AGREEMENT

This Agreement, including the attached exhibit, ("Agreement"), is entered into on this ___ day of _____, 2017 ("Effective Date"), by and between **Avid Technology Professionals L.L.C.**, a Maryland Limited Liability Company ("Company"), with offices at 6996 Columbia Gateway Drive, Suite 204, Columbia, Maryland 21046, and _____, with residence at _____ ("Potential Employee").

WHEREAS, Avid is in the business of, among other things, providing software and systems engineering, and acquisition program management services to the U.S. Intelligence community;

WHEREAS, personnel providing services to the U.S. Intelligence community often are required to have and maintain U.S. security clearances;

WHEREAS, Avid and Potential Employee desire Avid to hire Potential Employee to provide services to the U.S. Intelligence community; and

WHEREAS, Avid and Potential Employee desire Avid to assist Potential Employee to obtain a U.S. security clearance so that Potential Employee can provide services to the U.S. Intelligence community on behalf of Avid.

NOW THEREFORE, in consideration of the obligations herein made and undertaken, the parties, intending to be legally bound, covenant and agree as follows:

1. Avid shall assist Potential Employee to obtain a U.S. security clearance, including paying all fees required by the U.S. Government, or third-parties approved by the U.S. Government, to conduct background checks.

2. Potential Employee shall provide all necessary assistance to Avid in obtaining a U.S. security clearance for Potential Employee. Avid may withdraw support based on the Potential Employee's compliance in these assistance items. This assistance shall include, but not exclude:

   2.i. Potential Employee shall return all required paperwork within 7 days of receiving any documentation.

   2.ii. Potential Employee shall return all communications and inquires in 7 days.

   2.iii. Potential Employee shall, if requested, pursue additional education and certifications.

3. Avid makes no representations or guarantee that the Potential Employee will be granted a U.S. security clearance. Avid may withdraw its support and assistance of Potential Employee's U.S. security clearance and shall have no further obligation to Potential Employee if (i) in Avid's reasonable belief Potential Employee has violated any warranty, term or obligation of this Agreement; or (ii) if in Avid's sole opinion its financial condition or business needs have changed so that it is no longer prudent to provide such support and assistance, and Avid provides written notice to the Potential Employee.

4. Potential Employee warrants that (i) all information provided shall be true, accurate and complete; (ii) he/she shall at all times comply with the terms and restrictions of any U.S. security clearance issued to him/her and all applicable laws and regulations; and (iii) from the Effective Date and for 18 months thereafter, he/she desires and intends to become an employee of Avid. Potential Employee shall fully indemnify Avid for any and all damages and costs, including attorneys' fees, incurred by Avid from any breach of any of the foregoing warranties.

5. In the event a U.S. security clearance is granted in connection with this Agreement, for a period of 18 months from the issuance of such clearance ("Restriction Period"), Potential Employee shall only use the clearance for the sole benefit of Avid. If the Potential Employee desires to use any U.S. security clearance granted in connection with this Agreement for the benefit of an entity other than Avid, including personal use or use for an employer other than Avid, during the Restriction Period, Potential Employee may do so only after paying to Avid seventeen thousand five-hundred dollars ($17,500).

6. In the event Potential Employee (i) withdraws his/her U.S. security clearance application; or (ii) does not become an employee of Avid within, and remain an employee of Avid during, the 18 months following the Effective Date for any reason whatsoever except that Avid cannot find Potential Employee a suitable job where suitability is defined as according to Avid's interests, Potential Employee shall pay to Avid seventeen thousand five hundred dollars ($17,500) within 7 days of an occurrence set forth in (i) or (ii). The payment requirement set forth in this Section 6 is in addition to, and not in lieu of or part of the payment obligation set forth in Section 5.

7. This Agreement shall be governed by and interpreted in accordance with the laws of the State of Maryland, excluding its rules of conflicts of law. Any and all claims, controversies or disputes arising out of or in connection with this Agreement shall be resolved in accordance with this Section. The parties consent to the exclusive jurisdiction of the state and federal courts located in Prince George's County, Maryland, for any such action, suit or proceeding. The parties waive any objection to the laying of venue for any suit, action or proceeding in such courts. The parties waive any right they might have to a trial by jury in any such suit, action or proceeding. The prevailing party in any action shall be entitled to recover its costs and attorneys' fees. The provisions of this Section shall survive the termination or expiration of this Agreement.

8. IN NO EVENT SHALL AVID BE LIABLE TO THE POTENTIAL EMPLOYEE FOR ANY INDIRECT, SPECIAL, OR CONSEQUENTIAL DAMAGES, EVEN IF AVID HAS BEEN ADVISED OF THE POSSIBILITY OR LIKELIHOOD OF SUCH DAMAGES.

9. This Agreement, including the exhibits, constitutes the entire agreement between the parties and supersedes and renders null and void all prior or contemporaneous agreements, understandings and proposals, whether oral or written, between the parties relating to the subject matter of this Agreement.

10. Any provision of this Agreement which is invalid, illegal or unenforceable in any jurisdiction shall, as to that jurisdiction, be ineffective to the extent of such invalidity, illegality or unenforceability, without in any manner affecting the remaining provisions of this Agreement in such jurisdiction or rendering that or any other provision of this Agreement invalid, illegal or unenforceable in any other jurisdiction.

11. The Potential Employee shall not be entitled to assign this Agreement or his/her rights or obligations under this Agreement, whether voluntarily or by operation of law, except with the written consent of Avid.

12. A failure by a party to assert its rights under this Agreement shall not be deemed to be a waiver of such rights nor shall any waiver be implied from any act or omission. All waivers to be effective must be in writing. No waiver by a party with respect to any right shall extend its effect to any subsequent breach of this Agreement of like or different kind unless such waiver explicitly provides otherwise.

13. This Agreement may be altered, modified, or amended only by a written agreement duly executed by both parties.

14. This Agreement may be executed in several counterparts, each of which shall be an original and all of which when taken together will constitute one agreement between the parties.

15. The parties have participated jointly in the negotiation and drafting of this Agreement. If an ambiguity or question of intent or interpretation arises, this Agreement shall be construed as if drafted jointly by the parties and no presumption or burden of proof shall arise favoring or disfavoring any party by virtue of the authorship of any of the provisions of this Agreement.

16. POTENTIAL EMPLOYEE ACKNOWLEDGES AND AGREES THAT THIS AGREEMENT DOES NOT CONSTITUTE ANY OFFER OF EMPLOYMENT OR AN EMPLOYMENT CONTRACT BETWEEN THE PARTIES.

