend commercially available software. May supervise computer programmers. Performs process and data modeling in support of the planning and analysis efforts using both manual and automated tools. Applies reverse engineering and re-engineering disciplines to develop strategic and planning documents. Provides group facilitation, interviewing, training, and provides additional forms of knowledge transfer.   Constructs sound, logical business improvement opportunities consistent with corporate Information Management guiding principles, cost savings, and system architecture objectives. Key coordinator between multiple project teams to ensure enterprise-wide integration of reengineering efforts.

Duties, Tasks, and Responsibilities

Advise on new techniques and estimated costs associated with new or revised programs and utilities - taking into consideration personnel, time, and hardware requirements and makes trade-off analyses

Analyze information processing or computation needs and plan and design computer systems, using techniques such as structured analysis, data modeling and information engineering.

Analyze new hardware and software to determine their need or application in the existing or proposed system

Assess the usefulness of pre-developed application packages and adapt them to a user environment.

Confer with clients regarding the nature of the information processing or computation needs a computer program is to address.

Consult with management to ensure agreement on system principles.

Coordinate and link the computer systems within an organization to increase compatibility and so information can be shared.

Define the goals of the system and devise flow charts and diagrams describing logical operational steps of programs.

Determine computer software or hardware needed to set up or alter system.

Develop, document and revise system design procedures, test procedures, and quality standards.

Expand or modify system to serve new purposes or improve workflow.

Interview or survey workers, observe job performance or perform the job to determine what information is processed and how it is processed.

Prepare cost-benefit and return-on-investment analyses to aid in decisions on system implementation.

Read manuals, periodicals, and technical reports to learn how to develop programs that meet staff and user requirements.

Recommend new equipment or software packages.

Review and analyze computer printouts and performance indicators to locate code problems, and correct errors by correcting codes.

Review documentation, describing system specifications and operating instructions, and revise existing processes and procedures to correct deficiencies and maintain more effective data handling, conversion, input/output requirements and storage.

Specify inputs accessed by the system and plan the distribution and use of the results.

Supervise computer programmers or other systems analysts or serve as project leaders for particular systems projects.

Test, maintain, and monitor computer programs and systems, including coordinating the installation of computer programs and systems.

Train staff and users to work with computer systems and programs.

Use object-oriented programming languages, as well as client/server applications development processes and multimedia and Internet technology.

Utilize the computer in the analysis and solution of business problems such as development of integrated production and inventory control and cost analysis systems.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Quality Control Analysis — Conducting tests and inspections of products, services, or processes to evaluate quality or performance.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Service Orientation — Actively looking for ways to help people.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Time Management — Managing one's own time and the time of others.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Configuration management software — Automated installation software; IBM Rational ClearCase; Wise Solutions software; Wise Solutions Wise for Windows Installer

Data base management system software — Database management software; Microsoft SQL Server; Oracle DBMS; Relational database management software

Development environment software — C; IBM Rational Rose XDE Developer; Microsoft Visual Basic; Symantec Visual Caf

Object or component oriented development software — C++; Distributed component object model DCOM software; Rapide; Sun Microsystems Java

Program testing software — Compatibility testing software; Defect tracking software; Mercury Interactive LoadRunner; Usability testing software

Web platform development software — Active directory software; Allaire ColdFusion; Hypertext markup language HTML; JavaScript

Tools

Desktop computers

Mainframe computers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Systems Analyst - Full Performance

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Responsible for analyzing internal and external customer needs. Identifies and determines equipment, software and process/procedural solutions to problems. Establishes system parameters and formats, and ensures hardware/software compatibility.
Analyzes science, engineering, business, and all other data processing problems for application to electronic data processing systems. Analyzes user requirements, procedures, and problems to automate or improve existing systems and review computer system capabilities, workflow, and scheduling limitations. May analyze or recommend commercially available software. May supervise computer programmers. Performs process and data modeling in support of the planning and analysis efforts using both manual and automated tools. Applies reverse engineering and re-engineering disciplines to develop strategic and planning documents. Provides group facilitation, interviewing, training, and provides additional forms of knowledge transfer.   Constructs sound, logical business improvement opportunities consistent with corporate Information Management guiding principles, cost savings, and system architecture objectives. Key coordinator between multiple project teams to ensure enterprise-wide integration of reengineering efforts.

Systems Analyst - Senior

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Responsible for analyzing internal and external customer needs. Identifies and determines equipment, software and process/procedural solutions to problems. Establishes system parameters and formats, and ensures hardware/software compatibility.
Analyzes science, engineering, business, and all other data processing problems for application to electronic data processing systems. Analyzes user requirements, procedures, and problems to automate or improve existing systems and review computer system capabilities, workflow, and scheduling limitations. May analyze or recommend commercially available software. May supervise computer programmers. Performs process and data modeling in support of the planning and analysis efforts using both manual and automated tools. Applies reverse engineering and re-engineering disciplines to develop strategic and planning documents. Provides group facilitation, interviewing, training, and provides additional forms of knowledge transfer. Constructs sound, logical business improvement opportunities consistent with corporate Information Management guiding principles, cost savings, and system architecture objectives. Key coordinator between multiple project teams to ensure enterprise-wide integration of reengineering efforts.

Duties, Tasks, and Responsibilities

Advise on new techniques and estimated costs associated with new or revised programs and utilities - taking into consideration personnel, time, and hardware requirements and makes trade-off analyses

Analyze information processing or computation needs and plan and design computer systems, using techniques such as structured analysis, data modeling and information engineering.

Analyze new hardware and software to determine their need or application in the existing or proposed system

Assess the usefulness of pre-developed application packages and adapt them to a user environment.

Confer with clients regarding the nature of the information processing or computation needs a computer program is to address.

Consult with management to ensure agreement on system principles.

Coordinate and link the computer systems within an organization to increase compatibility and so information can be shared.

Define the goals of the system and devise flow charts and diagrams describing logical operational steps of programs.

Determine computer software or hardware needed to set up or alter system.

Develop, document and revise system design procedures, test procedures, and quality standards.

Expand or modify system to serve new purposes or improve workflow.

Interview or survey workers, observe job performance or perform the job to determine what information is processed and how it is processed.

Prepare cost-benefit and return-on-investment analyses to aid in decisions on system implementation.

Read manuals, periodicals, and technical reports to learn how to develop programs that meet staff and user requirements.

Recommend new equipment or software packages.

Review and analyze computer printouts and performance indicators to locate code problems, and correct errors by correcting codes.

Review documentation, describing system specifications and operating instructions, and revise existing processes and procedures to correct deficiencies and maintain more effective data handling, conversion, input/output requirements and storage.

Specify inputs accessed by the system and plan the distribution and use of the results.

Supervise computer programmers or other systems analysts or serve as project leaders for particular systems projects.

Test, maintain, and monitor computer programs and systems, including coordinating the installation of computer programs and systems.

Train staff and users to work with computer systems and programs.

Use object-oriented programming languages, as well as client/server applications development processes and multimedia and Internet technology.

Utilize the computer in the analysis and solution of business problems such as development of integrated production and inventory control and cost analysis systems.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Quality Control Analysis — Conducting tests and inspections of products, services, or processes to evaluate quality or performance.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Service Orientation — Actively looking for ways to help people.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Time Management — Managing one's own time and the time of others.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Configuration management software — Automated installation software; IBM Rational ClearCase; Wise Solutions software; Wise Solutions Wise for Windows Installer

Data base management system software — Database management software; Microsoft SQL Server; Oracle DBMS; Relational database management software

Development environment software — C; IBM Rational Rose XDE Developer; Microsoft Visual Basic; Symantec Visual Caf

Object or component oriented development software — C++; Distributed component object model DCOM software; Rapide; Sun Microsystems Java

Program testing software — Compatibility testing software; Defect tracking software; Mercury Interactive LoadRunner; Usability testing software

Web platform development software — Active directory software; Allaire ColdFusion; Hypertext markup language HTML; JavaScript

Tools

Desktop computers

Mainframe computers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Systems Analyst - Subject Matter Expert

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Responsible for analyzing internal and external customer needs. Identifies and determines equipment, software and process/procedural solutions to problems. Establishes system parameters and formats, and ensures hardware/software compatibility.
Analyzes science, engineering, business, and all other data processing problems for application to electronic data processing systems. Analyzes user requirements, procedures, and problems to automate or improve existing systems and review computer system capabilities, workflow, and scheduling limitations. May analyze or recommend commercially available software. May supervise computer programmers. Performs process and data modeling in support of the planning and analysis efforts using both manual and automated tools. Applies reverse engineering and re-engineering disciplines to develop strategic and planning documents. Provides group facilitation, interviewing, training, and provides additional forms of knowledge transfer.   Constructs sound, logical business improvement opportunities consistent with corporate Information Management guiding principles, cost savings, and system architecture objectives. Key coordinator between multiple project teams to ensure enterprise-wide integration of reengineering efforts.

Short Summary:

Responsible for analyzing internal and external customer needs. Identifies and determines equipment, software and process/procedural solutions to problems. Establishes system parameters and formats, and ensures hardware/software compatibility.
Analyzes science, engineering, business, and all other data processing problems for application to electronic data processing systems. Analyzes user requirements, procedures, and problems to automate or improve existing systems and review computer system capabilities, workflow, and scheduling limitations. May analyze or recommend commercially available software. May supervise computer programmers. Performs process and data modeling in support of the planning and analysis efforts using both manual and automated tools. Provides group facilitation, interviewing, training, and provides additional forms of knowledge transfer.   Constructs sound, logical business improvement opportunities consistent with corporate Information Management guiding principles, cost savings, and system architecture objectives. Key coordinator between multiple project teams to ensure enterprise-wide integration of reengineering efforts.

Duties, Tasks, and Responsibilities

Advise on new techniques and estimated costs associated with new or revised programs and utilities - taking into consideration personnel, time, and hardware requirements and makes trade-off analyses

Analyze information processing or computation needs and plan and design computer systems, using techniques such as structured analysis, data modeling and information engineering.

Analyze new hardware and software to determine their need or application in the existing or proposed system

Assess the usefulness of pre-developed application packages and adapt them to a user environment.

Confer with clients regarding the nature of the information processing or computation needs a computer program is to address.

Consult with management to ensure agreement on system principles.

Coordinate and link the computer systems within an organization to increase compatibility and so information can be shared.

Define the goals of the system and devise flow charts and diagrams describing logical operational steps of programs.

Determine computer software or hardware needed to set up or alter system.

Develop, document and revise system design procedures, test procedures, and quality standards.

Expand or modify system to serve new purposes or improve workflow.

Interview or survey workers, observe job performance or perform the job to determine what information is processed and how it is processed.

Prepare cost-benefit and return-on-investment analyses to aid in decisions on system implementation.

Read manuals, periodicals, and technical reports to learn how to develop programs that meet staff and user requirements.

Recommend new equipment or software packages.

Review and analyze computer printouts and performance indicators to locate code problems, and correct errors by correcting codes.

Review documentation, describing system specifications and operating instructions, and revise existing processes and procedures to correct deficiencies and maintain more effective data handling, conversion, input/output requirements and storage.

Specify inputs accessed by the system and plan the distribution and use of the results.

Supervise computer programmers or other systems analysts or serve as project leaders for particular systems projects.

Test, maintain, and monitor computer programs and systems, including coordinating the installation of computer programs and systems.

Train staff and users to work with computer systems and programs.

Use object-oriented programming languages, as well as client/server applications development processes and multimedia and Internet technology.

Utilize the computer in the analysis and solution of business problems such as development of integrated production and inventory control and cost analysis systems.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Quality Control Analysis — Conducting tests and inspections of products, services, or processes to evaluate quality or performance.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Service Orientation — Actively looking for ways to help people.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Time Management — Managing one's own time and the time of others.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Systems Architect - Developmental

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Designs and develops solutions to complex applications problems, system administration issues, or network concerns. Performs systems management and integration functions. Analyzes science, engineering, business, and all other data processing problems for application to electronic data processing systems. Analyzes user requirements, procedures, and problems to automate or improve existing systems and review computer system capabilities, workflow, and scheduling limitations. May analyze or recommend commercially available software.
Incorporates engineering strategies for introducing new technology into the NRO's infrastructure-related business processes. Develops future technology and architectural advancements to support CIO architectural strategy, technology migration, and integration and evolution.
Applies knowledge of enterprise IT needs to design improved processes, generate valid requirements, and ensures these are consistent with the NRO's CIO enterprise technical architecture (ETA) and Federal Enterprise Architecture (FEA). Acts as an advisor and proposes changes to the ETA based on analysis of requirements and new technology. Works with appropriate parties to resolve discrepancies between proposed IT systems and enterprise quality and security standards. Provides technical and administrative direction for personnel performing software development tasks, makes recommendations, if needed, for approval of major systems installations. Designs and develops computer software possessing a wide range of capabilities, including numerous engineering, business, and records management functions.

Short Summary:

Designs and develops solutions to complex applications problems, system administration issues, or network concerns. Performs systems management and integration functions. Analyzes science, engineering, business, and all other data processing problems for application to electronic data processing systems. Duties, Tasks, and Responsibilities

Coordinate, review, and integrate the deliverables of information and technology architects into cohesive solutions architectures.

Design all data solutions in alignment with applicable policies, standards, and practices.

Perform other duties as needed

Provide creative and innovative architectural solutions to ill-defined requirements.

Review and assess impact of proposed scope changes to future architectures.

Support the development and maintenance of data models, data dictionaries, data maps and other architecture artifacts across the enterprise.

Willingness and passion to learn new hardware/software systems that are consistent with duties

Work with senior business and technical personnel to deliver a robust scalable architecture that meets the business goals of the enterprise.

Knowledge, Skills, and Abilities

A willingness to participate in training and project management functions as needed

Ability to explain technical issues clearly and accurately to both technical and non-technical audiences.

Ability to translate requirements into end-to-end designs for systems that involve multiple interfaces and supporting data repositories.

An easy-going personality and a good sense of humor.

Demonstrated ability to adjust to changing priorities.

Demonstrated ability to be a quick learner who can work independently.

Demonstrated knowledge and expertise in enterprise data strategy, data governance practices, data stewardship principles, data architecture principles, data standards, and metadata management best practices.

Excellent communication skills, both written and oral.

Experience with Java/JEE APIs, JavaScript.

Experience with Web Services, Service-Oriented Architecture (SOA), application integration technologies and approaches, Business Intelligence/Data Warehousing solutions, data management technologies (Extract-Transform-Load (ETL), Data Profiling, Data Mining, Metadata Repositories)

Experience with other programming languages such as Ruby, Python, Lisp or C/C++.

Experience with successful full life-cycle software development projects.

Familiarity with good object-oriented design principles and UML modeling techniques

Familiarity with open source products and tools such as Eclipse, Ant, JUnit, Apache, Tomcat.

Knowledge of CWE (Windows XP), Linux, and Solaris operating environments.

Significant experience with HTML/XHTML and XML.

Significant experience with popular database management system (DBMS) products such as Oracle and MySQL.

Strong customer service skills, teaming skills, and the ability to collaborate within a cross-functional team.

Strong data analysis and data quality assessment skills

Strong knowledge of data modeling and design techniques for both relational and multi-dimensional databases.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Systems Architect - Manager

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Designs and develops solutions to complex applications problems, system administration issues, or network concerns. Performs systems management and integration functions. Analyzes science, engineering, business, and all other data processing problems for application to electronic data processing systems. Analyzes user requirements, procedures, and problems to automate or improve existing systems and review computer system capabilities, workflow, and scheduling limitations. May analyze or recommend commercially available software.
Incorporates engineering strategies for introducing new technology into the NRO's infrastructure-related business processes. Develops future technology and architectural advancements to support CIO architectural strategy, technology migration, and integration and evolution.
Applies knowledge of enterprise IT needs to design improved processes, generate valid requirements, and ensures these are consistent with the NRO's CIO enterprise technical architecture (ETA) and Federal Enterprise Architecture (FEA). Acts as an advisor and proposes changes to the ETA based on analysis of requirements and new technology. Works with appropriate parties to resolve discrepancies between proposed IT systems and enterprise quality and security standards. Provides technical and administrative direction for personnel performing software development tasks, makes recommendations, if needed, for approval of major systems installations. Designs and develops computer software possessing a wide range of capabilities, including numerous engineering, business, and records management functions.

Short Summary:

Designs and develops solutions to complex applications problems, system administration issues, or network concerns. Performs systems management and integration functions. Analyzes science, engineering, business, and all other data processing problems for application to electronic data processing systems. Analyzes user requirements, procedures, and problems to automate or improve existing systems and review computer system capabilities, workflow, and scheduling limitations. May analyze or recommend commercially available software.
Incorporates engineering strategies for introducing new technology into the NRO's infrastructure-related business processes. Develops future technology and architectural advancements to support CIO architectural strategy, technology migration, and integration and evolution.

Duties, Tasks, and Responsibilities

Coordinate, review, and integrate the deliverables of information and technology architects into cohesive solutions architectures.

Design all data solutions in alignment with applicable policies, standards, and practices.

Perform other duties as needed

Provide creative and innovative architectural solutions to ill-defined requirements.

Review and assess impact of proposed scope changes to future architectures.

Support the development and maintenance of data models, data dictionaries, data maps and other architecture artifacts across the enterprise.

Willingness and passion to learn new hardware/software systems that are consistent with duties

Work with senior business and technical personnel to deliver a robust scalable architecture that meets the business goals of the enterprise.

Knowledge, Skills, and Abilities

A willingness to participate in training and project management functions as needed

Ability to explain technical issues clearly and accurately to both technical and non-technical audiences.

Ability to translate requirements into end-to-end designs for systems that involve multiple interfaces and supporting data repositories.

An easy-going personality and a good sense of humor.

Demonstrated ability to adjust to changing priorities.

Demonstrated ability to be a quick learner who can work independently.

Demonstrated knowledge and expertise in enterprise data strategy, data governance practices, data stewardship principles, data architecture principles, data standards, and metadata management best practices.

Excellent communication skills, both written and oral.

Experience with Java/JEE APIs, JavaScript.

Experience with Web Services, Service-Oriented Architecture (SOA), application integration technologies and approaches, Business Intelligence/Data Warehousing solutions, data management technologies (Extract-Transform-Load (ETL), Data Profiling, Data Mining, Metadata Repositories)

Experience with other programming languages such as Ruby, Python, Lisp or C/C++.

Experience with successful full life-cycle software development projects.

Familiarity with good object-oriented design principles and UML modeling techniques

Familiarity with open source products and tools such as Eclipse, Ant, JUnit, Apache, Tomcat.

Knowledge of CWE (Windows XP), Linux, and Solaris operating environments.

Significant experience with HTML/XHTML and XML.

Significant experience with popular database management system (DBMS) products such as Oracle and MySQL.

Strong customer service skills, teaming skills, and the ability to collaborate within a cross-functional team.

Strong data analysis and data quality assessment skills

Strong knowledge of data modeling and design techniques for both relational and multi-dimensional databases.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Systems Architect - Senior

Minimum Experience

Senior:

• A senior level practitioner.

• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.

• Requires a minimum of six (6) years of experience specific to the skill.

• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Systems Engineer - Developmental

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Enterprise System Engineer serve to maintain a strong awareness of technical trends in information technology, develop and maintain a strong awareness of on-going IT projects, and business unit requirements; be able to apply the project management model (e.g. Spiral, Waterfall, Agile) selected for a given development effort; and provide analysis, design, development, deployment, and lifecycle support for innovative hardware systems and applications. Work involves being able to develop end-to-end cost analysis for projects; ensure systems being developed comply with the enterprise technical architecture; help project and program teams prepare for CIO Project Management Program control gates; and keep senior management apprised of project or program status. Assignments may include leading teams consisting of contractor personnel.

Short Summary:

Enterprise System Engineer serve to maintain a strong awareness of technical trends in information technology, develop and maintain a strong awareness of on-going IT projects, and business unit requirements; be able to apply the project management model (e.g. Spiral, Waterfall, Agile) selected for a given development effort; and provide analysis, design, development, deployment, and lifecycle support for innovative hardware systems and applications. Assignments may include leading teams consisting of contractor personnel.

Duties, Tasks, and Responsibilities

Analyze and study complex system requirements.

Analyze functional business applications and design specifications for functional activities.

Apply business process improvement practices to re-engineer methodologies and principles and business process modernization projects.

Apply the concept of operations set of disciplines for the planning, analysis, design and construction of information systems across a major sector of the organization.

Apply, as appropriate, activity and data modeling, transaction flow analysis, internal control and risk analysis and modern business methods and performance measurement techniques.

Assist in establishing standards for information systems procedures.

Confer with clients regarding the nature of the information processing or computation needs a computer program is to address.

Consult with management to ensure agreement on system principles.

Coordinate and link the computer systems within an organization to increase compatibility and so information can be shared.

Design software tools and subsystems to support software reuse and domain analyses and manages their implementation.

Develop analytical and computational techniques and methodology for problem solutions.

Develop and apply organization-wide information models for use in designing and building integrated, shared software and database management systems.

Develops block diagrams and logic flow charts. Translate detailed design into computer software.

Enhance software to reduce operating time or improve efficiency.

Ensure the logical and systematic conversion of customer or product requirements into total systems solutions that acknowledge technical, schedule, and cost constraints.

Estimate software development costs and schedule. Review existing programs and assist in making refinements, reducing operating time, and improve current techniques. Supervise software configuration management.

Expand or modify system to serve new purposes or improve workflow.

Manage software development and support using formal specifications, data flow diagrams, other accepted design techniques and Computer Aided Software Engineering (CASE) tools.

Perform functional analysis, timeline analysis, cost estimation, trade studies, requirements allocation and interface definition studies to translate customer requirements into hardware and software specifications.

Perform strategic systems planning, business information planning, business and analysis.

Prepare required documentation, including both program-level and user-level documentation.

Provide staff and users with assistance solving computer related problems, such as malfunctions and program problems.

Provide technical direction to programmers to ensure program deadlines are met.

Provide technical guidance in software engineering techniques and automated support tools.

Test, maintain, and monitor computer programs and systems, including coordinating the installation of computer programs and systems.

Tests, debugs, and refines the computer software to produce the required product.

Use object-oriented programming languages, as well as client/server applications development processes and multimedia and Internet technology.

Knowledge, Skills, and Abilities

Ability to convey technical information to non-technical individuals.

Ability to develop a project plan and workflow based on a project management model.

Ability to effectively understand and communicate orally, in writing, and interpersonally to various customers/audiences.

Ability to identify technology gaps in current capabilities and processes.

Ability to troubleshoot and problem solve both technical and non-technical issues.

Ability to troubleshoot and problem solve technical and non-technical issues (e.g. equipment, systems, networks, computer operations, cover issues etc)..

Ability to work both independently and in a team environment.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Considerable knowledge of Project Management concepts and principles.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems..

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

Knowledge of the Intelligence Community.

Knowledge of the 's project management processes, procedures and tools.

Operations Analysis — Analyzing needs and product requirements to create a design.

Project planning and management skills, including scope of work, time estimation, and resource assignment.

Strong analytical and conceptual skills; ability to create original concepts/theories for various projects.

Strong interpersonal skills to resolve problems in a professional manner, lead working groups, negotiate and create consensus.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Data base user interface and query software — Database software; Microsoft Access

MS Office Suite

Markup language – HTML

Metric Tool

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Develop and apply organization-wide information models for use in designing and building integrated, shared software and database management systems.

Develops block diagrams and logic flow charts. Translate detailed design into computer software.

Enhance software to reduce operating time or improve efficiency.

Ensure the logical and systematic conversion of customer or product requirements into total systems solutions that acknowledge technical, schedule, and cost constraints.

Estimate software development costs and schedule. Review existing programs and assist in making refinements, reducing operating time, and improve current techniques. Supervise software configuration management.

Expand or modify system to serve new purposes or improve workflow.

Manage software development and support using formal specifications, data flow diagrams, other accepted design techniques and Computer Aided Software Engineering (CASE) tools.

Perform functional analysis, timeline analysis, cost estimation, trade studies, requirements allocation and interface definition studies to translate customer requirements into hardware and software specifications.

Perform strategic systems planning, business information planning, business and analysis.

Prepare required documentation, including both program-level and user-level documentation.

Provide staff and users with assistance solving computer related problems, such as malfunctions and program problems.

Provide technical direction to programmers to ensure program deadlines are met.

Provide technical guidance in software engineering techniques and automated support tools.

Test, maintain, and monitor computer programs and systems, including coordinating the installation of computer programs and systems.

Tests, debugs, and refines the computer software to produce the required product.

Use object-oriented programming languages, as well as client/server applications development processes and multimedia and Internet technology.

Knowledge, Skills, and Abilities

Ability to convey technical information to non-technical individuals.

Ability to develop a project plan and workflow based on a project management model.

Ability to effectively understand and communicate orally, in writing, and interpersonally to various customers/audiences.

Ability to identify technology gaps in current capabilities and processes.

Ability to troubleshoot and problem solve both technical and non-technical issues.

Ability to troubleshoot and problem solve technical and non-technical issues (e.g. equipment, systems, networks, computer operations, cover issues etc)..

Ability to work both independently and in a team environment.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Considerable knowledge of Project Management concepts and principles.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems..

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

Knowledge of the Intelligence Community.

Knowledge of the 's project management processes, procedures and tools.

Operations Analysis — Analyzing needs and product requirements to create a design.

Project planning and management skills, including scope of work, time estimation, and resource assignment.

Strong analytical and conceptual skills; ability to create original concepts/theories for various projects.

Strong interpersonal skills to resolve problems in a professional manner, lead working groups, negotiate and create consensus.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Metric Tool

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Systems Engineer - Full Performance

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Enterprise System Engineer serve to maintain a strong awareness of technical trends in information technology, develop and maintain a strong awareness of on-going IT projects, and business unit requirements; be able to apply the project management model (e.g. Spiral, Waterfall, Agile) selected for a given development effort; and provide analysis, design, development, deployment, and lifecycle support for innovative hardware systems and applications. Work involves being able to develop end-to-end cost analysis for projects; ensure systems being developed comply with the enterprise technical architecture; help project and program teams prepare for CIO Project Management Program control gates; and keep senior management apprised of project or program status. Assignments may include leading teams consisting of contractor personnel.

Short Summary:

Enterprise System Engineer serve to maintain a strong awareness of technical trends in information technology, develop and maintain a strong awareness of on-going IT projects, and business unit requirements; be able to apply the project management model (e.g. Spiral, Waterfall, Agile) selected for a given development effort; and provide analysis, design, development, deployment, and lifecycle support for innovative hardware systems and applications. Assignments may include leading teams consisting of contractor personnel.

Duties, Tasks, and Responsibilities

Analyze and study complex system requirements.

Analyze functional business applications and design specifications for functional activities.

Apply business process improvement practices to re-engineer methodologies and principles and business process modernization projects.

Apply the concept of operations set of disciplines for the planning, analysis, design and construction of information systems across a major sector of the organization.

Apply, as appropriate, activity and data modeling, transaction flow analysis, internal control and risk analysis and modern business methods and performance measurement techniques.

Assist in establishing standards for information systems procedures.

Confer with clients regarding the nature of the information processing or computation needs a computer program is to address.

Consult with management to ensure agreement on system principles.

Coordinate and link the computer systems within an organization to increase compatibility and so information can be shared.

Design software tools and subsystems to support software reuse and domain analyses and manages their implementation.

Develop analytical and computational techniques and methodology for problem solutions.

Develop and apply organization-wide information models for use in designing and building integrated, shared software and database management systems.

Develops block diagrams and logic flow charts. Translate detailed design into computer software.

Enhance software to reduce operating time or improve efficiency.

Ensure the logical and systematic conversion of customer or product requirements into total systems solutions that acknowledge technical, schedule, and cost constraints.

Estimate software development costs and schedule. Review existing programs and assist in making refinements, reducing operating time, and improve current techniques. Supervise software configuration management.

Expand or modify system to serve new purposes or improve workflow.

Manage software development and support using formal specifications, data flow diagrams, other accepted design techniques and Computer Aided Software Engineering (CASE) tools.

Perform functional analysis, timeline analysis, cost estimation, trade studies, requirements allocation and interface definition studies to translate customer requirements into hardware and software specifications.

Perform strategic systems planning, business information planning, business and analysis.

Prepare required documentation, including both program-level and user-level documentation.

Provide staff and users with assistance solving computer related problems, such as malfunctions and program problems.

Provide technical direction to programmers to ensure program deadlines are met.

Apply the concept of operations set of disciplines for the planning, analysis, design and construction of information systems across a major sector of the organization.

Apply, as appropriate, activity and data modeling, transaction flow analysis, internal control and risk analysis and modern business methods and performance measurement techniques.

Assist in establishing standards for information systems procedures.

Confer with clients regarding the nature of the information processing or computation needs a computer program is to address.

Consult with management to ensure agreement on system principles.

Coordinate and link the computer systems within an organization to increase compatibility and so information can be shared.

Design software tools and subsystems to support software reuse and domain analyses and manages their implementation.

Develop analytical and computational techniques and methodology for problem solutions.

Develop and apply organization-wide information models for use in designing and building integrated, shared software and database management systems.

Develops block diagrams and logic flow charts. Translate detailed design into computer software.

Enhance software to reduce operating time or improve efficiency.

Ensure the logical and systematic conversion of customer or product requirements into total systems solutions that acknowledge technical, schedule, and cost constraints.

Estimate software development costs and schedule. Review existing programs and assist in making refinements, reducing operating time, and improve current techniques. Supervise software configuration management.

Expand or modify system to serve new purposes or improve workflow.

Manage software development and support using formal specifications, data flow diagrams, other accepted design techniques and Computer Aided Software Engineering (CASE) tools.

Perform functional analysis, timeline analysis, cost estimation, trade studies, requirements allocation and interface definition studies to translate customer requirements into hardware and software specifications.

Perform strategic systems planning, business information planning, business and analysis.

Prepare required documentation, including both program-level and user-level documentation.

Provide staff and users with assistance solving computer related problems, such as malfunctions and program problems.

Provide technical direction to programmers to ensure program deadlines are met.

Provide technical guidance in software engineering techniques and automated support tools.

Test, maintain, and monitor computer programs and systems, including coordinating the installation of computer programs and systems.

Tests, debugs, and refines the computer software to produce the required product.

Use object-oriented programming languages, as well as client/server applications development processes and multimedia and Internet technology.

Knowledge, Skills, and Abilities

Ability to convey technical information to non-technical individuals.

Ability to develop a project plan and workflow based on a project management model.

Ability to effectively understand and communicate orally, in writing, and interpersonally to various customers/audiences.

Ability to identify technology gaps in current capabilities and processes.

Ability to troubleshoot and problem solve both technical and non-technical issues.

Ability to troubleshoot and problem solve technical and non-technical issues (e.g. equipment, systems, networks, computer operations, cover issues etc)..

Ability to work both independently and in a team environment.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Considerable knowledge of Project Management concepts and principles.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems..

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

Knowledge of the Intelligence Community.

Knowledge of the 's project management processes, procedures and tools.

Operations Analysis — Analyzing needs and product requirements to create a design.

Project planning and management skills, including scope of work, time estimation, and resource assignment.

Strong analytical and conceptual skills; ability to create original concepts/theories for various projects.

Strong interpersonal skills to resolve problems in a professional manner, lead working groups, negotiate and create consensus.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Data base user interface and query software — Database software; Microsoft Access

MS Office Suite

Markup language – HTML

Metric Tool

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Systems Integrator - Developmental

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/6/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Responsible for maintaining integrity of systems-of-systems by defining requirements architecture (consistent with the Enterprise Architecture (EA), (described in 1.0 above) and interfaces. Plans, implements, tests, documents, and maintains solutions to total systems or subsystems using internally created and/or commercial off-the-shelf products. Provides end-to-end project management support of the life cycle. Provides a total systems perspective including a technical understanding of relationships, dependencies and requirements of hardware and software components. Coordinates with other team members and ensures problem solution, appropriate risk reduction, and user satisfaction. Makes recommendations, if needed, on test and evaluation strategies for major systems' installations.
Analyses, designs, tests, and evaluates network systems such as satellite networks, local area networks (LANs), wide area networks (WANs), the Internet, intranets, and other data communications systems ranging from a connection between two offices in the same building to globally distributed networks, voice mail, and e-mail systems of a multinational organization. Performs network modeling, analysis, and planning including research related products and make necessary hardware and software recommendations.
Installs, configures, and supports an organization's local area network (LAN), wide area network (WAN), and Internet system or a segment of a network system. Maintains network hardware and software. Monitors network to ensure network availability to all system users and perform necessary maintenance to support network availability. May supervise other network support and client server specialists and plan, coordinate, and implement network security measures.
Ensures that adequate and appropriate planning is provided for hardware and communications for facilities. Prepares engineering plans and site installation technical design packages. Provides coordination in the analysis, acquisition and installation of hardware and software. Manages efforts of a staff engaged in facility additions, moves or changes including analysis, telecommunications (LAN, WAN, voice, video) planning, cabling, IT requirements, etc. Performs site surveys. Assesses and documents current site network configuration and user requirements.

Short Summary:

Responsible for maintaining integrity of systems-of-systems by defining requirements architecture (consistent with the Enterprise Architecture (EA), (described in 1.0 above) and interfaces. Plans, implements, tests, documents, and maintains solutions to total systems or subsystems using internally created and/or commercial off-the-shelf products. Provides end-to-end project management support of the life cycle. Provides a total systems perspective including a technical understanding of relationships, dependencies and requirements of hardware and software components. Coordinates with other team members and ensures problem solution, appropriate risk reduction, and user satisfaction. Makes recommendations, if needed, on test and evaluation strategies for major systems' installations.

Duties, Tasks, and Responsibilities

Analyze equipment performance records to determine the need for repair or replacement.

Confer with network users about how to solve existing system problems.

Consult customers, visit workplaces or conduct surveys to determine present and future user needs.

Coordinate with vendors and with company personnel to facilitate purchases.

Design, configure, and test computer hardware, networking software and operating system software.

Diagnose hardware and software problems, and replace defective components.

Ensure coordination and information flow occurs between all programs and organizational managers.

Establish functional and technical specifications and standards, solve hardware and software interface problems, define input/output parameters, and ensure integration of the entire systems or subsystem.

Estimate software-testing costs and schedule.

Gather data pertaining to customer needs, and use the information to identify, predict, interpret, and evaluate system and network requirements.

Identify and analyze all or part of a component's existing or new peripheral, network, and telecommunications systems requirements, taking into consideration the special technology needs.

Load computer tapes and disks, and install software and printer paper or forms.

Maintain an inventory of parts for emergency repairs.

Maintain and administer computer networks and related computing environments including computer hardware, systems software, applications software, and all configurations.

Maintain logs related to network functions, as well as maintenance and repair records.

Manage and update the master schedule.

Monitor network performance to determine whether adjustments need to be made, and to determine where changes will need to be made in the future.

Operate master consoles to monitor the performance of computer systems and networks, and to coordinate computer network access and use.

Perform data backups and disaster recovery operations.

Perform routine network startup and shutdown procedures, and maintain control records.

Plan, coordinate, and implement network security measures to protect data, software, and hardware.

Prepare milestone status reports and deliveries/presentations on the system test and evaluation concept to colleagues, subordinates, and end user representatives.

Provide direction to test and evaluation support staff.

Provide frequent contact with customers, traceability within program documents, and the overall computing environment and architecture.

Recommend changes to improve systems and network configurations, and determine hardware or software requirements related to such changes.

Research new technology, and implement it or recommend its implementation.

Test and evaluate hardware and software to determine efficiency, reliability, and compatibility with existing system, and make purchase recommendations.

Train people in computer system use.

Work with other engineers, systems analysts, programmers, technicians, scientists and top-level managers in the design, testing and evaluation of systems.

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Selective Attention — The ability to concentrate on a task over a period of time without being distracted.

Speaking — Talking to others to convey information effectively.

Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.

Time Management — Managing one's own time and the time of others.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Administration software — Cisco Systems CiscoWorks; Element management software; Network management software; Network shutdown software

Configuration management software — Application management software; Automated installation software; Patch and update management software; Systems and applications migration software

Network monitoring software — Ethereal; Multi-router traffic grapher MRTG software; Veritas NerveCenter; ZABBIX software

Network security or virtual private network VPN management software — Intrusion prevention system IPS software; Network and system vulnerability assessment software; OpenService Open NerveCenter; Security incident handling software

Transaction security and virus protection software — Encryption software; Packet filter software; Ping software; Root kit detection software

Tools

Cable accessories — Cable verifiers

Interferometers — Optical spectrum analyzers

Network analyzers — Asynchronous transfer mode ATM analyzers; Bit error rate BER testers; Synchronous optical network SONET analyzers; T-Birds

Power meters — Powerline monitors

Protocol analyzers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Selective Attention — The ability to concentrate on a task over a period of time without being distracted.

Speaking — Talking to others to convey information effectively.

Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.

Time Management — Managing one's own time and the time of others.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Administration software — Cisco Systems CiscoWorks; Element management software; Network management software; Network shutdown software

Configuration management software — Application management software; Automated installation software; Patch and update management software; Systems and applications migration software

Network monitoring software — Ethereal; Multi-router traffic grapher MRTG software; Veritas NerveCenter; ZABBIX software

Network security or virtual private network VPN management software — Intrusion prevention system IPS software; Network and system vulnerability assessment software; OpenService Open NerveCenter; Security incident handling software

Transaction security and virus protection software — Encryption software; Packet filter software; Ping software; Root kit detection software

Tools

Cable accessories — Cable verifiers

Interferometers — Optical spectrum analyzers

Network analyzers — Asynchronous transfer mode ATM analyzers; Bit error rate BER testers; Synchronous optical network SONET analyzers; T-Birds

Power meters — Powerline monitors

Protocol analyzers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Systems Integrator - Manager

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/6/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Responsible for maintaining integrity of systems-of-systems by defining requirements architecture (consistent with the Enterprise Architecture (EA), (described in 1.0 above) and interfaces. Plans, implements, tests, documents, and maintains solutions to total systems or subsystems using internally created and/or commercial off-the-shelf products. Provides end-to-end project management support of the life cycle. Provides a total systems perspective including a technical understanding of relationships, dependencies and requirements of hardware and software components. Coordinates with other team members and ensures problem solution, appropriate risk reduction, and user satisfaction. Makes recommendations, if needed, on test and evaluation strategies for major systems' installations.

Analyses, designs, tests, and evaluates network systems such as satellite networks, local area networks (LANs), wide area networks (WANs), the Internet, intranets, and other data communications systems ranging from a connection between two offices in the same building to globally distributed networks, voice mail, and e-mail systems of a multinational organization. Performs network modeling, analysis, and planning including research related products and make necessary hardware and software recommendations.

Installs, configures, and supports an organization's local area network (LAN), wide area network (WAN), and Internet system or a segment of a network system. Maintains network hardware and software. Monitors network to ensure network availability to all system users and perform necessary maintenance to support network availability. May supervise other network support and client server specialists and plan, coordinate, and implement network security measures.

Ensures that adequate and appropriate planning is provided for hardware and communications for facilities. Prepares engineering plans and site installation technical design packages. Provides coordination in the analysis, acquisition and installation of hardware and software. Manages efforts of a staff engaged in facility additions, moves or changes including analysis, telecommunications (LAN, WAN, voice, video) planning, cabling, IT requirements, etc. Performs site surveys. Assesses and documents current site network configuration and user requirements.

Short Summary:

Responsible for maintaining integrity of systems-of-systems by defining requirements architecture (consistent with the Enterprise Architecture (EA), (described in 1.0 above) and interfaces. Plans, implements, tests, documents, and maintains solutions to total systems or subsystems using internally created and/or commercial off-the-shelf products. Provides end-to-end project management support of the life cycle. Provides a total systems perspective including a technical understanding of relationships, dependencies and requirements of hardware and software components. Coordinates with other team members and ensures problem solution, appropriate risk reduction, and user satisfaction. Makes recommendations, if needed, on test and evaluation strategies for major systems' installations.

Duties, Tasks, and Responsibilities

Analyze equipment performance records to determine the need for repair or replacement.

Confer with network users about how to solve existing system problems.

Consult customers, visit workplaces or conduct surveys to determine present and future user needs.

Coordinate with vendors and with company personnel to facilitate purchases.

Design, configure, and test computer hardware, networking software and operating system software.

Diagnose hardware and software problems, and replace defective components.

Ensure coordination and information flow occurs between all programs and organizational managers.

Establish functional and technical specifications and standards, solve hardware and software interface problems, define input/output parameters, and ensure integration of the entire systems or subsystem.

Estimate software-testing costs and schedule.

Gather data pertaining to customer needs, and use the information to identify, predict, interpret, and evaluate system and network requirements.

Identify and analyze all or part of a component's existing or new peripheral, network, and telecommunications systems requirements, taking into consideration the special technology needs.

Load computer tapes and disks, and install software and printer paper or forms.

Maintain an inventory of parts for emergency repairs.

Maintain and administer computer networks and related computing environments including computer hardware, systems software, applications software, and all configurations.

Maintain logs related to network functions, as well as maintenance and repair records.

Manage and update the master schedule.

Monitor network performance to determine whether adjustments need to be made, and to determine where changes will need to be made in the future.

Operate master consoles to monitor the performance of computer systems and networks, and to coordinate computer network access and use.

Perform data backups and disaster recovery operations.

Perform routine network startup and shutdown procedures, and maintain control records.

Plan, coordinate, and implement network security measures to protect data, software, and hardware.

Prepare milestone status reports and deliveries/presentations on the system test and evaluation concept to colleagues, subordinates, and end user representatives.

Provide direction to test and evaluation support staff.

Provide frequent contact with customers, traceability within program documents, and the overall computing environment and architecture.

Recommend changes to improve systems and network configurations, and determine hardware or software requirements related to such changes.

Research new technology, and implement it or recommend its implementation.

Test and evaluate hardware and software to determine efficiency, reliability, and compatibility with existing system, and make purchase recommendations.

Train people in computer system use.

Work with other engineers, systems analysts, programmers, technicians, scientists and top-level managers in the design, testing and evaluation of systems.

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Administration software — Cisco Systems CiscoWorks; Element management software; Network management software; Network shutdown software

Configuration management software — Application management software; Automated installation software; Patch and update management software; Systems and applications migration software

Network monitoring software — Ethereal; Multi-router traffic grapher MRTG software; Veritas NerveCenter; ZABBIX software

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Selective Attention — The ability to concentrate on a task over a period of time without being distracted.

Speaking — Talking to others to convey information effectively.

Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.

Time Management — Managing one's own time and the time of others.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Administration software — Cisco Systems CiscoWorks; Element management software; Network management software; Network shutdown software

Configuration management software — Application management software; Automated installation software; Patch and update management software; Systems and applications migration software

Network monitoring software — Ethereal; Multi-router traffic grapher MRTG software; Veritas NerveCenter; ZABBIX software

Network security or virtual private network VPN management software — Intrusion prevention system IPS software; Network and system vulnerability assessment software; OpenService Open NerveCenter; Security incident handling software

Transaction security and virus protection software — Encryption software; Packet filter software; Ping software; Root kit detection software

Tools

Cable accessories — Cable verifiers

Interferometers — Optical spectrum analyzers

Network analyzers — Asynchronous transfer mode ATM analyzers; Bit error rate BER testers; Synchronous optical network SONET analyzers; T-Birds

Power meters — Powerline monitors

Protocol analyzers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Systems Operations Specialist - Developmental

Skill Community: Enterprise IT

Labor Group: Administration

Job Classification: Contractor

Status: Active

Date Effective: 11/1/2012

Standard Occupational Code:
[15-1121] Computer Systems Analysts

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Positions work independently with minimal supervision, receiving specific guidance and supervision when needed or provide technical leadership and/or supervision to teams of specialists as required. Positions perform routine computer operations and maintenance (O&M) tasks and/or work on operating systems software and its successful integration with the hardware and applications software. These positions could provide 24x7 operational support depending on position requirements within the organization. Additionally, positions independently research and resolve routine O&M problems; assist in the resolution of complex O&M problems; execute standard operating procedures (SOPs) and schedules for O&M activities; and may provide written input into the development and documentation of SOPs and schedules for O&M activities. Dependent on the job, specialists may assist in the integration, installation, testing and maintenance of specific software relating system environments. With engineering guidance, positions install new server software components using established procedures; maintenance of operating configurations and software configurations.

Short Summary:
Positions work independently with minimal supervision, receiving specific guidance and supervision when needed or provide technical leadership and/or supervision to teams of specialists as required. Positions perform routine computer operations and maintenance (O&M) tasks and/or work on operating systems software and its successful integration with the hardware and applications software. These positions could provide 24x7 operational support depending on position requirements within the organization. Additionally, positions independently research and resolve routine O&M problems; assist in the resolution of complex O&M problems; execute standard operating procedures (SOPs) and schedules for O&M activities; and may provide written input into the development and documentation of SOPs and schedules for O&M activities. Dependent on the job, specialists may assist in the integration, installation, testing and maintenance of specific software relating system environments. With engineering guidance, positions install new server software components using established procedures; maintenance of operating configurations and software configurations.

Duties, Tasks, and Responsibilities

Assists higher level software system specialists in managing software life cycles.

Assists in the installation and maintenance of the CWE operating configurations on all organization servers and desktops, working under close guidance.

Assists in the management of software life cycles.

Assists in the planning, integration, installation, and testing of new and upgraded versions of the relevant operating (Windows/UNIX) systems on organization computer systems, all third-party software components (VMWare), and subsystems

Maintains and updates documentation on the operating systems configuration for all assigned projects.

Manages software life cycles

Performs project management duties, such as scheduling and review processes.

Plans, tests, installs, and integrates new and upgraded versions of the relevant operating systems on organizational computer systems, all third-party software components, and subsystems.

Provides technical support to applications and utility developers on requirements for integration into the operating environment

Researches and resolves complex systems software problems efficiently and accurately while adhering to internal software management standards and procedures

Researches and resolves routine systems software problems, working with higher-level specialists.

Resolves routine problems that may involve applications and the network

Serves as technical referent on engineering review boards considering all additions to or changes to the operating environment.

Knowledge, Skills, and Abilities

Ability to articulate technical concepts to technical and lay staff.

Ability to develop and present complex correspondence, technical documents, briefings and reports.

Ability to diagnose and resolve routine technical problems by using various utility applications.

Ability to effectively function in a multi-system and/or multi-application environment.

Ability to lead technical teams and/or serve as technical resource to a co-workers and external components

Ability to research the latest technological developments in the relevant operating systems to identify impact on organization operating systems and to anticipate changes.

Ability to understand the organization standards for operating configurations, security constraints, and procedures for managing organization software.

Ability to work as part of a team.

Ability to work independently on routine tasks

Ability to work with developers and customers to elicit requirements.

Ability to work with system developers to elicit requirements and engage in joint project planning.

Considerable knowledge of Contracting Officer's Technical Representative concepts and principles.

Considerable knowledge of operating systems, organization's operating environment, network requirements, and ability to anticipate impact on respective operating systems

Demonstrated ability to effectively function in a multi-system and/or multi-application environment.

Demonstrated strong oral and written communication skills in order to articulately express complex technical concepts to both technical and non-technical audiences.

Effective project management skills.

Excellent analytical, planning, and organizational skills.

Excellent problem solving capability, (e.g., ability to independently diagnose and resolve complex technical problems.)

Expert knowledge of EIT and supported utility and security applications.

Expert knowledge of MVS, UNIX, LINUX and Windows technology

Understanding of basic project management techniques to plan and execute projects within the position's responsibility.

Working knowledge of Project Management concepts and principles.

Working knowledge of existing server technologies, Linux, UNIX, or Windows operating systems, as required by individual position

Working knowledge of multiple specialties such as operating systems, e-mail or database platforms, storage technologies, or hardware support

Minimum Education

• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Systems Operations Specialist - Senior

Skill Community: Enterprise IT

Labor Group: Administration

Job Classification: Contractor

Status: Active

Date Effective: 5/31/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Positions work independently with minimal supervision, receiving specific guidance and supervision when needed or provide technical leadership and/or supervision to teams of specialists as required. Positions perform routine computer operations and maintenance (O&M) tasks and/or work on operating systems software and its successful integration with the hardware and applications software. These positions could provide 24x7 operational support depending on position requirements within the organization. Additionally, positions independently research and resolve routine O&M problems; assist in the resolution of complex O&M problems; execute standard operating procedures (SOPs) and schedules for O&M activities; and may provide written input into the development and documentation of SOPs and schedules for O&M activities. Dependent on the job, specialists may assist in the integration, installation, testing and maintenance of specific software relating system environments. With engineering guidance, positions install new server software components using established procedures; maintenance of operating configurations and software configurations.

With engineering guidance, positions install new server software components using established procedures; maintenance of operating configurations and software configurations.

Duties, Tasks, and Responsibilities

Assists higher level software system specialists in managing software life cycles.

Assists in the installation and maintenance of the CWE operating configurations on all organization servers and desktops, working under close guidance.

Assists in the management of software life cycles.

Assists in the planning, integration, installation, and testing of new and upgraded versions of the relevant operating (Windows/UNIX) systems on organization computer systems, all third-party software components (VMWare), and subsystems

Maintains and updates documentation on the operating systems configuration for all assigned projects.

Manages software life cycles

Performs project management duties, such as scheduling and review processes.

Plans, tests, installs, and integrates new and upgraded versions of the relevant operating systems on organizational computer systems, all third-party software components, and subsystems.

Provides technical support to applications and utility developers on requirements for integration into the operating environment

Researches and resolves complex systems software problems efficiently and accurately while adhering to internal software management standards and procedures

Researches and resolves routine systems software problems, working with higher-level specialists.

Resolves routine problems that may involve applications and the network

Serves as technical referent on engineering review boards considering all additions to or changes to the operating environment.

Knowledge, Skills, and Abilities

Ability to articulate technical concepts to technical and lay staff.

Ability to develop and present complex correspondence, technical documents, briefings and reports.

Ability to diagnose and resolve routine technical problems by using various utility applications.

Ability to effectively function in a multi-system and/or multi-application environment.

Ability to lead technical teams and/or serve as technical resource to a co-workers and external components

Ability to research the latest technological developments in the relevant operating systems to identify impact on organization operating systems and to anticipate changes.

Ability to understand the organization standards for operating configurations, security constraints, and procedures for managing organization software.

Ability to work as part of a team.

Ability to work independently on routine tasks

Ability to work with developers and customers to elicit requirements.

Ability to work with system developers to elicit requirements and engage in joint project planning.

Considerable knowledge of Contracting Officer's Technical Representative concepts and principles.

Considerable knowledge of operating systems, organization's operating environment, network requirements, and ability to anticipate impact on respective operating systems

Demonstrated ability to effectively function in a multi-system and/or multi-application environment.

Demonstrated strong oral and written communication skills in order to articulately express complex technical concepts to both technical and non-technical audiences.

Effective project management skills.

Excellent analytical, planning, and organizational skills.

Excellent problem solving capability, (e.g., ability to independently diagnose and resolve complex technical problems.)

Expert knowledge of EIT and supported utility and security applications.

Expert knowledge of MVS, UNIX, LINUX and Windows technology

Understanding of basic project management techniques to plan and execute projects within the position's responsibility.

Working knowledge of Project Management concepts and principles.

Working knowledge of existing server technologies, Linux, UNIX, or Windows operating systems, as required by individual position

Working knowledge of multiple specialties such as operating systems, e-mail or database platforms, storage technologies, or hardware support

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Telecommunications Business Officer - Developmental

Skill Community: Enterprise IT

Labor Group: Project Management

Job Classification: Contractor

Status: Active

Date Effective: 5/30/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Telecommunications Business Officers: (TCOM) serve as the customer service points of contact for the telecommunications services within the and with external vendors. TCOM: primary responsibilities include managing contracts with external telecommunication vendors for products and services; reconciling vendor billing statements with internal billing systems to ensure accuracy of bills and approving and scheduling payments to vendors; working closely with project managers to gather and translate customer telecommunication requirements into Service Level Agreements (SLA); and managing the day-to-day research and resolution of customer comments, questions, and concerns for all telecommunication services providing technical guidance and direction to customers. Based on assignment, TCOMs:FP may also be responsible for oversight and management of the SLAs with other components. TCOM: work is performed in a team environment; officers may provide guidance to more junior team members.

Short Summary:

Telecommunications Business Officers: Full Performance (TCOMs:) serve as the customer service points of contact for the telecommunications services within the and with external vendors. TCOM: primary responsibilities include managing contracts with external telecommunication vendors for products and services; reconciling vendor billing statements with internal billing systems to ensure accuracy of bills and approving and scheduling payments to vendors; working closely with project managers to gather and translate customer telecommunication requirements into Service Level Agreements (SLA); and managing the day-to-day research and resolution of customer comments, questions, and concerns for all telecommunication services providing technical guidance and direction to customers. TCOM: work is performed in a team environment; officers may provide guidance to more junior team members.

Duties, Tasks, and Responsibilities

Participates in the Business Information Forum and Activity Based Costing Exercises – provide data for the preparation of cost and budget estimates for the coming year.

Prepare, review and send customers' billing statements.

Provides excellent customer service for assigned accounts.

Provides general guidance/mentoring to team members; may review the work of colleagues or more junior officers.

Reconciles vendor billing statements with internal billing systems.

Works closely with the Finance Officer when preparing and analyzing SLAs or customers' billing statements.

Knowledge, Skills, and Abilities

Ability to adapt quickly to emerging issues, priorities, and a changing work environment and respond to tasking under short and changing deadlines.

Ability to analyze multiple, complex pieces of information to form logical, sound conclusions about its value, importance, or accuracy.

Ability to analyze situations and negotiate win-win solutions for customers and the enterprise.

Ability to develop technical alternatives to improve the efficiency of processing invoices.

Ability to elicit information on moderately complex problems from non-technical customers for use in diagnosis, analysis, and resolution of problems.

Ability to evaluate vendor and financial (accounting, billing, revenue, etc.) data and customer requirements, resolve discrepancies, and propose innovative solutions to challenging problems.

Ability to function successfully as a part of a team.

Ability to interact with customers at all levels in the , Intelligence Community and Vendor community to effectively resolve issues/problems in a fast paced, high-pressure environment.

Ability to manage multiple competing priorities or projects, simultaneously.

Ability to provide clear answers to inquiries from vendors, customers and component managers regarding telecommunication products and services.

Ability to work independently, using sound judgment to make decisions.

Basic knowledge of Project Management concepts and principles.

Excellent organizational skills and attention to detail.

Knowledge of Fee for Services Business model or Working Capital Fund concepts.

Knowledge of available telecommunication products and services.

Knowledge of rules of governance and project lifecycle methodologies.

Knowledge of telecommunication products and services, in order to explain to customers the different telecommunication products and services available.

Strong interpersonal and communication (written and oral) skills for interaction with customers and colleagues and the ability to communicate complex technical information to varied audiences.

Working knowledge of financial processing vehicles (i.e., ACQUIRE, SLAMS).

Working knowledge of tools/systems to assist in analysis of issues (EXCEL, PHONBILL, CTMS, STATS).

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

Ability to interact with customers at all levels in the , Intelligence Community and Vendor community to effectively resolve issues/problems in a fast paced, high-pressure environment.

Ability to manage multiple competing priorities or projects, simultaneously.

Ability to provide clear answers to inquiries from vendors, customers and component managers regarding telecommunication products and services.

Ability to work independently, using sound judgment to make decisions.

Basic knowledge of Project Management concepts and principles.

Excellent organizational skills and attention to detail.

Knowledge of Fee for Services Business model or Working Capital Fund concepts.

Knowledge of available telecommunication products and services.

Knowledge of rules of governance and project lifecycle methodologies.

Knowledge of telecommunication products and services, in order to explain to customers the different telecommunication products and services available.

Strong interpersonal and communication (written and oral) skills for interaction with customers and colleagues and the ability to communicate complex technical information to varied audiences.

Working knowledge of financial processing vehicles (i.e., ACQUIRE, SLAMS).

Working knowledge of tools/systems to assist in analysis of issues (EXCEL, PHONBILL, CTMS, STATS).

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Telecommunications Business Officer - Manager

Skill Community: Enterprise IT

Labor Group: Project Management

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Telecommunications Business Officers:(TCOMs:) serve as the customer service points of contact for the telecommunications services within the and with external vendors. TCOM: primary responsibilities include managing contracts with external telecommunication vendors for products and services; reconciling vendor billing statements with internal billing systems to ensure accuracy of bills and approving and scheduling payments to vendors; working closely with project managers to gather and translate customer telecommunication requirements into Service Level Agreements (SLA); and managing the day-to-day research and resolution of customer comments, questions, and concerns for all telecommunication services providing technical guidance and direction to customers. Based on assignment, TCOMs: may also be responsible for oversight and management of the SLAs with other components. TCOM: work is performed in a team environment; officers may provide guidance to more junior team members.

Short Summary:

Telecommunications Business Officers: (TCOMs:) serve as the customer service points of contact for the telecommunications services within the and with external vendors. Duties, Tasks, and Responsibilities

Participates in the Business Information Forum and Activity Based Costing Exercises – provide data for the preparation of cost and budget estimates for the coming year.

Prepare, review and send customers' billing statements.

Provides excellent customer service for assigned accounts.

Provides general guidance/mentoring to team members; may review the work of colleagues or more junior officers.