IN WITNESS WHEREOF, the parties have caused this Agreement to be executed by their duly authorized representatives and to be effective as of the date first above written.

CONFESSED JUDGMENT PROMISSORY NOTE

THIS INSTRUMENT CONTAINS A CONFESSION OF JUDGMENT PROVISION WHICH CONSTITUTES A WAIVER OF IMPORTANT RIGHTS YOU MAY HAVE AS A DEBTOR AND ALLOWS THE CREDITOR TO OBTAIN A JUDGMENT AGAINST YOU WITHOUT ANY FURTHER NOTICE.

Whereas, the parties to this Confessed Judgment Promissory Note ("Note") have entered into a written agreement ("Agreement") whereby Avid Technology Professionals, LLC ("Creditor") agreed to assist the Debtor, as defined below, in obtaining a U.S. security clearance;

Whereas, the Agreement sets forth certain events under which the Debtor will be liable to pay the Creditor certain sums of money; and

Whereas, the parties desire to enter into this Note to expedite payment of any amounts owed by the Creditor under the Agreement. Now Therefore, the parties agree as follows:

FOR VALUE RECEIVED, the receipt and sufficiency of which are hereby acknowledged, _____ ("Debtor"), personally promises to pay to the order of the Creditor the sum of seventeen thousand five hundred dollars ($17,500) as required by section six of the Agreement. All amounts not paid when due under the Agreement shall be subject to interest at the lesser of 18% per annum or the maximum percentage permitted under applicable law.

FOR VALUE RECEIVED, the receipt and sufficiency of which are hereby acknowledged, the Debtor personally promises to pay to the order of the Creditor the sum of seventeen thousand five hundred dollars ($17,500) as required by section five of the Agreement. All amounts not paid when due under the Agreement shall be subject to interest at the lesser of 18% per annum or the maximum percentage permitted under applicable law.

The Debtor hereby expressly waives the benefit of any homestead exemption as to this debt and waives demand, protest, notice of presentment, notice of protest, and notice of non-payment and dishonor of this note. The Debtor agrees that this note is provided not in payment of, but as additional security for and evidence of obligations due to the Creditor under the Agreement and this Note is not accepted in lieu of the Creditor's other legal rights. The Debtor expressly agrees to submit to the personal jurisdiction of the state and federal courts located in Prince George's County, Maryland, and agrees that the forum for any litigation in connection with this Note, whether the litigation is initiated by the Debtor or Creditor, shall be in such courts. This Note shall be governed by and construed in accordance with the laws of the state of Maryland.

The Debtor knowingly, intentionally and voluntarily hereby irrevocably authorizes, empowers and appoints Henry Todd Whay of The Whay Law Firm, any other attorney admitted to practice before the Maryland courts, and any clerk of court, to appear for Debtor in any applicable court at any time and to confess judgment against the Debtor in favor of the Creditor for all or any part of the obligations set forth in this Note, plus all interest and costs, plus attorney's fees in an amount equal to 33% of the amount so confessed.

Applications Architect - Developmental

Skill Community: Enterprise IT

Labor Group: Application Services

Job Classification: Contractor

Status: Active

Date Effective: 10/5/2012

Standard Occupational Code:
 [15-1132] Software Developers, Applications
 [15-1132] Software Developers, Applications

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Applications architects serve as the lead technical resource providing strategic oversight and planning for applications architecture and design. Coordinates the development of new software system applications; provides technical expertise in software architecture; document and design software specifications for software engineers; produces software prototypes to demonstrate application of design. Analyzes, defines, and documents requirements for data, workflow, logical processes, hardware and operating system environment, and network connectivity, other systems interfaces, internal and external checks and controls, and outputs. Leads development of system prototypes to demonstrate application of design principles. Positions also assign technical experts for all major project reviews; monitor trends in system architecture and software development and engineering; and recommend training in software development technologies.

Short Summary:

Applications architects serve as the lead technical resource providing strategic oversight and planning for applications architecture and design. Coordinates the development of new software system applications; provides technical expertise in software architecture; document and design software specifications for software engineers; produces software prototypes to demonstrate application of design. Analyzes, defines, and documents requirements for data, workflow, logical processes, hardware and operating system environment, and network connectivity, other systems interfaces, internal and external checks and controls, and outputs. Leads development of system prototypes to demonstrate application of design principles. Positions also assign technical experts for all major project reviews; monitor trends in system architecture and software development and engineering; and recommend training in software development technologies.

Duties, Tasks, and Responsibilities

Analyzes, defines, and documents requirements for data, workflow, logical processes, hardware and operating system environment, and network connectivity, other systems interfaces, internal and external checks and controls, and outputs.

Develops architectural guidance for applications developers, defining target platforms, interface designs, development patterns and styles, and development languages and tools to be used to implement the business of the .

Leads development of system prototypes to demonstrate application of design principles

Monitors industry trends and directions; develops and presents substantive technical recommendations to senior management

Oversees the design, evaluation, selection, implementation and support of major applications development and production support tools and platforms

Provides complete assessments of the technical characteristics of proposals and alternatives considered in applications design

Provides technical expertise in systems architecture; participates in the formulation of software engineering practices; assesses feasibility of system plans; establishes priorities; and develops and implements plans that adhere to established strategic business and system objectives

Reviews and assesses technical proposals requesting changes or upgrades to existing applications

Knowledge, Skills, and Abilities

Ability to develop and present complex technical documents, procedures, reports, briefings and proposals.

Ability to develop and recommend data management policies, standards, practices and security measures to ensure effective and consistent data management operations.

Ability to develop methods of ensuring that the data incompatibilities among systems are systematically eliminated.

Ability to effectively diagnose, isolate and expediently resolve complex problems pertaining to data infrastructure

Ability to effectively monitor program/project development

Ability to evaluate and make recommendations regarding data integrity.

Ability to maintain currency on tools, methodologies, and technologies

Ability to project database resource requirements including personnel, software, equipment and facilities

Ability to provide an enterprise-wide perspective into IT-related decisions.

Ability to translate complex technical terminology, concepts and issues in terms understandable to technical and non-technical management and resources staff

Ability to translate expert knowledge of ETA and mission into the design of enterprise applications

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Complex Problem Solving — identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of 's and industry data standards and architectures; knowledge of design and integration principles of complex, knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Considerable knowledge of and application of Services Oriented Architecture and Agile Development Methods

Coordination — adjusting actions in relation to others' actions.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Expert knowledge of problem analysis, structured analysis and design, and programming techniques

Expert knowledge of systems design, development, and interconnectivity

Expert understanding of the implications of underlying infrastructure architectures and how they affect application design and development.