Reconciles vendor billing statements with internal billing systems.

Works closely with the Finance Officer when preparing and analyzing SLAs or customers' billing statements.

Knowledge, Skills, and Abilities

Ability to adapt quickly to emerging issues, priorities, and a changing work environment and respond to tasking under short and changing deadlines.

Ability to analyze multiple, complex pieces of information to form logical, sound conclusions about its value, importance, or accuracy.

Ability to analyze situations and negotiate win-win solutions for customers and the enterprise.

Ability to develop technical alternatives to improve the efficiency of processing invoices.

Ability to elicit information on moderately complex problems from non-technical customers for use in diagnosis, analysis, and resolution of problems.

Ability to evaluate vendor and financial (accounting, billing, revenue, etc.) data and customer requirements, resolve discrepancies, and propose innovative solutions to challenging problems.

Ability to function successfully as a part of a team.

Ability to interact with customers at all levels in the , Intelligence Community and Vendor community to effectively resolve issues/problems in a fast paced, high-pressure environment.

Ability to manage multiple competing priorities or projects, simultaneously.

Ability to provide clear answers to inquiries from vendors, customers and component managers regarding telecommunication products and services.

Ability to work independently, using sound judgment to make decisions.

Basic knowledge of Project Management concepts and principles.

Excellent organizational skills and attention to detail.

Knowledge of Fee for Services Business model or Working Capital Fund concepts.

Knowledge of available telecommunication products and services.

Knowledge of rules of governance and project lifecycle methodologies.

Knowledge of telecommunication products and services, in order to explain to customers the different telecommunication products and services available.

Strong interpersonal and communication (written and oral) skills for interaction with customers and colleagues and the ability to communicate complex technical information to varied audiences.

Working knowledge of financial processing vehicles (i.e., ACQUIRE, SLAMS).

Telecommunications Specialist-ES - Developmental

Skill Community: Enterprise IT

Labor Group: TISO

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:
[49-2020] Radio and Telecommunications Equipment Installers and Repairers
[49-2020] Radio and Telecommunications Equipment Installers and Repairers

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Engineering Specialists (ES) work as part of a multi-disciplined, diversified and fast-paced team responsible for installing, configuring, operating, maintaining and troubleshooting utility support equipment. They are responsible for a broad range of duties to include training and guiding field personnel on a variety of equipment, including diesel generators and related electrical support equipment; heating, ventilating and air conditioning equipment (HVAC); plumbing systems; power distribution equipment and grids; uninterruptible power systems; isolated power systems and grids; and MRI shielded enclosures.

Short Summary:

Engineering Specialists (ES) work as part of a multi-disciplined, diversified and fast-paced team responsible for installing, configuring, operating, maintaining and troubleshooting utility support equipment. They are responsible for a broad range of duties to include training and guiding field personnel on a variety of equipment, including diesel generators and related electrical support equipment; heating, ventilating and air conditioning equipment (HVAC); plumbing systems; power distribution equipment and grids; uninterruptible power systems; isolated power systems and grids; and MRI shielded enclosures.

Duties, Tasks, and Responsibilities

Maintain technical and medical eligibility to serve worldwide to meet the needs of the mission.

Provide communications security guidance and support.

Provide support for, and maintenance of, applications software.

Provide troubleshooting assistance for carrier systems, customer premises equipment or utility equipment (diesel generators, chilled water systems, air handlers, electrical switchgear, etc.).

Knowledge, Skills, and Abilities

Ability to work collaboratively across organizational boundaries.

Administration and Management — awareness of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

COMSEC - in-depth knowledge of policies and regulations, with a particular focus on communications security

Communications - ability to communicate complex issues to technical staff, customers, and senior management

Computers and Electronics — general knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking - use logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer Service – committed to providing the highest levels of customer service; understand and respond to the customer's requirements.

Customer and Personal Service — knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Equipment Selection - Determining the kind of tools and equipment needed to do a job..

Installation — install equipment, machines, wiring, or programs to meet specifications; plan, direct, and perform highly specialized technical projects

Installations - demonstrated high-level proficiency in leading and performing installations, modifications, and upgrades of highly specialized equipment and systems.

Liaison - extensive knowledge of Liaison Requirements

Management – can direct; provide feedback; and, manage workflow

Mathematics — general knowledge of mathematical principles.

Mechanical — general knowledge of machines and tools

Mission Awareness - organizational knowledge and understanding of the broader mission

Project Management – knowledge of project management; can utilize project management framework to ensure success

Repairing - repair machines or systems using the needed tools..

Tactical systems - extensive knowledge of a wide variety of tactical systems

Telecommunications — extensive knowledge on a variety of telecommunications platforms and IT systems.

Time Management - managing one's own time and the time of others.

Travel readiness – maintain eligibility to travel wherever the needs of the mission dictate.

Troubleshooting – can test, identify, and resolve the most difficult equipment and system problems

Utility systems - extensive knowledge of station and base electrical, mechanical, and utility systems; can install, operate and maintain basic and portable utility systems

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Markup language – HTML

Spreadsheet software — Microsoft Excel

Word Processor – MS Word

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Tools

Electronic measuring probes — Current probes; Voltage probes

Multimeters — Signal measuring equipment

Optical Time Domain Reflectometer - OTDR

Packet analyzer such as SNIFFER

Soldering irons or guns — Soldering equipment

Soldering or desoldering or combined stations — Soldering stations

Spectrum analyzer

Standard tool kits (e.g. JTK-17)

Voltage or current meters — Digital voltmeters DVM; Voltage testers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Repairing - repair machines or systems using the needed tools..

Tactical systems - extensive knowledge of a wide variety of tactical systems

Telecommunications — extensive knowledge on a variety of telecommunications platforms and IT systems.

Time Management - managing one's own time and the time of others.

Travel readiness – maintain eligibility to travel wherever the needs of the mission dictate.

Troubleshooting – can test, identify, and resolve the most difficult equipment and system problems

Utility systems - extensive knowledge of station and base electrical, mechanical, and utility systems; can install, operate and maintain basic and portable utility systems

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Markup language – HTML

Spreadsheet software — Microsoft Excel

Word Processor – MS Word

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Tools

Electronic measuring probes — Current probes; Voltage probes

Multimeters — Signal measuring equipment

Optical Time Domain Reflectometer - OTDR

Packet analyzer such as SNIFFER

Soldering irons or guns — Soldering equipment

Soldering or desoldering or combined stations — Soldering stations

Spectrum analyzer

Standard tool kits (e.g. JTK-17)

Voltage or current meters — Digital voltmeters DVM; Voltage testers

Work Environment

The work environment varies from an office environment to working in an environment that may include exposure to drafts, noise, dust, grease, dirt, and standing water as well as temperature extremes and inclement weather. Employees may experience extended periods of standing, walking, climbing, bending, crouching, and lifting light to very heavy objects and equipment. Use of ladders or scaffolding may be required with the use of required safety equipment. Employees may be exposed to potential health hazards.

Duties of TISO officers include being able to single-handedly deploy systems weighing up to 60 pounds. TISOs must also be prepared for prolonged use of destruction equipment (e.g., sledge-hammers, nail guns, disintegrators, and degaussers) and the removal of equipment from racks where servers may weigh as much as 75 pounds.

Supervision Received and Given

Telecommunications Specialist-ES - Full Performance

Skill Community: Enterprise IT

Labor Group: TISO

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:
 [49-2020] Radio and Telecommunications Equipment Installers and Repairers
 [49-2020] Radio and Telecommunications Equipment Installers and Repairers

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Engineering Specialists (ES) work as part of a multi-disciplined, diversified and fast-paced team responsible for installing, configuring, operating, maintaining and troubleshooting utility support equipment. They are responsible for a broad range of duties to include training and guiding field personnel on a variety of equipment, including diesel generators and related electrical support equipment; heating, ventilating and air conditioning equipment (HVAC); plumbing systems; power distribution equipment and grids; uninterruptible power systems; isolated power systems and grids; and MRI shielded enclosures.

Short Summary:

Engineering Specialists (ES) work as part of a multi-disciplined, diversified and fast-paced team responsible for installing, configuring, operating, maintaining and troubleshooting utility support equipment. They are responsible for a broad range of duties to include training and guiding field personnel on a variety of equipment, including diesel generators and related electrical support equipment; heating, ventilating and air conditioning equipment (HVAC); plumbing systems; power distribution equipment and grids; uninterruptible power systems; isolated power systems and grids; and MRI shielded enclosures.

Duties, Tasks, and Responsibilities

Maintain technical and medical eligibility to serve worldwide to meet the needs of the mission.

Provide communications security guidance and support.

Provide support for, and maintenance of, applications software.

Provide troubleshooting assistance for carrier systems, customer premises equipment or utility equipment (diesel generators, chilled water systems, air handlers, electrical switchgear, etc.).

Knowledge, Skills, and Abilities

Ability to work collaboratively across organizational boundaries.

Administration and Management — awareness of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

COMSEC - in-depth knowledge of policies and regulations, with a particular focus on communications security

Communications - ability to communicate complex issues to technical staff, customers, and senior management

Computers and Electronics — general knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking - use logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer Service – committed to providing the highest levels of customer service; understand and respond to the customer's requirements.

Customer and Personal Service — knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Equipment Selection - Determining the kind of tools and equipment needed to do a job..

Installation — install equipment, machines, wiring, or programs to meet specifications; plan, direct, and perform highly specialized technical projects

Installations - demonstrated high-level proficiency in leading and performing installations, modifications, and upgrades of highly specialized equipment and systems.

Liaison - extensive knowledge of Liaison Requirements

Management – can direct; provide feedback; and, manage workflow

Mathematics — general knowledge of mathematical principles.

Mechanical — general knowledge of machines and tools

Mission Awareness - organizational knowledge and understanding of the broader mission

Project Management – knowledge of project management; can utilize project management framework to ensure success

Repairing - repair machines or systems using the needed tools..

Tactical systems - extensive knowledge of a wide variety of tactical systems

Telecommunications — extensive knowledge on a variety of telecommunications platforms and IT systems.

Time Management - managing one's own time and the time of others.

Travel readiness – maintain eligibility to travel wherever the needs of the mission dictate.

Troubleshooting – can test, identify, and resolve the most difficult equipment and system problems

Utility systems - extensive knowledge of station and base electrical, mechanical, and utility systems; can install, operate and maintain basic and portable utility systems

Telecommunications — extensive knowledge on a variety of telecommunications platforms and IT systems.

Time Management - managing one's own time and the time of others.

Travel readiness – maintain eligibility to travel wherever the needs of the mission dictate.

Troubleshooting – can test, identify, and resolve the most difficult equipment and system problems

Utility systems - extensive knowledge of station and base electrical, mechanical, and utility systems; can install, operate and maintain basic and portable utility systems

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Telecommunications Information Systems Officers (TISOs) specializing in Field Engineering (F/E) provide system analysis and assessments of specialized telecommunications systems, networks, or components. F/E's also install, upgrade, modify, configure and document communications systems and can serve as the project manager on projects of various sizes and durations. The specialized systems include, but are not limited to, data communications, Local Area Networks (LAN), Wide Area Networks (WAN), UHF/VHF radio networks, terrestrial communication, and satellite/microwave communication capabilities.

Short Summary:
Telecommunications Information Systems Officers (TISOs) specializing in Field Engineering (F/E) provide system analysis and assessments of specialized telecommunications systems, networks, or components. F/E's also install, upgrade, modify, configure and document communications systems and can serve as the project manager on projects of various sizes and durations. The specialized systems include, but are not limited to, data communications, Local Area Networks (LAN), Wide Area Networks (WAN), UHF/VHF radio networks, terrestrial communication, and satellite/microwave communication capabilities.

Duties, Tasks, and Responsibilities

Installs, maintains, manages and/or repairs Local Area Networks (LANs) and their constituent components (workstations, servers, printers, associated cabling, etc.).

Installs, maintains, manages and/or repairs carrier systems (WANs) and their constituent components.

Maintain technical and medical eligibility to serve worldwide to meet the needs of the mission.

Provide communications security guidance and support.

Provide support for, and maintenance of, applications software.

Provide troubleshooting assistance for carrier systems, customer premises equipment or utility equipment (diesel generators, chilled water systems, air handlers, electrical switchgear, etc.).

Knowledge, Skills, and Abilities

Ability to work collaboratively across organizational boundaries.

Administration and Management — awareness of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

COMSEC - in-depth knowledge of policies and regulations, with a particular focus on communications security

Collaboration

Communications - ability to communicate complex issues to technical staff, customers, and senior management

Computers and Electronics — general knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking

Critical Thinking - use logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer Service – committed to providing the highest levels of customer service; understand and respond to the customer's requirements.

Customer and Personal Service — knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Equipment Selection - Determining the kind of tools and equipment needed to do a job..

Installation — install equipment, machines, wiring, or programs to meet specifications; plan, direct, and perform highly specialized technical projects

Installations - demonstrated high-level proficiency in leading and performing installations, modifications, and upgrades of highly specialized equipment and systems.

Integrity

Liaison - extensive knowledge of Liaison Requirements

Management – can direct; provide feedback; and, manage workflow

Manual Dexterity

Mathematics — general knowledge of mathematical principles.

Mechanical — general knowledge of machines and tools

Mission Awareness - organizational knowledge and understanding of the broader mission

Project Management – knowledge of project management; can utilize project management framework to ensure success

Repairing - repair machines or systems using the needed tools..

Tactical systems - extensive knowledge of a wide variety of tactical systems

Telecommunications — extensive knowledge on a variety of telecommunications platforms and IT systems.

Time Management - managing one's own time and the time of others.

Travel readiness – maintain eligibility to travel wherever the needs of the mission dictate.

Troubleshooting – can test, identify, and resolve the most difficult equipment and system problems

Utility systems - extensive knowledge of station and base electrical, mechanical, and utility systems; can install, operate and maintain basic and portable utility systems

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Markup language – HTML

Spreadsheet software — Microsoft Excel

Word Processor – MS Word

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Tools

Electronic measuring probes — Current probes; Voltage probes

Multimeters — Signal measuring equipment

Optical Time Domain Reflectometer - OTDR

Packet analyzer such as SNIFFER

Soldering irons or guns — Soldering equipment

Soldering or desoldering or combined stations — Soldering stations

Spectrum analyzer

Standard tool kits (e.g. JTK-17)

Voltage or current meters — Digital voltmeters DVM; Voltage testers

Work Environment

The work environment varies from an office environment to working in an environment that may include exposure to drafts, noise, dust, grease, dirt, and standing water as well as temperature extremes and inclement weather. Employees may experience extended periods of standing, walking, climbing, bending, crouching, and lifting light to very heavy objects and equipment. Use of ladders or scaffolding may be required with the use of required safety equipment. Employees may be exposed to potential health hazards.

Duties of TISO officers include being able to single-handedly deploy systems weighing up to 60 pounds. TISOs must also be prepared for prolonged use of destruction equipment (e.g., sledge-hammers, nail guns,

disintegrators, and degaussers) and the removal of equipment from racks where servers may weigh as much as 75 pounds.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Telecommunications Specialist-FE - Expert

Skill Community: Enterprise IT

Labor Group: TISO

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Equipment Selection - Determining the kind of tools and equipment needed to do a job..

Installation — install equipment, machines, wiring, or programs to meet specifications; plan, direct, and perform highly specialized technical projects

Installations - demonstrated high-level proficiency in leading and performing installations, modifications, and upgrades of highly specialized equipment and systems.

Integrity

Liaison - extensive knowledge of Liaison Requirements

Management – can direct; provide feedback; and, manage workflow

Manual Dexterity

Mathematics — general knowledge of mathematical principles.

Mechanical — general knowledge of machines and tools

Mission Awareness - organizational knowledge and understanding of the broader mission

Project Management – knowledge of project management; can utilize project management framework to ensure success

Repairing - repair machines or systems using the needed tools..

Tactical systems - extensive knowledge of a wide variety of tactical systems

Telecommunications — extensive knowledge on a variety of telecommunications platforms and IT systems.

Time Management - managing one's own time and the time of others.

Travel readiness – maintain eligibility to travel wherever the needs of the mission dictate.

Troubleshooting – can test, identify, and resolve the most difficult equipment and system problems

Utility systems - extensive knowledge of station and base electrical, mechanical, and utility systems; can install, operate and maintain basic and portable utility systems

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Markup language – HTML

Spreadsheet software — Microsoft Excel

Word Processor – MS Word

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Tools

Electronic measuring probes — Current probes; Voltage probes

Multimeters — Signal measuring equipment

Optical Time Domain Reflectometer - OTDR

Packet analyzer such as SNIFFER

Soldering irons or guns — Soldering equipment

Soldering or desoldering or combined stations — Soldering stations

Spectrum analyzer

Standard tool kits (e.g. JTK-17)

Voltage or current meters — Digital voltmeters DVM; Voltage testers

Work Environment

The work environment varies from an office environment to working in an environment that may include exposure to drafts, noise, dust, grease, dirt, and standing water as well as temperature extremes and inclement weather. Employees may experience extended periods of standing, walking, climbing, bending, crouching, and lifting light to very heavy objects and equipment. Use of ladders or scaffolding may be

required with the use of required safety equipment. Employees may be exposed to potential health hazards.

Duties of TISO officers include being able to single-handedly deploy systems weighing up to 60 pounds. TISOs must also be prepared for prolonged use of destruction equipment (e.g., sledge-hammers, nail guns, disintegrators, and degaussers) and the removal of equipment from racks where servers may weigh as much as 75 pounds.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Telecommunications Specialist-FE - Subject Matter Expert

Skill Community: Enterprise IT

Labor Group: TISO

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Telecommunications Information Systems Officers (TISOs) specializing in Field Engineering (F/E) provide system analyses and assessments of specialized telecommunications systems, networks, or components. F/E's also install, upgrade, modify, configure and document communications systems and can serve as the project manager on projects of various sizes and durations. The specialized systems include, but are not limited to, data communications, Local Area Networks (LAN), Wide Area Networks (WAN), UHF/VHF radio networks, terrestrial communication, and satellite/microwave communication capabilities.

Short Summary:

Telecommunications Information Systems Officers (TISOs) specializing in Field Engineering (F/E) provide system analyses and assessments of specialized telecommunications systems, networks, or components. F/E's also install, upgrade, modify, configure and document communications systems and can serve as the project manager on projects of various sizes and durations. The specialized systems include, but are not limited to, data communications, Local Area Networks (LAN), Wide Area Networks (WAN), UHF/VHF radio networks, terrestrial communication, and satellite/microwave communication capabilities.

Duties, Tasks, and Responsibilities

Installs, maintains, manages and/or repairs Local Area Networks (LANs) and their constituent components (workstations, servers, printers, associated cabling, etc.).

Installs, maintains, manages and/or repairs carrier systems (WANs) and their constituent components.

Maintain technical and medical eligibility to serve worldwide to meet the needs of the mission.

Provide communications security guidance and support.

Provide support for, and maintenance of, applications software.

Provide troubleshooting assistance for carrier systems, customer premises equipment or utility equipment (diesel generators, chilled water systems, air handlers, electrical switchgear, etc.).

Knowledge, Skills, and Abilities

Ability to work collaboratively across organizational boundaries.

Administration and Management — awareness of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

COMSEC - in-depth knowledge of policies and regulations, with a particular focus on communications security

Collaboration

Communications - ability to communicate complex issues to technical staff, customers, and senior management

Computers and Electronics — general knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking

Critical Thinking - use logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer Service – committed to providing the highest levels of customer service; understand and respond to the customer's requirements.

Customer and Personal Service — knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Equipment Selection - Determining the kind of tools and equipment needed to do a job..

Installation — install equipment, machines, wiring, or programs to meet specifications; plan, direct, and perform highly specialized technical projects

Installations - demonstrated high-level proficiency in leading and performing installations, modifications, and upgrades of highly specialized equipment and systems.

Integrity

Liaison - extensive knowledge of Liaison Requirements

Management – can direct; provide feedback; and, manage workflow

Manual Dexterity

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Markup language – HTML

Spreadsheet software — Microsoft Excel

Word Processor – MS Word

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Tools

Electronic measuring probes — Current probes; Voltage probes

Multimeters — Signal measuring equipment

Optical Time Domain Reflectometer - OTDR

Packet analyzer such as SNIFFER

Soldering irons or guns — Soldering equipment

Soldering or desoldering or combined stations — Soldering stations

Spectrum analyzer

Standard tool kits (e.g. JTK-17)

Voltage or current meters — Digital voltmeters DVM; Voltage testers

Work Environment

The work environment varies from an office environment to working in an environment that may include exposure to drafts, noise, dust, grease, dirt, and standing water as well as temperature extremes and inclement weather. Employees may experience extended periods of standing, walking, climbing, bending, crouching, and lifting light to very heavy objects and equipment. Use of ladders or scaffolding may be required with the use of required safety equipment. Employees may be exposed to potential health hazards.

Duties of TISO officers include being able to single-handedly deploy systems weighing up to 60 pounds. TISOs must also be prepared for prolonged use of destruction equipment (e.g., sledge-hammers, nail guns, disintegrators, and degaussers) and the removal of equipment from racks where servers may weigh as much as 75 pounds.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Telecommunications Specialist-OPS - Manager

Skill Community: Enterprise IT

Labor Group: TISO

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Telecommunications Information Systems Officers (TISOs) act as information distributors and customer representatives. They operate, maintain, and manage telecommunications facilities. TISOs also provide project management and systems integration for voice and data communication systems; supervise installation of these systems; and, provide maintenance and support to customers after installation. Specializations include voice transmission, data communications, TCP-IP networks, Local Area Networks (LAN), Wide Area Networks (WAN), COMSEC/TEMPEST, facsimile, cable-to-modem communication, RF (including satellite) communication capabilities, power systems, generators, digital/analog fault isolation and repair to least replaceable unit.

Short Summary:
Telecommunications Information Systems Officers (TISOs) act as information distributors and customer representatives. They operate, maintain, and manage telecommunications facilities. TISOs also provide project management and systems integration for voice and data communication systems; supervise installation of these systems; and, provide maintenance and support to customers after installation. Specializations include voice transmission, data communications, TCP-IP networks, Local Area Networks (LAN), Wide Area Networks (WAN), COMSEC/TEMPEST, facsimile, cable-to-modem communication, RF (including satellite) communication capabilities, power systems, generators, digital/analog fault isolation and repair to least replaceable unit.

Duties, Tasks, and Responsibilities

Installs, maintains, manages and/or repairs Local Area Networks (LANs) and their constituent components (workstations, servers, printers, associated cabling, etc.).

Installs, maintains, manages and/or repairs carrier systems (WANs) and their constituent components.

Maintain technical and medical eligibility to serve worldwide to meet the needs of the mission.

Provide communications security guidance and support.

Provide support for, and maintenance of, applications software.

Provide troubleshooting assistance for carrier systems, customer premises equipment or utility equipment (diesel generators, chilled water systems, air handlers, electrical switchgear, etc.).

Knowledge, Skills, and Abilities

Ability to work collaboratively across organizational boundaries.

Administration and Management — awareness of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

COMSEC - in-depth knowledge of policies and regulations, with a particular focus on communications security

Collaboration

Communications - ability to communicate complex issues to technical staff, customers, and senior management

Computers and Electronics — general knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking

Critical Thinking - use logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer Service – committed to providing the highest levels of customer service; understand and respond to the customer's requirements.

Customer and Personal Service — knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Equipment Selection - Determining the kind of tools and equipment needed to do a job..

Installation — install equipment, machines, wiring, or programs to meet specifications; plan, direct, and perform highly specialized technical projects

Installations - demonstrated high-level proficiency in leading and performing installations, modifications, and upgrades of highly specialized equipment and systems.

Integrity

Liaison - extensive knowledge of Liaison Requirements

Management – can direct; provide feedback; and, manage workflow

Manual Dexterity

Mathematics — general knowledge of mathematical principles.

Mechanical — general knowledge of machines and tools

Mission Awareness - organizational knowledge and understanding of the broader mission

Project Management – knowledge of project management; can utilize project management framework to ensure success

Repairing - repair machines or systems using the needed tools..

Tactical systems - extensive knowledge of a wide variety of tactical systems

Telecommunications — extensive knowledge on a variety of telecommunications platforms and IT systems.

Time Management - managing one's own time and the time of others.

Travel readiness – maintain eligibility to travel wherever the needs of the mission dictate.

Troubleshooting – can test, identify, and resolve the most difficult equipment and system problems

Utility systems - extensive knowledge of station and base electrical, mechanical, and utility systems; can install, operate and maintain basic and portable utility systems

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Voltage or current meters — Digital voltmeters DVM; Voltage testers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Telecommunications Specialist-TCS - Expert

Skill Community: Enterprise IT

Labor Group: TISO

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Tactical Communications Specialists (TCS) act as information distributors, customer representatives. They operate, maintain, install and manage telecommunications in non-traditional environments. TCS officers also provide project management and systems integration for voice and data communication systems; supervise installation of these systems; and, provide maintenance and support to customers after installation. Specializations include voice transmission, data communications, TCP-IP networks, Local Area Networks (LAN), Wide Area Networks (WAN), COMSEC/TEMPEST, facsimile, cable-to-modem communication, RF (including satellite) communication capabilities, power systems, generators, digital/analog fault isolation and repair to least replaceable unit.

Short Summary:

Tactical Communications Specialists (TCS) act as information distributors, customer representatives. They operate, maintain, install and manage telecommunications in non-traditional environments. TCS officers also provide project management and systems integration for voice and data communication systems; supervise installation of these systems; and, provide maintenance and support to customers after installation. Specializations include voice transmission, data communications, TCP-IP networks, Local Area Networks (LAN), Wide Area Networks (WAN), COMSEC/TEMPEST, facsimile, cable-to-modem communication, RF (including satellite) communication capabilities, power systems, generators, digital/analog fault isolation and repair to least replaceable unit.

Duties, Tasks, and Responsibilities

Installs, maintains, manages and/or repairs Local Area Networks (LANs) and their constituent components (workstations, servers, printers, associated cabling, etc.).

Installs, maintains, manages and/or repairs carrier systems (WANs) and their constituent components.

Maintain technical and medical eligibility to serve worldwide to meet the needs of the mission.

Provide communications security guidance and support.

Provide support for, and maintenance of, applications software.

Provide troubleshooting assistance for carrier systems, customer premises equipment or utility equipment (diesel generators, chilled water systems, air handlers, electrical switchgear, etc.).

Knowledge, Skills, and Abilities

Ability to work collaboratively across organizational boundaries.

Administration and Management — awareness of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

COMSEC - in-depth knowledge of policies and regulations, with a particular focus on communications security

Collaboration

Communications - ability to communicate complex issues to technical staff, customers, and senior management

Computers and Electronics — general knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking

Critical Thinking - use logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer Service – committed to providing the highest levels of customer service; understand and respond to the customer's requirements.

Customer and Personal Service — knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Equipment Selection - Determining the kind of tools and equipment needed to do a job..

Installation — install equipment, machines, wiring, or programs to meet specifications; plan, direct, and perform highly specialized technical projects

Installations - demonstrated high-level proficiency in leading and performing installations, modifications, and upgrades of highly specialized equipment and systems.

Integrity

Liaison - extensive knowledge of Liaison Requirements

Management – can direct; provide feedback; and, manage workflow

Manual Dexterity

Mathematics — general knowledge of mathematical principles.

Mechanical — general knowledge of machines and tools

Mission Awareness - organizational knowledge and understanding of the broader mission

Project Management – knowledge of project management; can utilize project management framework to ensure success

Repairing - repair machines or systems using the needed tools..

Tactical systems - extensive knowledge of a wide variety of tactical systems

Telecommunications — extensive knowledge on a variety of telecommunications platforms and IT systems.

Time Management - managing one's own time and the time of others.

Travel readiness – maintain eligibility to travel wherever the needs of the mission dictate.

Troubleshooting – can test, identify, and resolve the most difficult equipment and system problems

Utility systems - extensive knowledge of station and base electrical, mechanical, and utility systems; can install, operate and maintain basic and portable utility systems

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Markup language – HTML

Spreadsheet software — Microsoft Excel

Word Processor – MS Word

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Tools

Electronic measuring probes — Current probes; Voltage probes

Multimeters — Signal measuring equipment

Optical Time Domain Reflectometer - OTDR

Packet analyzer such as SNIFFER

Soldering irons or guns — Soldering equipment

Soldering or desoldering or combined stations — Soldering stations

Spectrum analyzer

Standard tool kits (e.g. JTK-17)

Voltage or current meters — Digital voltmeters DVM; Voltage testers

Customer and Personal Service — knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Equipment Selection - Determining the kind of tools and equipment needed to do a job..

Installation — install equipment, machines, wiring, or programs to meet specifications; plan, direct, and perform highly specialized technical projects

Installations - demonstrated high-level proficiency in leading and performing installations, modifications, and upgrades of highly specialized equipment and systems.

Integrity

Liaison - extensive knowledge of Liaison Requirements

Management – can direct; provide feedback; and, manage workflow

Manual Dexterity

Mathematics — general knowledge of mathematical principles.

Mechanical — general knowledge of machines and tools

Mission Awareness - organizational knowledge and understanding of the broader mission

Project Management – knowledge of project management; can utilize project management framework to ensure success

Repairing - repair machines or systems using the needed tools..

Tactical systems - extensive knowledge of a wide variety of tactical systems

Telecommunications — extensive knowledge on a variety of telecommunications platforms and IT systems.

Time Management - managing one's own time and the time of others.

Travel readiness – maintain eligibility to travel wherever the needs of the mission dictate.

Troubleshooting – can test, identify, and resolve the most difficult equipment and system problems

Utility systems - extensive knowledge of station and base electrical, mechanical, and utility systems; can install, operate and maintain basic and portable utility systems

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Markup language – HTML

Spreadsheet software — Microsoft Excel

Word Processor – MS Word

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Tools

Electronic measuring probes — Current probes; Voltage probes

Multimeters — Signal measuring equipment

Optical Time Domain Reflectometer - OTDR

Packet analyzer such as SNIFFER

Soldering irons or guns — Soldering equipment

Soldering or desoldering or combined stations — Soldering stations

Spectrum analyzer

Standard tool kits (e.g. JTK-17)

Voltage or current meters — Digital voltmeters DVM; Voltage testers

Work Environment

The work environment varies from an office environment to working in an environment that may include exposure to drafts, noise, dust, grease, dirt, and standing water as well as temperature extremes and inclement weather. Employees may experience extended periods of standing, walking, climbing, bending, crouching, and lifting light to very heavy objects and equipment. Use of ladders or scaffolding may be

required with the use of required safety equipment. Employees may be exposed to potential health hazards.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Test Engineer - Developmental

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Apply electronic theory and related knowledge, usually under the direction of engineering staff to design, build, repair, calibrate, and modify electrical components, circuitry, controls, machinery for subsequent evaluation and use by engineering staff in making engineering design decisions. Develop and execute software test plans in order to identify software problems and their causes.

Short Summary:
Apply electronic theory and related knowledge, usually under the direction of engineering staff to design, build, repair, calibrate, and modify electrical components, circuitry, controls, machinery for subsequent evaluation and use by engineering staff in making engineering design decisions. Develop and execute software test plans in order to identify software problems and their causes.

Duties, Tasks, and Responsibilities

Conduct software compatibility tests with programs, hardware, operating systems, or network environments.

Coordinate historical analyses of test results.

Coordinate with team members to ensure problem solution, appropriate risk reduction, and user satisfaction.

Create or maintain databases of known test defects.

Design or develop automated testing tools.

Design test plans, scenarios, scripts, or procedures.

Design, define and document unit and application test plans.

Develop or specify standards, methods, or procedures to determine product quality or release readiness.

Develop testing programs that address areas such as database impacts, software scenarios, regression testing, negative testing, error or bug retests, or usability.

Direct and/or participate in all phases of risk management assessments and software/hardware development with emphasis on analysis of user requirements, test design and test tools selection.

Document software defects, using bug tracking systems, and report defects to software developers.

Document test procedures to ensure replicability and compliance with standards.

Estimate software-testing costs and schedule.

Evaluate or recommend software for testing or bug tracking.

Install and configure recreations of software production environments to allow testing of software performance.

Install, maintain, or use software testing programs.

Investigate customer problems referred by technical support.

Make recommendations, if needed, on test and evaluation strategies for major systems installations.

Monitor bug resolution efforts and track successes.

Monitor program performance to ensure efficient and problem-free operations.

Perform analysis of documented user requirements and directs or assists in the design of test plans in support of user requirements for software or IT systems.

Plan test schedules or strategies in accordance with project scope or delivery dates.

Provide technical support during software installation or configuration.

Review user application system requirements documentation.

Transform test plans into test scripts and execute those scripts.

Visit beta testing sites to evaluate software performance.

Knowledge, Skills, and Abilities

Arm-Hand Steadiness – the ability to keep your hand and arm steady while moving you arm or while holding your arm and hand in one position.

Complex Problem Solving – Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics – Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical thinking – using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approached to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Design – Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and technology – Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language – knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Equipment Maintenance – Performing routine maintenance on equipment and determining when and what kind of maintenance is needed.

Finger Dexterity – the ability to make precisely coordinated movements of the fingers of one or both hands to grasp, manipulate, or assemble very small objects.

Information Ordering – the ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g. patterns of numbers, letters, word, pictures, and mathematical operations).

Mathematics – Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Mechanical – Knowledge of machine and tools, including their designs, uses, repair, and maintenance.

Near Vision – The ability to see details at close range (within a few feet of the observer).

Oral Comprehension – the ability to listen and understand information and ideas presented through spoken words and sentences.

Problem Sensitivity – the ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension – understanding written sentences and paragraphs in work related documents

Speaking – talking to others to convey information effectively.

Speech Clarity – the ability to speak clearly so others can understand you.

Speech Recognition – The ability to identify and understand the speech of another person.

Systems Analysis – Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Telecommunications – Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting – determining causes of operating errors and deciding what to do about it.

Writing – communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension – the ability to read and understand information and ideas presented in writing.

Written Expression – the ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.

• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Analytical or scientific software – Mentor Graphics ModelSim:Root cause analysis software; The mathworks MATLAB

Computer aided design CAD software – cadence software; MicroSim PSoice; Prentice Hall Electronic Workbench MultiSim

Data base user interface and query software – database software; Microsoft Access

Development Environment Software – C; Microsoft Visual Basic; National Instruments LabVIEW; Verilog

Spreadsheet Software – Microsoft Excel

Tools

Electronic Measuring Probes – Current Probes; Voltage Probes

Multimeters - Signal measuring equipment

Engineering and technology – Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language – knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Equipment Maintenance – Performing routine maintenance on equipment and determining when and what kind of maintenance is needed.

Finger Dexterity – the ability to make precisely coordinated movements of the fingers of one or both hands to grasp, manipulate, or assemble very small objects.

Information Ordering – the ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g. patterns of numbers, letters, word, pictures, and mathematical operations).

Mathematics – Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Mechanical – Knowledge of machine and tools, including their designs, uses, repair, and maintenance.

Near Vision – The ability to see details at close range (within a few feet of the observer).

Oral Comprehension – the ability to listen and understand information and ideas presented through spoken words and sentences.

Problem Sensitivity – the ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension – understanding written sentences and paragraphs in work related documents

Speaking – talking to others to convey information effectively.

Speech Clarity – the ability to speak clearly so others can understand you.

Speech Recognition – The ability to identify and understand the speech of another person.

Systems Analysis – Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Telecommunications – Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting – determining causes of operating errors and deciding what to do about it.

Writing – communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension – the ability to read and understand information and ideas presented in writing.

Written Expression – the ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Analytical or scientific software – Mentor Graphics ModelSim:Root cause analysis software; The mathworks MATLAB

Computer aided design CAD software – cadence software; MicroSim PSoice; Prentice Hall Electronic Workbench MultiSim

Data base user interface and query software – database software; Microsoft Access

Development Environment Software – C; Microsoft Visual Basic; National Instruments LabVIEW; Verilog

Spreadsheet Software – Microsoft Excel

Tools

Electronic Measuring Probes – Current Probes; Voltage Probes

Multimeters - Signal measuring equipment

Soldering irons or guns – Soldering equipment

Soldering or desoldering or combined stations – Soldering stations

Voltage or current meteres – Digital voltmeters DVM; Voltage testers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Test Engineer - Senior

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Apply electronic theory and related knowledge, usually under the direction of engineering staff to design, build, repair, calibrate, and modify electrical components, circuitry, controls, machinery for subsequent evaluation and use by engineering staff in making engineering design decisions. Develop and execute software test plans in order to identify software problems and their causes.

Short Summary:

Apply electronic theory and related knowledge, usually under the direction of engineering staff to design, build, repair, calibrate, and modify electrical components, circuitry, controls, machinery for subsequent evaluation and use by engineering staff in making engineering design decisions. Develop and execute software test plans in order to identify software problems and their causes.

Duties, Tasks, and Responsibilities

Conduct software compatibility tests with programs, hardware, operating systems, or network environments.

Coordinate historical analyses of test results.

Coordinate with team members to ensure problem solution, appropriate risk reduction, and user satisfaction.

Create or maintain databases of known test defects.

Design or develop automated testing tools.

Design test plans, scenarios, scripts, or procedures.

Design, define and document unit and application test plans.

Develop or specify standards, methods, or procedures to determine product quality or release readiness.

Develop testing programs that address areas such as database impacts, software scenarios, regression testing, negative testing, error or bug retests, or usability.

Direct and/or participate in all phases of risk management assessments and software/hardware development with emphasis on analysis of user requirements, test design and test tools selection.

Document software defects, using bug tracking systems, and report defects to software developers.

Document test procedures to ensure replicability and compliance with standards.

Estimate software-testing costs and schedule.

Evaluate or recommend software for testing or bug tracking.

Install and configure recreations of software production environments to allow testing of software performance.

Install, maintain, or use software testing programs.

Investigate customer problems referred by technical support.

Make recommendations, if needed, on test and evaluation strategies for major systems installations.

Monitor bug resolution efforts and track successes.

Monitor program performance to ensure efficient and problem-free operations.

Perform analysis of documented user requirements and directs or assists in the design of test plans in support of user requirements for software or IT systems.

Plan test schedules or strategies in accordance with project scope or delivery dates.