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Leadership – ability to resolve issues in a professional manner, lead working groups, negotiate, and create consensus.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Thorough knowledge of missions and needs, and considerable knowledge of Intelligence Community missions, needs, and information sharing requirements.

Writing — communicating effectively in writing as appropriate for the needs of the audience.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Cloud computing technologies and environments

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder.

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.

• Relevant certifications will be considered equivalent to three (3) months of specialized experience.

• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.

• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).

• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).

• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:

• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.

• Requires a minimum of three (3) years of experience specific to the skill.

• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Cloud computing technologies and environments

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder.

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Applications Architect - Manager

Skill Community: Enterprise IT

Labor Group: Application Services

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Applications architects serve as the lead technical resource providing strategic oversight and planning for applications architecture and design. Coordinates the development of new software system applications; provides technical expertise in software architecture; document and design software specifications for software engineers; produces software prototypes to demonstrate application of design. Analyzes, defines, and documents requirements for data, workflow, logical processes, hardware and operating system environment, and network connectivity, other systems interfaces, internal and external checks and controls, and outputs. Leads development of system prototypes to demonstrate application of design principles. Positions also assign technical experts for all major project reviews; monitor trends in system architecture and software development and engineering; and recommend training in software development technologies.

Short Summary:

Applications architects serve as the lead technical resource providing strategic oversight and planning for applications architecture and design. Coordinates the development of new software system applications; provides technical expertise in software architecture; document and design software specifications for software engineers; produces software prototypes to demonstrate application of design. Analyzes, defines, and documents requirements for data, workflow, logical processes, hardware and operating system environment, and network connectivity, other systems interfaces, internal and external checks and controls, and outputs. Leads development of system prototypes to demonstrate application of design principles. Positions also assign technical experts for all major project reviews; monitor trends in system architecture and software development and engineering; and recommend training in software development technologies.

Duties, Tasks, and Responsibilities

Analyzes, defines, and documents requirements for data, workflow, logical processes, hardware and operating system environment, and network connectivity, other systems interfaces, internal and external checks and controls, and outputs.

Develops architectural guidance for applications developers, defining target platforms, interface designs, development patterns and styles, and development languages and tools to be used to implement the business of the .

Leads development of system prototypes to demonstrate application of design principles

Monitors industry trends and directions; develops and presents substantive technical recommendations to senior management

Oversees the design, evaluation, selection, implementation and support of major applications development and production support tools and platforms

Provides complete assessments of the technical characteristics of proposals and alternatives considered in applications design

Provides technical expertise in systems architecture; participates in the formulation of software engineering practices; assesses feasibility of system plans; establishes priorities; and develops and implements plans that adhere to established strategic business and system objectives

Reviews and assesses technical proposals requesting changes or upgrades to existing applications

Knowledge, Skills, and Abilities

Ability to develop and present complex technical documents, procedures, reports, briefings and proposals.

Ability to develop and recommend data management policies, standards, practices and security measures to ensure effective and consistent data management operations.

Ability to develop methods of ensuring that the data incompatibilities among systems are systematically eliminated.

Ability to effectively diagnose, isolate and expediently resolve complex problems pertaining to data infrastructure

Ability to effectively monitor program/project development

Ability to evaluate and make recommendations regarding data integrity.

Ability to maintain currency on tools, methodologies, and technologies

Ability to project database resource requirements including personnel, software, equipment and facilities

Ability to provide an enterprise-wide perspective into IT-related decisions.

Ability to translate complex technical terminology, concepts and issues in terms understandable to technical and non-technical management and resources staff

Ability to translate expert knowledge of ETA and mission into the design of enterprise applications

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Complex Problem Solving — identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of 's and industry data standards and architectures; knowledge of design and integration principles of complex, knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Considerable knowledge of and application of Services Oriented Architecture and Agile Development Methods

Coordination — adjusting actions in relation to others' actions.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Expert knowledge of problem analysis, structured analysis and design, and programming techniques

Expert knowledge of systems design, development, and interconnectivity

Expert understanding of the implications of underlying infrastructure architectures and how they affect application design and development.

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Leadership – ability to resolve issues in a professional manner, lead working groups, negotiate, and create consensus.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Thorough knowledge of missions and needs, and considerable knowledge of Intelligence Community missions, needs, and information sharing requirements.

Writing — communicating effectively in writing as appropriate for the needs of the audience.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Cloud computing technologies and environments

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder.

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Applications Developer - Developmental

Skill Community: Enterprise IT

Labor Group: Application Services

Job Classification: Contractor

Status: Active

Date Effective: 10/7/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. This is work within the multi-level Applications Developer specialty. Positions work under minimal technical guidance provided by a more senior technical project leader. Positions are responsible for developing, testing, implementing, and maintaining complex applications and/or databases. Positions also draft technical program documentation, such as end-user operational instructions. Depending upon assignment, positions may be responsible for developing and maintaining software applications and/or databases, including web applications and user interfaces. Based on assignment, incumbents may serve as Contracting Officer Technical Representative responsible for a full range of contracting activities in coordination with contracting officer.

Short Summary:

This is work within the multi-level Applications Developer specialty. Positions work under minimal technical guidance provided by a more senior technical project leader. Positions are responsible for developing, testing, implementing, and maintaining complex applications and/or databases. Positions also draft technical program documentation, such as end-user operational instructions. Depending upon assignment, positions may be responsible for developing and maintaining software applications and/or databases, including web applications and user interfaces. Based on assignment, incumbents may serve as Contracting Officer Technical Representative responsible for a full range of contracting activities in coordination with contracting officer.

Duties, Tasks, and Responsibilities

Analyzes, designs, implements and maintains the database applications and structures

Attends meetings and training sessions to increase proficiency in job-related skills and procedures.

Based on assignment, may be responsible for: Design, Development and Maintenance of Software Applications and/or Databases.

Conducts unit/functional testing.

Consults with client to develop formal user requirements.

Consults with client to develop user requirements

Design, Development and Maintenance of Websites and Web Databases

Designs, and develops the layout and user interface.

Designs, codes and debugs web applications; designs and maintains interactive web databases and web services; designs graphics and user interfaces.

Develops, tests, implements and maintains complex applications and/or databases

Ensures that the new application can access data that has been transitioned to the new database structure.

Maintains currency on tools, methodologies, technologies and programming languages

Organizes content, develops color schemes, designs and produces graphics.