Provide technical support during software installation or configuration.

Review user application system requirements documentation.

Transform test plans into test scripts and execute those scripts.

Visit beta testing sites to evaluate software performance.

Knowledge, Skills, and Abilities

Arm-Hand Steadiness – the ability to keep your hand and arm steady while moving you arm or while holding your arm and hand in one position.

Complex Problem Solving – Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics – Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical thinking – using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approached to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Design – Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and technology – Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language – knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Equipment Maintenance – Performing routine maintenance on equipment and determining when and what kind of maintenance is needed.

Finger Dexterity – the ability to make precisely coordinated movements of the fingers of one or both hands to grasp, manipulate, or assemble very small objects.

Information Ordering – the ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g. patterns of numbers, letters, word, pictures, and mathematical operations).

Mathematics – Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Mechanical – Knowledge of machine and tools, including their designs, uses, repair, and maintenance.

Near Vision – The ability to see details at close range (within a few feet of the observer).

Oral Comprehension – the ability to listen and understand information and ideas presented through spoken words and sentences.

Problem Sensitivity – the ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension – understanding written sentences and paragraphs in work related documents

Speaking – talking to others to convey information effectively.

Speech Clarity – the ability to speak clearly so others can understand you.

Speech Recognition – The ability to identify and understand the speech of another person.

Systems Analysis – Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Telecommunications – Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting – determining causes of operating errors and deciding what to do about it.

Writing – communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension – the ability to read and understand information and ideas presented in writing.

Written Expression – the ability to communicate information and ideas in writing so others will understand.

Minimum Education

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Analytical or scientific software – Mentor Graphics ModelSim:Root cause analysis software; The mathworks MATLAB

Computer aided design CAD software – cadence software; MicroSim PSoice; Prentice Hall Electronic Workbench MultiSim

Provides technical direction to programmers as required to ensure program deadlines are met.

Duties, Tasks, and Responsibilities

Advise customer about, or perform, maintenance of software system.

Analyze information to determine, recommend, and plan computer specifications and layouts, and peripheral equipment modifications.

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Confer with data processing and project managers to obtain information on limitations and capabilities for data processing projects.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with customers about software system design and maintenance.

Consult with customers or other departments on project status, proposals and technical issues such as software system design and maintenance.

Consult with engineering staff to evaluate interface between hardware and software, develop specifications and performance requirements and resolve customer problems.

Coordinate installation of software system.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop and direct software system testing and validation procedures.

Estimate software development costs and schedule.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Monitor functioning of equipment to ensure system operates in conformance with specifications.

Obtain and evaluate information on factors such as reporting formats required, costs, and security needs to determine hardware configuration.

Prepare reports and correspondence concerning project specifications, activities and status.

Recommend purchase of equipment to control dust, temperature, and humidity in area of system installation.

Review existing programs and assist in making refinements, reducing operating time, and improve current techniques.

Specify power supply requirements and configuration.

Store, retrieve, and manipulate data for analysis of system capabilities and requirements.

Supervise the work of programmers, technologists and technicians and other engineering and scientific personnel.

Train users to use new or modified equipment

Utilize microcontrollers to develop control signals, implement control algorithms and measure process variables such as temperatures, pressures and positions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Database management system software — Computer Associates integrated data management system CA-IDMS; Database management software; Microsoft SQL Server; Oracle DBMS

Development environment software — C; Embedded systems development software; IBM Rational Rose XDE Developer; Microsoft Visual Basic

In depth development experience with Java, Java component development, JavaScript, PERL, XML, XSL and/or HTTP/HTML, IIS, iPlanet, Apache, WebLogic, Web service development in J2EE, SQL, experience with spiral or evolutionary development, CSS, JSP, web services. In-depth knowledge of one or more specific COTS products in use, such as WebLogic, PlumTree, WebMethods, RetrievalWare, TeamWorks, COGNOS.

Object or component oriented development software — C++; Self; Simulation language SIMULA; Sun Microsystems Java

Program testing software — Defect tracking software; Mercury Interactive LoadRunner; Source code editor software; Usability testing software

Web platform development software — Apache Struts; Hypertext markup language HTML; JavaScript; Ruby on Rails

Tools

Desktop computers

High end computer servers — Application servers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation

of contractor performance will be completed by the government at the contract level.

Tools Developer - Expert

Confer with data processing and project managers to obtain information on limitations and capabilities for data processing projects.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with customers about software system design and maintenance.

Consult with customers or other departments on project status, proposals and technical issues such as software system design and maintenance.

Consult with engineering staff to evaluate interface between hardware and software, develop specifications and performance requirements and resolve customer problems.

Coordinate installation of software system.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop and direct software system testing and validation procedures.

Estimate software development costs and schedule.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Monitor functioning of equipment to ensure system operates in conformance with specifications.

Obtain and evaluate information on factors such as reporting formats required, costs, and security needs to determine hardware configuration.

Prepare reports and correspondence concerning project specifications, activities and status.

Recommend purchase of equipment to control dust, temperature, and humidity in area of system installation.

Review existing programs and assist in making refinements, reducing operating time, and improve current techniques.

Specify power supply requirements and configuration.

Store, retrieve, and manipulate data for analysis of system capabilities and requirements.

Supervise the work of programmers, technologists and technicians and other engineering and scientific personnel.

Train users to use new or modified equipment

Utilize microcontrollers to develop control signals, implement control algorithms and measure process variables such as temperatures, pressures and positions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Database management system software — Computer Associates integrated data management system CA-IDMS; Database management software; Microsoft SQL Server; Oracle DBMS

Development environment software — C; Embedded systems development software; IBM Rational Rose XDE Developer; Microsoft Visual Basic

In depth development experience with Java, Java component development, JavaScript, PERL, XML, XSL and/or HTTP/HTML, IIS, iPlanet, Apache, WebLogic, Web service development in J2EE, SQL, experience with spiral or evolutionary development, CSS, JSP, web services. In-depth knowledge of one or more specific COTS products in use, such as WebLogic, PlumTree, WebMethods, RetrievalWare, TeamWorks, COGNOS.

Object or component oriented development software — C++; Self; Simulation language SIMULA; Sun Microsystems Java

Program testing software — Defect tracking software; Mercury Interactive LoadRunner; Source code editor software; Usability testing software

Web platform development software — Apache Struts; Hypertext markup language HTML; JavaScript; Ruby on Rails

Tools

Desktop computers

High end computer servers — Application servers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Tools Developer - Full Performance

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Identify applications that can support the exploitation of databases. Assess what will be required to integrate a particular tool into the customer environment. Integrate tools into the customer environment. Uses the BPM application to create live implementations of processes. Provides group facilitation, interviewing, training, and provides additional forms of knowledge transfer. Key coordinator between multiple project teams to ensure enterprise-wide integration of reengineering efforts. Tests, debugs, and refines the computer software to produce the required product. Prepares required documentation, including both program-level and user-level documentation. Enhances software to reduce operating time or improve efficiency. Provides technical direction to programmers as required to ensure program deadlines are met.

Short Summary:
Identify applications that can support the exploitation of databases. Assess what will be required to integrate a particular tool into the customer environment. Integrate tools into the customer environment. Uses the BPM application to create live implementations of processes. Provides group facilitation, interviewing, training, and provides additional forms of knowledge transfer. Key coordinator between multiple project teams to ensure enterprise-wide integration of reengineering efforts. Tests, debugs, and refines the computer software to produce the required product. Prepares required documentation, including both program-level and user-level documentation. Enhances software to reduce operating time or improve efficiency. Provides technical direction to programmers as required to ensure program deadlines are met.

Duties, Tasks, and Responsibilities

Advise customer about, or perform, maintenance of software system.

Analyze information to determine, recommend, and plan computer specifications and layouts, and peripheral equipment modifications.

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Confer with data processing and project managers to obtain information on limitations and capabilities for data processing projects.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with customers about software system design and maintenance.

Consult with customers or other departments on project status, proposals and technical issues such as software system design and maintenance.

Consult with engineering staff to evaluate interface between hardware and software, develop specifications and performance requirements and resolve customer problems.

Coordinate installation of software system.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop and direct software system testing and validation procedures.

Estimate software development costs and schedule.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Monitor functioning of equipment to ensure system operates in conformance with specifications.

Obtain and evaluate information on factors such as reporting formats required, costs, and security needs to determine hardware configuration.

Prepare reports and correspondence concerning project specifications, activities and status.

Recommend purchase of equipment to control dust, temperature, and humidity in area of system installation.

Review existing programs and assist in making refinements, reducing operating time, and improve current techniques.

Specify power supply requirements and configuration.

Store, retrieve, and manipulate data for analysis of system capabilities and requirements.

Supervise the work of programmers, technologists and technicians and other engineering and scientific personnel.

Train users to use new or modified equipment

Utilize microcontrollers to develop control signals, implement control algorithms and measure process variables such as temperatures, pressures and positions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Duties, Tasks, and Responsibilities

Advise customer about, or perform, maintenance of software system.

Analyze information to determine, recommend, and plan computer specifications and layouts, and peripheral equipment modifications.

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Confer with data processing and project managers to obtain information on limitations and capabilities for data processing projects.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with customers about software system design and maintenance.

Consult with customers or other departments on project status, proposals and technical issues such as software system design and maintenance.

Consult with engineering staff to evaluate interface between hardware and software, develop specifications and performance requirements and resolve customer problems.

Coordinate installation of software system.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop and direct software system testing and validation procedures.

Estimate software development costs and schedule.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Monitor functioning of equipment to ensure system operates in conformance with specifications.

Obtain and evaluate information on factors such as reporting formats required, costs, and security needs to determine hardware configuration.

Prepare reports and correspondence concerning project specifications, activities and status.

Recommend purchase of equipment to control dust, temperature, and humidity in area of system installation.

Review existing programs and assist in making refinements, reducing operating time, and improve current techniques.

Specify power supply requirements and configuration.

Store, retrieve, and manipulate data for analysis of system capabilities and requirements.

Supervise the work of programmers, technologists and technicians and other engineering and scientific personnel.

Train users to use new or modified equipment

Utilize microcontrollers to develop control signals, implement control algorithms and measure process variables such as temperatures, pressures and positions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Database management system software — Computer Associates integrated data management system CA-IDMS; Database management software; Microsoft SQL Server; Oracle DBMS

Development environment software — C; Embedded systems development software; IBM Rational Rose XDE Developer; Microsoft Visual Basic

In depth development experience with Java, Java component development, JavaScript, PERL, XML, XSL and/or HTTP/HTML, IIS, iPlanet, Apache, WebLogic, Web service development in J2EE, SQL, experience with spiral or evolutionary development, CSS, JSP, web services. In-depth knowledge of one or more specific COTS products in use, such as WebLogic, PlumTree, WebMethods, RetrievalWare, TeamWorks, COGNOS.

Object or component oriented development software — C++; Self; Simulation language SIMULA; Sun Microsystems Java

Program testing software — Defect tracking software; Mercury Interactive LoadRunner; Source code editor software; Usability testing software

Web platform development software — Apache Struts; Hypertext markup language HTML; JavaScript; Ruby on Rails

Tools

Desktop computers

High end computer servers — Application servers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive

periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Tools Developer - Subject Matter Expert

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Identify applications that can support the exploitation of databases. Assess what will be required to integrate a particular tool into the customer environment. Integrate tools into the customer environment. Uses the BPM application to create live implementations of processes. Provides group facilitation, interviewing, training, and provides additional forms of knowledge transfer. Key coordinator between multiple project teams to ensure enterprise-wide integration of reengineering efforts. Tests, debugs, and refines the computer software to produce the required product. Prepares required documentation, including both program-level and user-level documentation. Enhances software to reduce operating time or improve efficiency. Provides technical direction to programmers as required to ensure program deadlines are met.

Short Summary:
Identify applications that can support the exploitation of databases. Assess what will be required to integrate a particular tool into the customer environment. Integrate tools into the customer environment. Uses the BPM application to create live implementations of processes. Provides group facilitation, interviewing, training, and provides additional forms of knowledge transfer. Key coordinator between multiple project teams to ensure enterprise-wide integration of reengineering efforts. Tests, debugs, and refines the computer software to produce the required product. Prepares required documentation, including both program-level and user-level documentation. Enhances software to reduce operating time or improve efficiency. Provides technical direction to programmers as required to ensure program deadlines are met.

Duties, Tasks, and Responsibilities

Advise customer about, or perform, maintenance of software system.

Analyze information to determine, recommend, and plan computer specifications and layouts, and peripheral equipment modifications.

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Confer with data processing and project managers to obtain information on limitations and capabilities for data processing projects.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with customers about software system design and maintenance.

Consult with customers or other departments on project status, proposals and technical issues such as software system design and maintenance.

Consult with engineering staff to evaluate interface between hardware and software, develop specifications and performance requirements and resolve customer problems.

Coordinate installation of software system.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop and direct software system testing and validation procedures.

Estimate software development costs and schedule.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Monitor functioning of equipment to ensure system operates in conformance with specifications.

Obtain and evaluate information on factors such as reporting formats required, costs, and security needs to determine hardware configuration.

Prepare reports and correspondence concerning project specifications, activities and status.

Recommend purchase of equipment to control dust, temperature, and humidity in area of system installation.

Review existing programs and assist in making refinements, reducing operating time, and improve current techniques.

Specify power supply requirements and configuration.

Store, retrieve, and manipulate data for analysis of system capabilities and requirements.

Supervise the work of programmers, technologists and technicians and other engineering and scientific personnel.

Train users to use new or modified equipment

Utilize microcontrollers to develop control signals, implement control algorithms and measure process variables such as temperatures, pressures and positions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

UNIX Administrator - Developmental

Skill Community: Enterprise IT

Labor Group: Administration

Job Classification: Contractor

Status: Active

Date Effective: 11/1/2012

Standard Occupational Code:
 [15-1141] Database Administrators

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. The Unix administrator is responsible for Unix (e.g. Sun F15000 and smaller) or Linux environments. This includes responsibility for the operating system software and its successful integration with the hardware and applications software of the major computing systems across the organization.

Short Summary:

The Unix administrator is responsible for Unix (e.g. Sun F15000 and smaller) or Linux environments. This includes responsibility for the operating system software and its successful integration with the hardware and applications software of the major computing systems across the organization.

Duties, Tasks, and Responsibilities

Designs interfaces to external systems

Develops test plans and procedures

Establishes development, testing, staging, and operating environments

Maintains and consults for relevant operating systems on organizational computer systems, all third-party software components, and subsystems

Maintains and updates documentation on the operating systems configuration

Manages software life cycles

Plans, tests, installs, and integrates new and upgraded versions of the relevant operating systems on organizational computer systems, all third-party software components, and subsystems

Provides technical support to applications and utility developers on requirements for integration into the operating environment

Researches and resolves systems software problems efficiently and accurately while adhering to internal software management standards and procedures

Tests and integrates software and hardware

Troubleshoots problems that may involve applications and the network

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Documentation —Ability to draft requirements documents, correspondence and procedures in accordance with policies

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Knowledge of Communications and Information Security policies and practices

Knowledge of the CIO's policies and procedures relating to the design, upgrading, and operating and maintaining networks.

Knowledge of theory and practice underlying satellite and LAN/WAN network operations.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Network Analysis — Ability to utilize complex network analysis tools to resolve complex network performance problems.

Oral Expression — Ability to communicate information and ideas in speaking so others will understand.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Presentation — Ability to write technical proposals for presentation to approval boards.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Procedures and Processes — Ability to provide explanations of complex technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Programming — Writing computer programs for various purposes

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Systems Environment — Demonstrated ability to effectively function in a multi-system and/or multi-application environment

Systems — Knowledge of multiple specialties such as operating systems, email or database platforms, storage technologies, or hardware support, including knowledge of operating systems (e.g., NT, Windows 2000, Unix, XP).

Technologies — Knowledge of existing server technologies including principles and methods used in obtaining maximum utilization of server technologies.

Technology — Ability to assess the technical characteristics of new operating capabilities proposed for inclusion in the network to determine potential impact on network performance.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Knowledge of theory and practice underlying satellite and LAN/WAN network operations.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Network Analysis — Ability to utilize complex network analysis tools to resolve complex network performance problems.

Oral Expression — Ability to communicate information and ideas in speaking so others will understand.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Presentation — Ability to write technical proposals for presentation to approval boards.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Procedures and Processes — Ability to provide explanations of complex technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Programming — Writing computer programs for various purposes

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Systems Environment — Demonstrated ability to effectively function in a multi-system and/or multi-application environment

Systems — Knowledge of multiple specialties such as operating systems, email or database platforms, storage technologies, or hardware support, including knowledge of operating systems (e.g., NT, Windows 2000, Unix, XP).

Technologies — Knowledge of existing server technologies including principles and methods used in obtaining maximum utilization of server technologies.

Technology — Ability to assess the technical characteristics of new operating capabilities proposed for inclusion in the network to determine potential impact on network performance.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

UNIX Administrator - Manager

Skill Community: Enterprise IT

Labor Group: Administration

Job Classification: Contractor

Status: Active

Date Effective: 5/31/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab.

The Unix administrator is responsible for Unix (e.g. Sun F15000 and smaller) or Linux environments. This includes responsibility for the operating system software and its successful integration with the hardware and applications software of the major computing systems across the organization.

Short Summary:
The Unix administrator is responsible for Unix (e.g. Sun F15000 and smaller) or Linux environments. This includes responsibility for the operating system software and its successful integration with the hardware and applications software of the major computing systems across the organization.

Duties, Tasks, and Responsibilities

Designs interfaces to external systems

Develops test plans and procedures

Establishes development, testing, staging, and operating environments

Maintains and consults for relevant operating systems on organizational computer systems, all third-party software components, and subsystems

Maintains and updates documentation on the operating systems configuration

Manages software life cycles

Plans, tests, installs, and integrates new and upgraded versions of the relevant operating systems on organizational computer systems, all third-party software components, and subsystems

Provides technical support to applications and utility developers on requirements for integration into the operating environment

Researches and resolves systems software problems efficiently and accurately while adhering to internal software management standards and procedures

Tests and integrates software and hardware

Troubleshoots problems that may involve applications and the network

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Documentation —Ability to draft requirements documents, correspondence and procedures in accordance with policies

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Knowledge of Communications and Information Security policies and practices

Knowledge of the CIO's policies and procedures relating to the design, upgrading, and operating and maintaining networks.

Knowledge of theory and practice underlying satellite and LAN/WAN network operations.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Network Analysis — Ability to utilize complex network analysis tools to resolve complex network performance problems.

Oral Expression — Ability to communicate information and ideas in speaking so others will understand.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Web Administrator - Developmental

Skill Community: Enterprise IT

Labor Group: Administration

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Manage web environment design, deployment, development and maintenance activities.
Administer internet/intranet infrastructure, including components such as web, file transfer protocol (FTP), news and mail servers. Collaborate with web developers to create and operate internal and external web sites, or to manage projects, such as e-marketing campaigns. Collaborate with development teams to discuss, analyze, or resolve usability issues. Install or configure web server software or hardware to ensure that directory structure is well defined, logical, secure, and that files are named properly.