Participates in contracting activities to evaluate different acquisition approaches; develops a contracting strategy and completes required documentation; participates in the competitive evaluation process to identify qualified contractors; monitors and evaluates contractor performance and provides appropriate formal feedback and recommends contractor award and/or incentives.

Performs general administrative activities

Provides ongoing maintenance of basic web applications, databases, and web services.

Transitions data from legacy systems to new relational database structures.

Transitions the application/database to production; enhances application/database as needed

Translates user requirements from a formal requirements document into an application/database design.

Writes all necessary code.

Writes interfaces to companion applications or databases

Knowledge, Skills, and Abilities

Ability to explain protocols, technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Ability to plan, set goals and determine strategies for accomplishing results; monitors and evaluates progress toward goals

Ability to track and resolve programming bugs

Ability to translate user requirements into end-to-end design for applications/databases that may involve multiple interfaces to other applications or supporting database systems.

Ability to write clear, concise and effective requirements documents, correspondence, procedures and reports in accordance with policies.

Considerable knowledge and ability to program proficiently in two or more of the applications or database programming languages relevant to the project.

Considerable knowledge of the life-cycle process for software development, web applications, and implementation

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Cloud computing technologies and environments

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder.

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Applications Developer - Expert

Skill Community: Enterprise IT

Labor Group: Application Services

Job Classification: Contractor

Status: Active

Date Effective: 6/6/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. This is work within the multi-level Applications Developer specialty. Positions work under minimal technical guidance provided by a more senior technical project leader. Positions are responsible for developing, testing, implementing, and maintaining complex applications and/or databases. Positions also draft technical program documentation, such as end-user operational instructions. Depending upon assignment, positions may be responsible for developing and maintaining software applications and/or databases, including web applications and user interfaces. Based on assignment, incumbents may serve as Contracting Officer Technical Representative responsible for a full range of contracting activities in coordination with contracting officer.

Short Summary:

This is work within the multi-level Applications Developer specialty. Positions work under minimal technical guidance provided by a more senior technical project leader. Positions are responsible for developing, testing, implementing, and maintaining complex applications and/or databases. Positions also draft technical program documentation, such as end-user operational instructions. Depending upon assignment, positions may be responsible for developing and maintaining software applications and/or databases, including web applications and user interfaces. Based on assignment, incumbents may serve as Contracting Officer Technical Representative responsible for a full range of contracting activities in coordination with contracting officer.

Duties, Tasks, and Responsibilities

Analyzes, designs, implements and maintains the database applications and structures

Attends meetings and training sessions to increase proficiency in job-related skills and procedures.

Based on assignment, may be responsible for: Design, Development and Maintenance of Software Applications and/or Databases.

Conducts unit/functional testing.

Consults with client to develop formal user requirements.

Consults with client to develop user requirements

Design, Development and Maintenance of Websites and Web Databases

Designs, and develops the layout and user interface.

Designs, codes and debugs web applications; designs and maintains interactive web databases and web services; designs graphics and user interfaces.

Develops, tests, implements and maintains complex applications and/or databases

Ensures that the new application can access data that has been transitioned to the new database structure.

Maintains currency on tools, methodologies, technologies and programming languages

Organizes content, develops color schemes, designs and produces graphics.

Participates in contracting activities to evaluate different acquisition approaches; develops a contracting strategy and completes required documentation; participates in the competitive evaluation process to identify qualified contractors; monitors and evaluates contractor performance and provides appropriate formal feedback and recommends contractor award and/or incentives.

Performs general administrative activities

Provides ongoing maintenance of basic web applications, databases, and web services.

Transitions data from legacy systems to new relational database structures.

Transitions the application/database to production; enhances application/database as needed

Translates user requirements from a formal requirements document into an application/database design.

Writes all necessary code.

Writes interfaces to companion applications or databases

Knowledge, Skills, and Abilities

Ability to explain protocols, technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Ability to plan, set goals and determine strategies for accomplishing results; monitors and evaluates progress toward goals

Ability to track and resolve programming bugs

Ability to translate user requirements into end-to-end design for applications/databases that may involve multiple interfaces to other applications or supporting database systems.

Ability to write clear, concise and effective requirements documents, correspondence, procedures and reports in accordance with policies.

Considerable knowledge and ability to program proficiently in two or more of the applications or database programming languages relevant to the project.

Considerable knowledge of the life-cycle process for software development, web applications, and implementation

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Cloud computing technologies and environments

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Cloud computing technologies and environments

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder.

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Applications Manager - Developmental

Skill Community: Enterprise IT

Labor Group: Application Services

Job Classification: Contractor

Status: Active

Date Effective: 6/6/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. This is technical, management work within the multi-level Applications Developer specialty of the Information Technology occupation. Positions serve as the senior technical referent for Applications and are responsible for managing staff and/or contractors in the performance of the design, development, implementation and maintenance of applications, databases and websites within the IT Architecture. Positions are also responsible for directing and monitoring the strategic technical planning for the development, implementation, and maintenance of applications, databases and web applications in support of current and future mission needs. Positions work collaboratively with senior management to develop and implement long-range plans, assess project and program feasibility, perform cost versus benefit analysis, prioritize projects and initiatives, and make major architectural design decisions. Duties include reviewing application/systems architecture and designs to assess risk, trade-offs and alternative solutions; coordinating with the organization's data architects to ensure the synchronization of organizational data; and developing and implementing system plans that address the information requirements of the enterprise. Based on assignment, incumbents oversee and manage contracting activities associated to Contracting Officer's Technical Representative responsibilities; ensures coordination with the contacting officer.

Short Summary:

This is technical, management work within the multi-level Applications Developer specialty of the Information Technology occupation. Positions serve as the senior technical referent for Applications and are responsible for managing staff and/or contractors in the performance of the design, development, implementation and maintenance of applications, databases and websites within the IT Architecture. Positions are also responsible for directing and monitoring the strategic technical planning for the development, implementation, and maintenance of applications, databases and web applications in support of current and future mission needs. Positions work collaboratively with senior management to develop and implement long-range plans, assess project and program feasibility, perform cost versus benefit analysis, prioritize projects and initiatives, and make major architectural design decisions. Duties include reviewing application/systems architecture and designs to assess risk, trade-offs and alternative solutions; coordinating with the organization's data architects to ensure the synchronization of organizational data; and developing and implementing system plans that address the information requirements of the enterprise. Based on assignment, incumbents oversee and manage contracting activities associated to Contracting Officer's Technical Representative responsibilities; ensures coordination with the contacting officer.

Duties, Tasks, and Responsibilities

Conducts long range planning; evaluates project feasibilities and priorities; develops and tracks project schedules and budgets.

Coordinates on staff resource decisions to meet corporate strategic goals

Coordinates with the 's data architects to ensure the synchronization of organizational data.

Depending on assignment, may play an active role in recruiting, external hiring, and selection for the component

Develops and implements system plans that address the information requirements of the enterprise and adhere to established strategic business and systems objectives.

Develops and manages program/project budgets

Directs and monitors the technical planning, development, implementation and maintenance of applications, databases and web applications.

Directs the work of Managers and/or Senior Project Managers to ensure that CIO work is performed in an accurate and timely fashion.

Ensures Security, Safety, and Counter-Intelligence regulations, policies, and procedures are followed.

Ensures complex system problems are resolved

Evaluates the performance and skills of subordinates and provides performance and developmental feedback on an ongoing basis; rewards, retains and disciplines staff as appropriate; resolves interpersonal/teamwork related problems; oversees training and development of staff

Incorporates and manages diversity and "best management practices " in the workplace

Maintains currency on tools, methodologies, technologies and programming languages

Manages and provides direction and guidance to staff or contractors in the performance of design, development, implementation and maintenance of applications, databases and websites.

Manages the establishment of performance objectives and standards; assists subordinates including other Managers and/or Senior Project Managers in setting individual goals

Monitors program/project development

Participates in personnel selection and assignment processes

Performs general administrative activities

Prioritizes and delegates work/project assignments; assesses and determines team member composition

Provides advice and guidance on CIO processes, policy interpretation, workflow, and Directorate/MSO priorities. Provides expert technical guidance and direction to project managers and application developers as necessary

Represents the organization as a member of various internal and external boards, task forces and working groups relevant to CIO's mission, providing advice and guidance on organization-wide and - wide CIO plans, policies, and regulations, and reviewing the adequacy of resources available to organization/CIO programs.

Reviews and prepares complex correspondence, procedures, manuals, reports, briefings and technical designs.

Reviews application/systems architecture and designs to assess risks, tradeoffs and alternative solutions

Serves as an Agent for Change in the component and CIO; manages the successful and smooth transition from current to desired culture, practices, structure and overall organizational environment as defined by senior leaders.

Sets own career development objectives and continuously improves own level of substantive competence. Maintains relevant certifications

Knowledge, Skills, and Abilities

Ability to address training and career development needs of individuals, teams or organization to achieve strategic organizational objectives. Ability to anticipate the changing demands for skills and plans to meet the future demands.

Ability to assess risks, tradeoffs and alternative solutions when reviewing application/systems architecture and designs

Ability to be an agent for change, demonstrated by building commitment and allocating resources to make change happen; leading the definition of organizational vision and mission; designing processes, structures, reporting relationships, roles and responsibilities to support change; designing or participating in the design of a transition strategy and communications campaign for change; implementing a strategy for change

Ability to build a business case for a new technology, project or application with complete funding profile including return on investment analysis.

Ability to delegate, coordinate, supervise, motivate, and evaluate staff effectively to achieve results.

Ability to develop and present complex correspondence, technical documents, reports and proposals.

Ability to develop budget estimates and ensure that project expenditures remain within budget.

Ability to effectively define and communicate organizational vision, objectives, initiatives and issues; inspire and motivate others to share vision and work toward its achievement; and collaborate with others to achieve outstanding performance, especially in difficult circumstances and major transitions.

Ability to effectively monitor program/project development. Thorough understanding of the Project Management Process (CPMP).

Ability to influence strategic or high impact decisions using effective negotiation skills to address difficult issues with Senior and Executive Managers.

Ability to translate complex technical terminology, concepts and issues in terms understandable to management and staff.

Considerable knowledge of Project Management concepts and principles.

Effective leadership and management skills, gained through previous assignments in formal and informal leadership roles

Highly effective interpersonal skills, demonstrated by building relationships and networks within the Intelligence Community, the , and with subordinates.

Technical knowledge appropriate to the assignment:
- Thorough knowledge of software life-cycle management.
- Fundamental knowledge of several of the application or database programming languages relevant to current projects and Enterprise Technical Architecture.
- Ability to maintain currency on tools, methodologies, technologies and programming languages.
- Thorough understanding of services with particular depth in the area of applications services.

Thorough knowledge and ability to adhere to and ensure compliance with all Security and Safety standards, Counter-Intelligence policies and procedures

Thorough knowledge of Contracting Officer's Technical Representative concepts and principles.

Working knowledge of Resource Management policies and procedures gained from previous experience with Contracting, Procurement, Budgeting, Finance and/or Project Management

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Cloud computing technologies and environments

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Duties, Tasks, and Responsibilities

Conducts long range planning; evaluates project feasibilities and priorities; develops and tracks project schedules and budgets.

Coordinates on staff resource decisions to meet corporate strategic goals

Coordinates with the 's data architects to ensure the synchronization of organizational data.

Depending on assignment, may play an active role in recruiting, external hiring, and selection for the component

Develops and implements system plans that address the information requirements of the enterprise and adhere to established strategic business and systems objectives.

Develops and manages program/project budgets

Directs and monitors the technical planning, development, implementation and maintenance of applications, databases and web applications.

Directs the work of Managers and/or Senior Project Managers to ensure that CIO work is performed in an accurate and timely fashion.

Ensures Security, Safety, and Counter-Intelligence regulations, policies, and procedures are followed.

Ensures complex system problems are resolved

Evaluates the performance and skills of subordinates and provides performance and developmental feedback on an ongoing basis; rewards, retains and disciplines staff as appropriate; resolves interpersonal/teamwork related problems; oversees training and development of staff

Incorporates and manages diversity and "best management practices " in the workplace

Maintains currency on tools, methodologies, technologies and programming languages

Manages and provides direction and guidance to staff or contractors in the performance of design, development, implementation and maintenance of applications, databases and websites.

Manages the establishment of performance objectives and standards; assists subordinates including other Managers and/or Senior Project Managers in setting individual goals

Monitors program/project development

Participates in personnel selection and assignment processes

Performs general administrative activities

Prioritizes and delegates work/project assignments; assesses and determines team member composition

Provides advice and guidance on CIO processes, policy interpretation, workflow, and Directorate/MSO priorities. Provides expert technical guidance and direction to project managers and application developers as necessary

Represents the organization as a member of various internal and external boards, task forces and working groups relevant to CIO's mission, providing advice and guidance on organization-wide and -wide CIO plans, policies, and regulations, and reviewing the adequacy of resources available to organization/CIO programs.