Short Summary:
Manage web environment design, deployment, development and maintenance activities.
Administer internet/intranet infrastructure, including components such as web, file transfer protocol (FTP), news and mail servers. Collaborate with web developers to create and operate internal and external web sites, or to manage projects, such as e-marketing campaigns. Collaborate with development teams to discuss, analyze, or resolve usability issues. Install or configure web server software or hardware to ensure that directory structure is well defined, logical, secure, and that files are named properly.

Duties, Tasks, and Responsibilities

Administer internet/intranet infrastructure, including components such as web, file transfer protocol (FTP), news and mail servers.

Back up or modify applications and related data to provide for disaster recovery.

Check and analyze operating system or application log files regularly to verify proper system performance.

Collaborate with development teams to discuss, analyze, or resolve usability issues.

Collaborate with web developers to create and operate internal and external web sites, or to manage projects, such as e-marketing campaigns.

Correct testing-identified problems, or recommend actions for their resolution

Determine sources of web page or server problems, and take action to correct such problems.

Develop and implement marketing plans for home pages, including print advertising or advertisement rotation

Develop or document style guidelines for web site content.

Develop or implement procedures for ongoing web site revision.

Develop testing routines and procedures

Develop web site performance metrics

Document application and web site changes or change procedures.

Document installation or configuration procedures to allow maintenance and repetition.

Evaluate or recommend server hardware or software.

Evaluate testing routines or procedures for adequacy, sufficiency, and effectiveness

Gather, analyze, or document user feedback to locate or resolve sources of problems.

Identify or address interoperability requirements.

Identify or document backup or recovery plans

Identify, standardize, and communicate levels of access and security.

Implement updates, upgrades, and patches in a timely manner to limit loss of service.

Implement web site security measures, such as firewalls or message encryption.

Inform web site users of problems, problem resolutions or application changes and updates.

Install or configure web server software or hardware to ensure that directory structure is well defined, logical, secure, and that files are named properly.

Monitor systems for intrusions or denial of service attacks, and report security breaches to appropriate personnel.

Monitor web developments through continuing education, reading, or participation in professional conferences, workshops, or groups.

Perform user testing or usage analysis to determine web sites' effectiveness or usability.

Provide training or technical assistance in web site implementation or use.

Recommend web site improvements, and develop budgets to support recommendations

Review or update web page content or links in a timely manner, using appropriate tools.

Set up or maintain monitoring tools on web servers or web sites.

Test backup or recovery plans regularly and resolve any problems

Test issues such as system integration, performance, and system security on a regular schedule or after any major program modifications

Test new software packages for use in web operations or other applications

Track, compile, and analyze web site usage data

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Communicating effectively as appropriate for the needs of the audience.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Operations Analysis — Analyzing needs and product requirements to create a design.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

The ability to communicate information and ideas so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Application server software — IBM WebSphere; JBoss Application Server; Microsoft Virtual Server; VMWare ESX Server

Development environment software — Borland Delphi software; Extensible stylesheet language XSL; Microsoft Visual Studio; Tool command language Tcl

Graphics or photo imaging software — Adobe Systems Adobe FreeHand; Adobe Systems Adobe Illustrator; Adobe Systems Adobe Photoshop software; Corel CorelDraw Graphics Suite

Web page creation and editing software — Adobe Systems Adobe Dreamweaver; Adobe Systems Adobe Flash Player; Adobe Systems Adobe Macromedia HomeSite; Microsoft FrontPage

Web platform development software — Adobe Systems Adobe Shockwave Player; Apache Tomcat; Enterprise JavaBeans; JavaScript

Tools

Computer servers — Web servers

Desktop computers

Notebook computers — Laptop computers

Personal computers

Scanners — Computer data input scanners

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Web Administrator - Expert

Skill Community: Enterprise IT

Labor Group: Administration

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Manage web environment design, deployment, development and maintenance activities.
Administer internet/intranet infrastructure, including components such as web, file transfer protocol (FTP), news and mail servers. Collaborate with web developers to create and operate internal and external web sites, or to manage projects, such as e-marketing campaigns. Collaborate with development teams to discuss, analyze, or resolve usability issues. Install or configure web server software or hardware to ensure that directory structure is well defined, logical, secure, and that files are named properly.

Short Summary:

Manage web environment design, deployment, development and maintenance activities.
Administer internet/intranet infrastructure, including components such as web, file transfer protocol (FTP), news and mail servers. Collaborate with web developers to create and operate internal and external web sites, or to manage projects, such as e-marketing campaigns. Collaborate with development teams to discuss, analyze, or resolve usability issues. Install or configure web server software or hardware to ensure that directory structure is well defined, logical, secure, and that files are named properly.

Duties, Tasks, and Responsibilities

Administer internet/intranet infrastructure, including components such as web, file transfer protocol (FTP), news and mail servers.

Back up or modify applications and related data to provide for disaster recovery.

Check and analyze operating system or application log files regularly to verify proper system performance.

Collaborate with development teams to discuss, analyze, or resolve usability issues.

Collaborate with web developers to create and operate internal and external web sites, or to manage projects, such as e-marketing campaigns.

Correct testing-identified problems, or recommend actions for their resolution

Determine sources of web page or server problems, and take action to correct such problems.

Develop and implement marketing plans for home pages, including print advertising or advertisement rotation

Develop or document style guidelines for web site content.

Develop or implement procedures for ongoing web site revision.

Develop testing routines and procedures

Develop web site performance metrics

Document application and web site changes or change procedures.

Document installation or configuration procedures to allow maintenance and repetition.

Evaluate or recommend server hardware or software.

Evaluate testing routines or procedures for adequacy, sufficiency, and effectiveness

Gather, analyze, or document user feedback to locate or resolve sources of problems.

Identify or address interoperability requirements.

Identify or document backup or recovery plans

Identify, standardize, and communicate levels of access and security.

Implement updates, upgrades, and patches in a timely manner to limit loss of service.

Implement web site security measures, such as firewalls or message encryption.

Inform web site users of problems, problem resolutions or application changes and updates.

Install or configure web server software or hardware to ensure that directory structure is well defined, logical, secure, and that files are named properly.

Monitor systems for intrusions or denial of service attacks, and report security breaches to appropriate personnel.

Monitor web developments through continuing education, reading, or participation in professional conferences, workshops, or groups.

Perform user testing or usage analysis to determine web sites' effectiveness or usability.

Provide training or technical assistance in web site implementation or use.

Recommend web site improvements, and develop budgets to support recommendations

Review or update web page content or links in a timely manner, using appropriate tools.

Set up or maintain monitoring tools on web servers or web sites.

Test backup or recovery plans regularly and resolve any problems

Test issues such as system integration, performance, and system security on a regular schedule or after any major program modifications

Test new software packages for use in web operations or other applications

Track, compile, and analyze web site usage data

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Operations Analysis — Analyzing needs and product requirements to create a design.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

The ability to communicate information and ideas so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Application server software — IBM WebSphere; JBoss Application Server; Microsoft Virtual Server; VMWare ESX Server

Development environment software — Borland Delphi software; Extensible stylesheet language XSL; Microsoft Visual Studio; Tool command language Tcl

Graphics or photo imaging software — Adobe Systems Adobe FreeHand; Adobe Systems Adobe Illustrator; Adobe Systems Adobe Photoshop software; Corel CorelDraw Graphics Suite

Web page creation and editing software — Adobe Systems Adobe Dreamweaver; Adobe Systems Adobe Flash Player; Adobe Systems Adobe Macromedia HomeSite; Microsoft FrontPage

Web platform development software — Adobe Systems Adobe Shockwave Player; Apache Tomcat; Enterprise JavaBeans; JavaScript

Tools

Computer servers — Web servers

Desktop computers

Notebook computers — Laptop computers

Personal computers

Scanners — Computer data input scanners

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Web Administrator - Subject Matter Expert

Skill Community: Enterprise IT

Labor Group: Administration

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Manage web environment design, deployment, development and maintenance activities.
Administer internet/intranet infrastructure, including components such as web, file transfer protocol (FTP), news and mail servers. Collaborate with web developers to create and operate internal and external web sites, or to manage projects, such as e-marketing campaigns. Collaborate with development teams to discuss, analyze, or resolve usability issues. Install or configure web server software or hardware to ensure that directory structure is well defined, logical, secure, and that files are named properly.

Short Summary:

Manage web environment design, deployment, development and maintenance activities.
Administer internet/intranet infrastructure, including components such as web, file transfer protocol (FTP), news and mail servers. Collaborate with web developers to create and operate internal and external web sites, or to manage projects, such as e-marketing campaigns. Collaborate with development teams to discuss, analyze, or resolve usability issues. Install or configure web server software or hardware to ensure that directory structure is well defined, logical, secure, and that files are named properly.

Duties, Tasks, and Responsibilities

Administer internet/intranet infrastructure, including components such as web, file transfer protocol (FTP), news and mail servers.

Back up or modify applications and related data to provide for disaster recovery.

Check and analyze operating system or application log files regularly to verify proper system performance.

Collaborate with development teams to discuss, analyze, or resolve usability issues.

Collaborate with web developers to create and operate internal and external web sites, or to manage projects, such as e-marketing campaigns.

Correct testing-identified problems, or recommend actions for their resolution

Determine sources of web page or server problems, and take action to correct such problems.

Develop and implement marketing plans for home pages, including print advertising or advertisement rotation

Develop or document style guidelines for web site content.

Develop or implement procedures for ongoing web site revision.

Develop testing routines and procedures

Develop web site performance metrics

Document application and web site changes or change procedures.

Document installation or configuration procedures to allow maintenance and repetition.

Evaluate or recommend server hardware or software.

Evaluate testing routines or procedures for adequacy, sufficiency, and effectiveness

Gather, analyze, or document user feedback to locate or resolve sources of problems.

Identify or address interoperability requirements.

Identify or document backup or recovery plans

Identify, standardize, and communicate levels of access and security.

Implement updates, upgrades, and patches in a timely manner to limit loss of service.

Implement web site security measures, such as firewalls or message encryption.

Inform web site users of problems, problem resolutions or application changes and updates.

Install or configure web server software or hardware to ensure that directory structure is well defined, logical, secure, and that files are named properly.

Monitor systems for intrusions or denial of service attacks, and report security breaches to appropriate personnel.

Monitor web developments through continuing education, reading, or participation in professional conferences, workshops, or groups.

Perform user testing or usage analysis to determine web sites' effectiveness or usability.

Provide training or technical assistance in web site implementation or use.

Recommend web site improvements, and develop budgets to support recommendations

Review or update web page content or links in a timely manner, using appropriate tools.

Set up or maintain monitoring tools on web servers or web sites.

Test backup or recovery plans regularly and resolve any problems

Test issues such as system integration, performance, and system security on a regular schedule or after any major program modifications

Test new software packages for use in web operations or other applications

Track, compile, and analyze web site usage data

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Communicating effectively as appropriate for the needs of the audience.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Operations Analysis — Analyzing needs and product requirements to create a design.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

The ability to communicate information and ideas so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.

• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Set up or maintain monitoring tools on web servers or web sites

Test backup or recovery plans regularly and resolve any problems

Test issues such as system integration, performance, and system, security on a regular schedule or after any major program modifications

Test new software packages for use in web operations or other applications

Track, compile, and analyze web site usage data

Knowledge, Skills, and Abilities

Analyzing needs and product requirements to create a design.

Communicating effectively as appropriate for the needs of the audience

Determining causes of errors and deciding what to do

Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Knowledge of business management principles involved in strategic planning, resource allocation, human resource modeling, leadership techniques, production methods, and coordination of people and resources.

Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming

Knowledge of design techniques tools and principles involved in production of precision technical plans, blueprints, drawings and models.

Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Knowledge of principles and processes for providing customer and personal services.

Understanding the implications of new information for both current and future problem solving and decision making.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Application server software; Development environmental software; Graphics or photo imaging software; web page creation and editing software; web platform development software.

Tools

Computer Servers – Web Servers

Desktop Computers

Notebook Computers – Laptop Computers

Scanners – Computer data input scanners

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Web Content Administrator - Senior

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 6/5/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Manage web environment design, deployment, development and maintenance activities. Perform testing and quality assurance of web sites and web applications.

Short Summary:
Manage web environment design, deployment, development and maintenance activities. Perform testing and quality assurance of web sites and web applications.

Duties, Tasks, and Responsibilities

Administer internet/intranet infrastructure, including components such as web, file transfer protocol (FTP), news and mail servers

Back up or modify applications and related data to provide for disaster recovery

Check and analyze operating systems or application log files regularly to verify proper system performance

Collaborate with development teams to discuss, analyze, or resolve usability issues

Collaborate with web developers to create and operate internal and external web sites, or to manage projects, such as e-marketing campaigns

Correct testing-identified problems, or recommend actions for their resolution

Determine sources of web page or server problems, and take action to correct such problems

Develop and implement marketing plans for home pages, including print advertising or advertisement rotation

Develop or document style guidelines for web site content

Develop or implement procedures for ongoing web site revision

Develop testing routines and procedures

Develop web site performance metrics

Document application and web site change procedures

Document installation or configuration procedures to allow maintenance and repetition

Evaluate or recommend server hardware or software

Evaluate testing routines or procedures for adequacy, sufficiency, and effectiveness

Gather, analyze, or document user feedback to locate or resolve sources of problems

Identify or document backup or recovery plans

Identify, standardize, and communicate levels of access and security

Implement updates, upgrades, and patches in a timely manner to limit loss of service

Implement web security measures, such as firewalls or message encryption

Inform web site users of problems, problem resolution or application changes and updates

Install or configure web server software or hardware to ensure that directory structure is well defined, logical, secure, and that files are named properly

Monitor systems for intrusions or denial of service attacks, and report security breaches to appropriate personnel

Monitor web developments through continuing education, reading, or participation in professional conferences, workshops, or groups

Perform user testing or usage analyses to determine web sites' effectiveness or usability

Recommend web site improvements, and develop budgets to support recommendations

Review or update web page content or links in a timely manner, using appropriate tools

Set up or maintain monitoring tools on web servers or web sites

Test backup or recovery plans regularly and resolve any problems

Test issues such as system integration, performance, and system, security on a regular schedule or after any major program modifications

Test new software packages for use in web operations or other applications

Track, compile, and analyze web site usage data

Knowledge, Skills, and Abilities

Analyzing needs and product requirements to create a design.

Communicating effectively as appropriate for the needs of the audience

Determining causes of errors and deciding what to do

Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Knowledge of business management principles involved in strategic planning, resource allocation, human resource modeling, leadership techniques, production methods, and coordination of people and resources.

Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming

Knowledge of design techniques tools and principles involved in production of precision technical plans, blueprints, drawings and models.

Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Knowledge of principles and processes for providing customer and personal services.

Understanding the implications of new information for both current and future problem solving and decision making.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.

• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Application server software; Development environmental software; Graphics or photo imaging software; web page creation and editing software; web platform development software.

Tools

Computer Servers – Web Servers

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 10/6/2012

Standard Occupational Code:
 [15-1134] Web Developers

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Web developers are responsible for day-to-day site design and creation. Webmasters are responsible for the technical aspects of the web site, including performance issues such as speed of access, and for approving site content.

Short Summary:

Web developers are responsible for day-to-day site design and creation. Webmasters are responsible for the technical aspects of the web site, including performance issues such as speed of access, and for approving site content.

Duties, Tasks, and Responsibilities

Analyze user needs to determine technical requirements.

Back up files from web sites to local directories for instant recovery in case of problems.

Collaborate with management or users to develop e-commerce strategies and to integrate these strategies with web sites.

Communicate with network personnel or web site hosting agencies to address hardware or software issues affecting web sites.

Confer with management or development teams to prioritize needs, resolve conflicts, develop content criteria, or choose solutions.

Create searchable indices for web page content.

Create web models or prototypes that include physical, interface, logical, or data models.

Design and implement web site security measures such as firewalls or message encryption.

Design, build, or maintain web sites, using authoring or scripting languages, content creation tools, management tools, and digital media.

Develop and document style guidelines for web site content.

Develop databases that support web applications and web sites.

Develop or implement procedures for ongoing web site revision.

Develop or validate test routines and schedules to ensure that test cases mimic external interfaces and address all browser and device types.

Develop system interaction or sequence diagrams.

Develop web site maps, application models, image templates, or page templates that meet project goals, user needs, or industry standards.

Document technical factors such as server load, bandwidth, database performance, and browser and device types.

Document test plans, testing procedures, or test results.

Establish appropriate server directory trees.

Evaluate code to ensure that it is valid, is properly structured, meets industry standards and is compatible with browsers, devices, or operating systems.

Evaluate or recommend server hardware or software.

Identify or maintain links to and from other web sites and check links to ensure proper functioning.

Identify problems uncovered by testing or customer feedback, and correct problems or refer problems to appropriate personnel for correction.

Incorporate technical considerations into web site design plans, such as budgets, equipment, performance requirements, or legal issues including accessibility and privacy.

Install and configure hypertext transfer protocol (HTTP) servers and associated operating systems.

Maintain understanding of current web technologies or programming practices through continuing education, reading, or participation in professional conferences, workshops, or groups.

Monitor security system performance logs to identify problems and notify security specialists when problems occur.

Perform or direct web site updates.

Perform web site tests according to planned schedules, or after any web site or product revisions.

Provide clear, detailed descriptions of web site specifications such as product features, activities, software, communication protocols, programming languages, and operating systems software and hardware.

Recommend and implement performance improvements.

Register web sites with search engines to increase web site traffic.

Renew domain name registrations.

Research, document, rate, or select alternatives for web architecture or technologies.

Respond to user email inquiries, or set up automated systems to send responses.

Select programming languages, design tools, or applications.

Write supporting code for web applications or web sites.

Write, design, or edit web page content, or direct others producing content.

Knowledge, Skills, and Abilities

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Operations Analysis — Analyzing needs and product requirements to create a design.

Programming — Writing computer programs for various purposes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Troubleshooting — determining causes of operating errors and deciding what to do about it.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.

• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Application Architecture and related technologies: N-Tier/Services Oriented Architecture, Web Services, WebLogic (Application Server), Oracle (RDBMS), PlumTree (Portal); WebLogic Web Server (Web Server); Internet Explorer & Netscape (Browser), Apache Struts (Development Framework); JBuilder Enterprise Edition (IDE); Concurrent Versions System-CVS (Version Management), Embarcadero Describe and System Architect (Architecture Modeling).

Programming and related technologies: Java, C, C++, Perl, Visual Basic, Oracle, MS Office, Lotus Notes/Domino, Java-based development tools (JBuilder), Excalibur RetrievalWare, Internet/Website and Content Management Technologies (i.e., Macromedia Dreamweaver, Fireworks, Flash, Adobe Illustrator and Photoshop, HTML, XML), Web Protocols and Technologies (XML, SOAP, HTML, HTTP, TCP/IP, etc.), Data Architecture and Database System Design, Database management software; Distributed database management software Business Process Management (i.e., Lombardi Works), Software and Systems Engineering, Information Security Operating System/Platform to include: Unix (Solaris), Windows, Linux, Thin Client (i.e., Citrix); Program testing software - defect tracking software; fault testing software; IBM Rational ClearQuest; Mercury Interactive LoadRunner.

Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Web developers are responsible for day-to-day site design and creation. Webmasters are responsible for the technical aspects of the web site, including performance issues such as speed of access, and for approving site content.

Short Summary:
Web developers are responsible for day-to-day site design and creation. Webmasters are responsible for the technical aspects of the web site, including performance issues such as speed of access, and for approving site content.

Duties, Tasks, and Responsibilities

Analyze user needs to determine technical requirements.

Back up files from web sites to local directories for instant recovery in case of problems.

Collaborate with management or users to develop e-commerce strategies and to integrate these strategies with web sites.

Communicate with network personnel or web site hosting agencies to address hardware or software issues affecting web sites.

Confer with management or development teams to prioritize needs, resolve conflicts, develop content criteria, or choose solutions.

Create searchable indices for web page content.

Create web models or prototypes that include physical, interface, logical, or data models.

Design and implement web site security measures such as firewalls or message encryption.

Design, build, or maintain web sites, using authoring or scripting languages, content creation tools, management tools, and digital media.

Develop and document style guidelines for web site content.

Develop databases that support web applications and web sites.

Develop or implement procedures for ongoing web site revision.

Develop or validate test routines and schedules to ensure that test cases mimic external interfaces and address all browser and device types.

Develop system interaction or sequence diagrams.

Develop web site maps, application models, image templates, or page templates that meet project goals, user needs, or industry standards.

Document technical factors such as server load, bandwidth, database performance, and browser and device types.

Document test plans, testing procedures, or test results.

Establish appropriate server directory trees.

Evaluate code to ensure that it is valid, is properly structured, meets industry standards and is compatible with browsers, devices, or operating systems.

Evaluate or recommend server hardware or software.

Identify or maintain links to and from other web sites and check links to ensure proper functioning.

Identify problems uncovered by testing or customer feedback, and correct problems or refer problems to appropriate personnel for correction.

Incorporate technical considerations into web site design plans, such as budgets, equipment, performance requirements, or legal issues including accessibility and privacy.

Install and configure hypertext transfer protocol (HTTP) servers and associated operating systems.

Maintain understanding of current web technologies or programming practices through continuing education, reading, or participation in professional conferences, workshops, or groups.

Monitor security system performance logs to identify problems and notify security specialists when problems occur.

Perform or direct web site updates.

Perform web site tests according to planned schedules, or after any web site or product revisions.

Provide clear, detailed descriptions of web site specifications such as product features, activities, software, communication protocols, programming languages, and operating systems software and hardware.

Recommend and implement performance improvements.

Register web sites with search engines to increase web site traffic.

Renew domain name registrations.

Research, document, rate, or select alternatives for web architecture or technologies.

Respond to user email inquiries, or set up automated systems to send responses.

Select programming languages, design tools, or applications.

Write supporting code for web applications or web sites.

Write, design, or edit web page content, or direct others producing content.

Knowledge, Skills, and Abilities

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Operations Analysis — Analyzing needs and product requirements to create a design.

Programming — Writing computer programs for various purposes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Troubleshooting — determining causes of operating errors and deciding what to do about it.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Application Architecture and related technologies: N-Tier/Services Oriented Architecture, Web Services, WebLogic (Application Server), Oracle (RDBMS), PlumTree (Portal); WebLogic Web Server (Web Server); Internet Explorer & Netscape (Browser), Apache Struts (Development Framework); JBuilder Enterprise Edition (IDE); Concurrent Versions System-CVS (Version Management), Embarcadero Describe and System Architect (Architecture Modeling).

Programming and related technologies: Java, C, C++, Perl, Visual Basic, Oracle, MS Office, Lotus Notes/Domino, Java-based development tools (JBuilder), Excalibur RetrievalWare, Internet/Website and Content Management Technologies (i.e., Macromedia Dreamweaver, Fireworks, Flash, Adobe Illustrator and Photoshop, HTML, XML), Web Protocols and Technologies (XML, SOAP, HTML, HTTP, TCP/IP, etc.), Data Architecture and Database System Design, Database management software; Distributed database management software Business Process Management (i.e., Lombardi Works), Software and Systems Engineering, Information Security Operating System/Platform to include: Unix (Solaris), Windows, Linux, Thin Client (i.e., Citrix); Program testing software - defect tracking software; fault testing software; IBM Rational ClearQuest; Mercury Interactive LoadRunner.

Tools

    Computer servers — Application servers; Web servers

    Desktop computers

    High capacity removable media drives — Universal serial bus USB flash drives

    Notebook computers — Laptop computers

    Personal computers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Web Developer - Manager

Windows Systems Administrator - Developmental

Skill Community: Enterprise IT

Labor Group: Administration

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:

Long Summary:
 Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. The windows system administrator is responsible for Windows servers and the operating systems software and its successful integration with the hardware and applications software of the major computing systems across the organization. Responsible for installation and maintenance of the Windows-based CWE operating configurations on all organization Windows servers and desktops and also serve as technical referent on engineering review boards considering all additions to or changes to the operating environment. Install and maintain the Windows-based CWE operating configurations on all organization NT servers and desktops. Troubleshoot problems that may involve applications and the network. Provide technical support to applications and utility developers on requirements for integration into the operating environment. Provide guidance and technical assistance as needed. Maintain and update documentation on the operating systems' configuration. Manage software life cycles. Serve as technical referent on engineering review boards considering all additions to or changes to the operating environment. Participate in review boards for all changes or additions to the standard CWE configuration within the organization. Participate in various design reviews.

Short Summary:

The windows system administrator is responsible for Windows servers and the operating systems software and its successful integration with the hardware and applications software of the major computing systems across the organization. Responsible for installation and maintenance of the Windows-based CWE operating configurations on all organization Windows servers and desktops and also serve as technical referent on engineering review boards considering all additions to or changes to the operating environment. Install and maintain the Windows-based CWE operating configurations on all organization NT servers and desktops. Troubleshoot problems that may involve applications and the network. Provide technical support to applications and utility developers on requirements for integration into the operating environment. Provide guidance and technical assistance as needed. Maintain and update documentation on the operating systems' configuration. Manage software life cycles. Serve as technical referent on engineering review boards considering all additions to or changes to the operating environment. Participate in review boards for all changes or additions to the standard CWE configuration within the organization. Participate in various design reviews.

Duties, Tasks, and Responsibilities

A attend TEMs to discuss and agree upon MOAs –ensure MOA is within scope of server team's work.

Assess server loads and work with tech lead on developing tuning recommendations

Assist in server maintenance and special projects, during extended work hours.

Build servers: Provide technical configuration, setup, installation services, hardware and coordination for application projects

Communicate outage/degradation of server to management.

Coordinate server installation

Create and/or update the Asset Management record—responsible for integrity of asset management record.

Create request for service support (SRS) from internal/external service providers.

Ensure build report (procedure) is feasible, clear, and concise

Establish server baseline.

Implement baseline changes under tech lead oversight

Maintain server rooms

Monitor/support tape backup

Perform operating system software updates/upgrades

Perform server checklist

Perform technical evaluations, analysis, and troubleshooting for all "supported" servers in response to Help Desk Tickets—which includes but not limited the following activities: Server failures, full system outage.

Provide operational pager duty support.

Provide remote access to servers

Request hardware replacements

Respond to assigned change requests that are submitted by "internal" and "external" customers.

Restore file and data information.

Submit Build Reports for routine deliveries

Support customer in the development of a dedicated server build report as well as an internal build report.

Transition servers.

Understand and implement established technical and workflow procedures.

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Documentation —Ability to draft requirements documents, correspondence and procedures in accordance with policies

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Knowledge of the 's Communications and Information Security policies and practices.

Knowledge of the CIO's policies and procedures relating to the design, upgrading, and operating and maintaining networks.

Knowledge of theory and practice underlying satellite and LAN/WAN network operations.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Network Analysis — Ability to utilize complex network analysis tools to resolve complex network performance problems.

Oral Expression — Ability to communicate information and ideas in speaking so others will understand.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Presentation — Ability to write technical proposals for presentation to approval boards.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem

Procedures and Processes — Ability to provide explanations of complex technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Programming — Writing computer programs for various purposes

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Systems Environment — Demonstrated ability to effectively function in a multi-system and/or multi-application environment

Systems — Knowledge of multiple specialties such as operating systems, email or database platforms, storage technologies, or hardware support, including knowledge of operating systems (e.g., NT, Windows 2000, UNIX, XP).

Technologies — Knowledge of existing server technologies including principles and methods used in obtaining maximum utilization of server technologies.

Technology — Ability to assess the technical characteristics of new operating capabilities proposed for inclusion in the network to determine potential impact on network performance.

Writing — Communicating effectively in writing as appropriate for the needs of the audience

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Windows Systems Administrator - Expert

Skill Community: Enterprise IT

Labor Group: Administration

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. The windows system administrator is responsible for Windows servers and the operating systems software and its successful integration with the hardware and applications software of the major computing systems across the organization. Responsible for installation and maintenance of the Windows-based CWE operating configurations on all organization Windows servers and desktops and also serve as technical referent on engineering review boards considering all additions to or changes to the operating environment. Install and maintain the Windows-based CWE operating configurations on all organization NT servers and desktops. Troubleshoot problems that may involve applications and the network. Provide technical support to applications and utility developers on requirements for integration into the operating environment. Provide guidance and technical assistance as needed. Maintain and update documentation on the operating systems' configuration. Manage software life cycles. Serve as technical referent on engineering review boards considering all additions to or changes to the operating environment. Participate in review boards for all changes or additions to the standard CWE configuration within the organization. Participate in various design reviews.

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Documentation —Ability to draft requirements documents, correspondence and procedures in accordance with policies

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Knowledge of the 's Communications and Information Security policies and practices.

Knowledge of the CIO's policies and procedures relating to the design, upgrading, and operating and maintaining networks.

Knowledge of theory and practice underlying satellite and LAN/WAN network operations.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Network Analysis — Ability to utilize complex network analysis tools to resolve complex network performance problems.

Oral Expression — Ability to communicate information and ideas in speaking so others will understand.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Presentation — Ability to write technical proposals for presentation to approval boards.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem

Procedures and Processes — Ability to provide explanations of complex technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Programming — Writing computer programs for various purposes

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Systems Environment — Demonstrated ability to effectively function in a multi-system and/or multi-application environment

Systems — Knowledge of multiple specialties such as operating systems, email or database platforms, storage technologies, or hardware support, including knowledge of operating systems (e.g., NT, Windows 2000, UNIX, XP).

Technologies — Knowledge of existing server technologies including principles and methods used in obtaining maximum utilization of server technologies.

Technology — Ability to assess the technical characteristics of new operating capabilities proposed for inclusion in the network to determine potential impact on network performance.

Writing — Communicating effectively in writing as appropriate for the needs of the audience

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Windows Systems Administrator - Senior

Skill Community: Enterprise IT

Labor Group: Administration

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. The windows system administrator is responsible for Windows servers and the operating systems software and its successful integration with the hardware and applications software of the major computing systems across the organization. Responsible for installation and maintenance of the Windows-based CWE operating configurations on all organization Windows servers and desktops and also serve as technical referent on engineering review boards considering all additions to or changes to the operating environment. Install and maintain the Windows-based CWE operating configurations on all organization NT servers and desktops. Troubleshoot problems that may involve applications and the network. Provide technical support to applications and utility developers on requirements for integration into the operating environment. Provide guidance and technical assistance as needed. Maintain and update documentation on the operating systems' configuration. Manage software life cycles. Serve as technical referent on engineering review boards considering all additions to or changes to the operating environment. Participate in review boards for all changes or additions to the standard CWE configuration within the organization. Participate in various design reviews.

Short Summary:

The windows system administrator is responsible for Windows servers and the operating systems software and its successful integration with the hardware and applications software of the major computing systems across the organization. Responsible for installation and maintenance of the Windows-based CWE operating configurations on all organization Windows servers and desktops and also serve as technical referent on engineering review boards considering all additions to or changes to the operating environment. Install and maintain the Windows-based CWE operating configurations on all organization NT servers and desktops. Troubleshoot problems that may involve applications and the network. Provide technical support to applications and utility developers on requirements for integration into the operating environment. Provide guidance and technical assistance as needed. Maintain and update documentation on the operating systems' configuration. Manage software life cycles. Serve as technical referent on engineering review boards considering all additions to or changes to the operating environment. Participate in review boards for all changes or additions to the standard CWE configuration within the organization. Participate in various design reviews.

Duties, Tasks, and Responsibilities

A attend TEMs to discuss and agree upon MOAs –ensure MOA is within scope of server team's work.

Assess server loads and work with tech lead on developing tuning recommendations

Assist in server maintenance and special projects, during extended work hours.

Build servers: Provide technical configuration, setup, installation services, hardware and coordination for application projects

Communicate outage/degradation of server to management.

Coordinate server installation

Create and/or update the Asset Management record—responsible for integrity of asset management record.

Create request for service support (SRS) from internal/external service providers.

Ensure build report (procedure) is feasible, clear, and concise

Establish server baseline.

Implement baseline changes under tech lead oversight

Maintain server rooms

Monitor/support tape backup

Perform operating system software updates/upgrades

Perform server checklist

Perform technical evaluations, analysis, and troubleshooting for all "supported" servers in response to Help Desk Tickets—which includes but not limited the following activities: Server failures, full system outage.

Provide operational pager duty support.

Provide remote access to servers

Request hardware replacements

Respond to assigned change requests that are submitted by "internal" and "external" customers.

Restore file and data information.

Submit Build Reports for routine deliveries

Support customer in the development of a dedicated server build report as well as an internal build report.

Transition servers.

Understand and implement established technical and workflow procedures.

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Documentation —Ability to draft requirements documents, correspondence and procedures in accordance with policies

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Knowledge of the 's Communications and Information Security policies and practices.

Knowledge of the CIO's policies and procedures relating to the design, upgrading, and operating and maintaining networks.

Knowledge of theory and practice underlying satellite and LAN/WAN network operations.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Network Analysis — Ability to utilize complex network analysis tools to resolve complex network performance problems.

Oral Expression — Ability to communicate information and ideas in speaking so others will understand.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

ATP Security Prescreen Questionnaire
Personnel Security Office

When completed this form may be submitted electronically to Adrian Irby at adriantirby@gmail.com or faxed to (301) 317-6357. Feel free to call Adrian with any questions you may have at (301) 741-9530.

WAIVER

I understand that relative to my completion of the Avid Technology Professionals (ATP) Security Prescreen Questionnaire for the purpose of obtaining a security clearance or access, my answers and statements on these forms are privileged information between the United States government and myself and need not be disclosed to my employer.

I hereby voluntarily waive this privilege and authorize designated Security personnel to review any portion necessary of the ATP Security Prescreen Questionnaire for prescreening or clearance submittal purposes. I understand that my ATP Security Prescreen Questionnaire will only be used for security clearance purposes.

I agree to hold harmless Avid Technology Professionals, its agents, directors, employees, subsidiaries, affiliates, and representatives harmless from any claims, damages, losses, liabilities, costs and expenses (including attorney and legal fees), or any other charge or complaint filed, arising from the disclosing, retrieving, reporting, and use of the information referred to above.

I certify that the entries made by me on this form (ATP Security Prescreen Questionnaire) are true, complete, and accurate to the best of my knowledge and belief and are made in good faith and voluntarily.

Applicant Name: **Social Security Number:**

Emergency Point of Contact Name: **Emergency Point of Contact Number:**

DOB: **POB:**

Phone: *(Work):*   (   )   -   *(Home):*   (   )   -   **E-mail Address:**

Current Employer: **Phone:**   (   )   -

Current Security Officer: **Phone:**   (   )   -

May ATP contact your current security officer at this time?   ☐ YES ☐ NO

What level of security clearance do you hold?   ☐ TS/SCI ☐ TS ☐ S ☐ Other ☐ No clearance held

Who was the issuing agency?

What is the date of your most recent background investigation?

Have you ever undergone a polygraph exam?   ☐ YES   ☐ NO

☐ CI   or   ☐ Lifestyle   Date: Agency:

If necessary, would you be willing to take a polygraph?   ☐ YES   ☐ NO

Have you been debriefed from your security clearance or access or do you have a debrief date scheduled?   ☐ YES   ☐ NO

If yes, when?

Have you ever had a security clearance or access denied, suspended, or revoked?   ☐ YES   ☐ NO

If yes, why?

Is any of your immediate family, to include spouse, children, siblings, parents, and in-laws not US citizens?   ☐ YES   ☐ NO

Who?   Country?

Are you currently living with a non US citizen, to include an Au Pair?   ☐ YES   ☐ NO

Who?   Country?

Do you have a close or continuing relationship with a non US citizen?   ☐ YES   ☐ NO

Who?   Country?

Completed forms can be sent to Adrian Irby at adrian_irby@avidtec.com or faxed to (301) 317-6357.

Do you hold citizenship with any country in addition to the US?	☐ YES	☐ NO

If yes, where?

Do you have any foreign property, business connections, or foreign financial interests?	☐ YES	☐ NO

If yes, explain:

Have you ever had any contact with a representative of a foreign government?	☐ YES	☐ NO

If yes, explain:

Do you have any foreign travel that occurred within the last seven years?	☐ YES	☐ NO

If yes, list the date(s), location(s), and purpose of your visit(s):

Have you ever been arrested, investigated, detained, or charged with a criminal offense?	☐ YES	☐ NO

If yes, explain:

In the last seven years have you been a part of any civil court proceedings?	☐ YES	☐ NO

If yes, explain:

Have you ever had any disciplinary or counseling action related to your use of alcohol?	☐ YES	☐ NO

If yes, explain:

In the last seven years have you had your driver's license suspended, revoked, or received a traffic fine of over $150.00?	☐ YES	☐ NO

If yes, explain:

Since the age of 18, or in the last 10 years, have you ever experimented with, used or sold any illegal drugs even one time?	☐ YES	☐ NO

If yes, explain:

Have you ever experimented with, used or sold any illegal drugs even one time while holding a security clearance or a position of trust to include police officer, court official, etc.? If yes, explain:	☐ YES	☐ NO
In the last seven years have you consulted with a mental health professional about a mental health related condition other than marital, family, or grief counseling? If yes, explain:	☐ YES	☐ NO
Have you ever defaulted on a loan, declared bankruptcy, or had personal property repossessed? If yes, explain:	☐ YES	☐ NO
Do you currently have bills over 90 days delinquent? If yes, explain:	☐ YES	☐ NO
Have you ever had a tax lien or wage garnishment? If yes, explain:	☐ YES	☐ NO
In the past ten years have you been fired from a job or left employment under less than favorable conditions? If yes, explain:	☐ YES	☐ NO
Have you ever deliberately misused an automated information system? If yes, explain:	☐ YES	☐ NO

Please review the document located here: http://www.avidtec.com/security/

From the review of that document, are there any 'concerns' or 'conditions' in your background that could raise a security concern? ☐ YES ☐ NO

If yes, explain (include conditions that could mitigate security concerns):

When completed this form may be submitted electronically to Adrian Irby at adrir@comcast.net or faxed to (301) 317-6357. Feel free to call Adrian with any questions you may have at (301) 741-9530.

Letter of Intent

Vendor Clearance Pipeline Pilot

Date: 10/06/2017

I, _____ **,** authorize Avid Technology Professionals, LLC to

submit my candidate package for the Vendor Clearance Pipeline Pilot (also known as the

Government Uncleared Facilitation to Indoctrinate). If approved after this process - I

intend to use my clearance in a contract position for the sponsoring Agency.