Reviews and prepares complex correspondence, procedures, manuals, reports, briefings and technical designs.

Reviews application/systems architecture and designs to assess risks, tradeoffs and alternative solutions

Serves as an Agent for Change in the component and CIO; manages the successful and smooth transition from current to desired culture, practices, structure and overall organizational environment as defined by senior leaders.

Sets own career development objectives and continuously improves own level of substantive competence. Maintains relevant certifications

Knowledge, Skills, and Abilities

Ability to address training and career development needs of individuals, teams or organization to achieve strategic organizational objectives. Ability to anticipate the changing demands for skills and plans to meet the future demands.

Ability to assess risks, tradeoffs and alternative solutions when reviewing application/systems architecture and designs

Ability to be an agent for change, demonstrated by building commitment and allocating resources to make change happen; leading the definition of organizational vision and mission; designing processes, structures, reporting relationships, roles and responsibilities to support change; designing or participating in the design of a transition strategy and communications campaign for change; implementing a strategy for change

Ability to build a business case for a new technology, project or application with complete funding profile including return on investment analysis.

Ability to delegate, coordinate, supervise, motivate, and evaluate staff effectively to achieve results.

Ability to develop and present complex correspondence, technical documents, reports and proposals.

Ability to develop budget estimates and ensure that project expenditures remain within budget.

Ability to effectively define and communicate organizational vision, objectives, initiatives and issues; inspire and motivate others to share vision and work toward its achievement; and collaborate with others to achieve outstanding performance, especially in difficult circumstances and major transitions.

Ability to effectively monitor program/project development. Thorough understanding of the Project Management Process (CPMP).

Ability to influence strategic or high impact decisions using effective negotiation skills to address difficult issues with Senior and Executive Managers.

Ability to translate complex technical terminology, concepts and issues in terms understandable to management and staff.

Considerable knowledge of Project Management concepts and principles.

Effective leadership and management skills, gained through previous assignments in formal and informal leadership roles

Highly effective interpersonal skills, demonstrated by building relationships and networks within the Intelligence Community, the , and with subordinates.

Technical knowledge appropriate to the assignment:
- Thorough knowledge of software life-cycle management.
- Fundamental knowledge of several of the application or database programming languages relevant to current projects and Enterprise Technical Architecture.
- Ability to maintain currency on tools, methodologies, technologies and programming languages.
- Thorough understanding of services with particular depth in the area of applications services.

Thorough knowledge and ability to adhere to and ensure compliance with all Security and Safety standards, Counter-Intelligence policies and procedures

Thorough knowledge of Contracting Officer's Technical Representative concepts and principles.

Working knowledge of Resource Management policies and procedures gained from previous experience with Contracting, Procurement, Budgeting, Finance and/or Project Management

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. This is technical, management work within the multi-level Applications Developer specialty of the Information Technology occupation. Positions serve as the senior technical referent for Applications and are responsible for managing staff and/or contractors in the performance of the design, development, implementation and maintenance of applications, databases and websites within the IT Architecture. Positions are also responsible for directing and monitoring the strategic technical planning for the development, implementation, and maintenance of applications, databases and web applications in support of current and future mission needs. Positions work collaboratively with senior management to develop and implement long-range plans, assess project and program feasibility, perform cost versus benefit analysis, prioritize projects and initiatives, and make major architectural design decisions. Duties include reviewing application/systems architecture and designs to assess risk, trade-offs and alternative solutions; coordinating with the organization's data architects to ensure the synchronization of organizational data; and developing and implementing system plans that address the information requirements of the enterprise. Based on assignment, incumbents oversee and manage contracting activities associated to Contracting Officer's Technical Representative responsibilities; ensures coordination with the contacting officer.

Short Summary:

This is technical, management work within the multi-level Applications Developer specialty of the Information Technology occupation. Positions serve as the senior technical referent for Applications and are responsible for managing staff and/or contractors in the performance of the design, development, implementation and maintenance of applications, databases and websites within the IT Architecture. Positions are also responsible for directing and monitoring the strategic technical planning for the development, implementation, and maintenance of applications, databases and web applications in support of current and future mission needs. Positions work collaboratively with senior management to develop and implement long-range plans, assess project and program feasibility, perform cost versus benefit analysis, prioritize projects and initiatives, and make major architectural design decisions. Duties include reviewing application/systems architecture and designs to assess risk, trade-offs and alternative solutions; coordinating with the organization's data architects to ensure the synchronization of organizational data; and developing and implementing system plans that address the information requirements of the enterprise. Based on assignment, incumbents oversee and manage contracting activities associated to Contracting Officer's Technical Representative responsibilities; ensures coordination with the contacting officer.

Duties, Tasks, and Responsibilities

Conducts long range planning; evaluates project feasibilities and priorities; develops and tracks project schedules and budgets.

Coordinates on staff resource decisions to meet corporate strategic goals

Coordinates with the 's data architects to ensure the synchronization of organizational data.

Depending on assignment, may play an active role in recruiting, external hiring, and selection for the component

Develops and implements system plans that address the information requirements of the enterprise and adhere to established strategic business and systems objectives.

Develops and manages program/project budgets

Directs and monitors the technical planning, development, implementation and maintenance of applications, databases and web applications.

Directs the work of Managers and/or Senior Project Managers to ensure that CIO work is performed in an accurate and timely fashion.

Ensures Security, Safety, and Counter-Intelligence regulations, policies, and procedures are followed.

Ensures complex system problems are resolved

Evaluates the performance and skills of subordinates and provides performance and developmental feedback on an ongoing basis; rewards, retains and disciplines staff as appropriate; resolves interpersonal/teamwork related problems; oversees training and development of staff

Incorporates and manages diversity and "best management practices " in the workplace

Maintains currency on tools, methodologies, technologies and programming languages

Manages and provides direction and guidance to staff or contractors in the performance of design, development, implementation and maintenance of applications, databases and websites.

Manages the establishment of performance objectives and standards; assists subordinates including other Managers and/or Senior Project Managers in setting individual goals

Monitors program/project development

Participates in personnel selection and assignment processes

Performs general administrative activities

Prioritizes and delegates work/project assignments; assesses and determines team member composition

Provides advice and guidance on CIO processes, policy interpretation, workflow, and Directorate/MSO priorities. Provides expert technical guidance and direction to project managers and application developers as necessary

Represents the organization as a member of various internal and external boards, task forces and working groups relevant to CIO's mission, providing advice and guidance on organization-wide and -wide CIO plans, policies, and regulations, and reviewing the adequacy of resources available to organization/CIO programs.

Reviews and prepares complex correspondence, procedures, manuals, reports, briefings and technical designs.

Reviews application/systems architecture and designs to assess risks, tradeoffs and alternative solutions

Serves as an Agent for Change in the component and CIO; manages the successful and smooth transition from current to desired culture, practices, structure and overall organizational environment as defined by senior leaders.

Sets own career development objectives and continuously improves own level of substantive competence. Maintains relevant certifications

Knowledge, Skills, and Abilities

Ability to address training and career development needs of individuals, teams or organization to achieve strategic organizational objectives. Ability to anticipate the changing demands for skills and plans to meet the future demands.

Ability to assess risks, tradeoffs and alternative solutions when reviewing application/systems architecture and designs

Ability to be an agent for change, demonstrated by building commitment and allocating resources to make change happen; leading the definition of organizational vision and mission; designing processes, structures, reporting relationships, roles and responsibilities to support change; designing or participating in the design of a transition strategy and communications campaign for change; implementing a strategy for change

Ability to build a business case for a new technology, project or application with complete funding profile including return on investment analysis.

Ability to delegate, coordinate, supervise, motivate, and evaluate staff effectively to achieve results.

Ability to develop and present complex correspondence, technical documents, reports and proposals.

Ability to develop budget estimates and ensure that project expenditures remain within budget.

Ability to effectively define and communicate organizational vision, objectives, initiatives and issues; inspire and motivate others to share vision and work toward its achievement; and collaborate with others to achieve outstanding performance, especially in difficult circumstances and major transitions.

Ability to effectively monitor program/project development. Thorough understanding of the Project Management Process (CPMP).

Ability to influence strategic or high impact decisions using effective negotiation skills to address difficult issues with Senior and Executive Managers.

Ability to translate complex technical terminology, concepts and issues in terms understandable to management and staff.

Considerable knowledge of Project Management concepts and principles.

Effective leadership and management skills, gained through previous assignments in formal and informal leadership roles

Highly effective interpersonal skills, demonstrated by building relationships and networks within the Intelligence Community, the , and with subordinates.

Technical knowledge appropriate to the assignment:
- Thorough knowledge of software life-cycle management.
- Fundamental knowledge of several of the application or database programming languages relevant to current projects and Enterprise Technical Architecture.
- Ability to maintain currency on tools, methodologies, technologies and programming languages.
- Thorough understanding of services with particular depth in the area of applications services.

Thorough knowledge and ability to adhere to and ensure compliance with all Security and Safety standards, Counter-Intelligence policies and procedures

Thorough knowledge of Contracting Officer's Technical Representative concepts and principles.

Working knowledge of Resource Management policies and procedures gained from previous experience with Contracting, Procurement, Budgeting, Finance and/or Project Management

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Cloud computing technologies and environments

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Applications Manager - Senior

Skill Community: Enterprise IT

Labor Group: Application Services

Job Classification: Contractor

Status: Active

Date Effective: 6/6/2012

Standard Occupational Code:
[15-1132] Software Developers, Applications

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. This is technical, management work within the multi-level Applications Developer specialty of the Information Technology occupation. Positions serve as the senior technical referent for Applications and are responsible for managing staff and/or contractors in the performance of the design, development, implementation and maintenance of applications, databases and websites within the IT Architecture. Positions are also responsible for directing and monitoring the strategic technical planning for the development, implementation, and maintenance of applications, databases and web applications in support of current and future mission needs. Positions work collaboratively with senior management to develop and implement long-range plans, assess project and program feasibility, perform cost versus benefit analysis, prioritize projects and initiatives, and make major architectural design decisions. Duties include reviewing application/systems architecture and designs to assess risk, trade-offs and alternative solutions; coordinating with the organization's data architects to ensure the synchronization of organizational data; and developing and implementing system plans that address the information requirements of the enterprise. Based on assignment, incumbents oversee and manage contracting activities associated to Contracting Officer's Technical Representative responsibilities; ensures coordination with the contacting officer.

Duties, Tasks, and Responsibilities

Conducts long range planning; evaluates project feasibilities and priorities; develops and tracks project

schedules and budgets.

Coordinates on staff resource decisions to meet corporate strategic goals

Coordinates with the 's data architects to ensure the synchronization of organizational data.

Depending on assignment, may play an active role in recruiting, external hiring, and selection for the component

Develops and implements system plans that address the information requirements of the enterprise and adhere to established strategic business and systems objectives.

Develops and manages program/project budgets

Directs and monitors the technical planning, development, implementation and maintenance of applications, databases and web applications.

Directs the work of Managers and/or Senior Project Managers to ensure that CIO work is performed in an accurate and timely fashion.

Ensures Security, Safety, and Counter-Intelligence regulations, policies, and procedures are followed.

Ensures complex system problems are resolved

Evaluates the performance and skills of subordinates and provides performance and developmental feedback on an ongoing basis; rewards, retains and disciplines staff as appropriate; resolves interpersonal/teamwork related problems; oversees training and development of staff

Incorporates and manages diversity and "best management practices " in the workplace

Maintains currency on tools, methodologies, technologies and programming languages

Manages and provides direction and guidance to staff or contractors in the performance of design, development, implementation and maintenance of applications, databases and websites.

Manages the establishment of performance objectives and standards; assists subordinates including other Managers and/or Senior Project Managers in setting individual goals

Monitors program/project development

Participates in personnel selection and assignment processes

Performs general administrative activities

Prioritizes and delegates work/project assignments; assesses and determines team member composition

Provides advice and guidance on CIO processes, policy interpretation, workflow, and Directorate/MSO priorities. Provides expert technical guidance and direction to project managers and application developers as necessary

Represents the organization as a member of various internal and external boards, task forces and working groups relevant to CIO's mission, providing advice and guidance on organization-wide and -wide CIO plans, policies, and regulations, and reviewing the adequacy of resources available to organization/CIO programs.

Reviews and prepares complex correspondence, procedures, manuals, reports, briefings and technical designs.

Reviews application/systems architecture and designs to assess risks, tradeoffs and alternative solutions

Serves as an Agent for Change in the component and CIO; manages the successful and smooth transition from current to desired culture, practices, structure and overall organizational environment as defined by senior leaders.

Sets own career development objectives and continuously improves own level of substantive competence. Maintains relevant certifications

Knowledge, Skills, and Abilities

Ability to address training and career development needs of individuals, teams or organization to achieve strategic organizational objectives. Ability to anticipate the changing demands for skills and plans to meet the future demands.

Ability to assess risks, tradeoffs and alternative solutions when reviewing application/systems architecture and designs

Ability to be an agent for change, demonstrated by building commitment and allocating resources to make change happen; leading the definition of organizational vision and mission; designing processes, structures, reporting relationships, roles and responsibilities to support change; designing or participating in the design of a transition strategy and communications campaign for change; implementing a strategy for change

Ability to build a business case for a new technology, project or application with complete funding profile including return on investment analysis.

Ability to delegate, coordinate, supervise, motivate, and evaluate staff effectively to achieve results.

Ability to develop and present complex correspondence, technical documents, reports and proposals.

Ability to develop budget estimates and ensure that project expenditures remain within budget.

Ability to effectively define and communicate organizational vision, objectives, initiatives and issues; inspire and motivate others to share vision and work toward its achievement; and collaborate with others to achieve outstanding performance, especially in difficult circumstances and major transitions.

Ability to effectively monitor program/project development. Thorough understanding of the Project Management Process (CPMP).

Ability to influence strategic or high impact decisions using effective negotiation skills to address difficult issues with Senior and Executive Managers.

Ability to translate complex technical terminology, concepts and issues in terms understandable to management and staff.

Considerable knowledge of Project Management concepts and principles.

Effective leadership and management skills, gained through previous assignments in formal and informal leadership roles

Highly effective interpersonal skills, demonstrated by building relationships and networks within the Intelligence Community, the , and with subordinates.

Technical knowledge appropriate to the assignment:
- Thorough knowledge of software life-cycle management.
- Fundamental knowledge of several of the application or database programming languages relevant to current projects and Enterprise Technical Architecture.
- Ability to maintain currency on tools, methodologies, technologies and programming languages.
- Thorough understanding of services with particular depth in the area of applications services.

Thorough knowledge and ability to adhere to and ensure compliance with all Security and Safety standards, Counter-Intelligence policies and procedures

Thorough knowledge of Contracting Officer's Technical Representative concepts and principles.

Working knowledge of Resource Management policies and procedures gained from previous experience with Contracting, Procurement, Budgeting, Finance and/or Project Management

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).

• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Cloud computing technologies and environments

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Business Process Manager - Developmental

Skill Community: Enterprise IT

Labor Group: Project Management

Job Classification: Contractor

Status: Active

Date Effective: 5/30/2012

Standard Occupational Code:
 [15-1121] Computer Systems Analysts

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Analyze user needs to develop business process/software solutions. Assists in the design of processes, software or customizes software for client use with the aim of optimizing operational efficiency. Apply principles and techniques of business management, computer science, engineering, and mathematical analysis and other methodology as appropriate (e.g. Six Sigma; Rational Unified Process). Develops plans for automated information systems from project inception to conclusion including systems requirements determination. Manages software development and support using formal specifications, data flow diagrams, other accepted design techniques and Computer Aided Software Engineering (CASE) tools.

Short Summary:

Analyzes user interfaces, maintain hardware and software performance tuning, analyze workload and computer usage, maintain interfaces with outside systems, analyze down times, analyze proposed system modifications, upgrades and new COTS. Defines the problem, and develops system requirements and program specifications, from which programmers prepare detailed flow charts, programs, and tests. Coordinates closely with programmers to ensure proper implementation of program and system specifications. Develops, in conjunction with functional users, system alternative solutions.

Duties, Tasks, and Responsibilities

Analyze information to determine, recommend, and plan computer specifications and layouts, and peripheral equipment modifications.

Analyze user needs and software requirements to determine approach and feasibility of design within time and cost constraints.

Confer with data processing and project managers to obtain information on limitations and capabilities for data processing projects.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with customers about software system design and maintenance.

Consult with engineering staff to evaluate interface between hardware and software, develop specifications and performance requirements and resolve customer problems.

Estimate software development costs and schedule.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Obtain and evaluate information on factors such as reporting formats required, costs, and security needs to determine hardware configuration.

Prepare reports and correspondence concerning project specifications, activities and status.

Review existing programs and assist in making refinements, reducing operating time, and improve current techniques.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Knowledge and understanding of Business Management and Administration

Knowledge and understanding of Computers and Electronics

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Problem Solving — Identifying problems and reviewing related information to develop and evaluate options and implement solutions.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Customer relationship management CRM software — ACT! software; Microsoft Dynamics CRM; Performance Solutions Technology ManagePro; Provisioning software

Enterprise resource planning ERP software — Microsoft Dynamics AX; Microsoft Dynamics NAV; Oracle E-Business Suite; Oracle JD Edwards OneWorld

Financial tracking software

Project Management software (Project, Primavera)

Tools

Desktop computers

High end computer servers — Application servers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Business Process Manager - Expert

Skill Community: Enterprise IT

Labor Group: Project Management

Job Classification: Contractor

Status: Active

Date Effective: 5/30/2012

Standard Occupational Code:
 [15-1121] Computer Systems Analysts

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Analyze user needs to develop business process/software solutions. Assists in the design of processes, software or customizes software for client use with the aim of optimizing operational efficiency. Apply principles and techniques of business management, computer science, engineering, and mathematical analysis and other methodology as appropriate (e.g. Six Sigma; Rational Unified Process). Develops plans for automated information systems from project inception to conclusion including systems requirements determination. Manages software development and support using formal specifications, data flow diagrams, other accepted design techniques and Computer Aided Software Engineering (CASE) tools.

Short Summary:

Analyzes user interfaces, maintain hardware and software performance tuning, analyze workload and computer usage, maintain interfaces with outside systems, analyze downtimes, analyze proposed system modifications, upgrades and new COTS. Defines the problem, and develops system requirements and program specifications, from which programmers prepare detailed flow charts, programs, and tests. Coordinates closely with programmers to ensure proper implementation of program and system specifications. Develops, in conjunction with functional users, system alternative solutions.

Duties, Tasks, and Responsibilities

Analyze information to determine, recommend, and plan computer specifications and layouts, and peripheral equipment modifications.

Analyze user needs and software requirements to determine approach and feasibility of design within time and cost constraints.

Confer with data processing and project managers to obtain information on limitations and capabilities for data processing projects.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with customers about software system design and maintenance.

Consult with engineering staff to evaluate interface between hardware and software, develop specifications and performance requirements and resolve customer problems.

Estimate software development costs and schedule.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Obtain and evaluate information on factors such as reporting formats required, costs, and security needs to determine hardware configuration.

Prepare reports and correspondence concerning project specifications, activities and status.

Review existing programs and assist in making refinements, reducing operating time, and improve current techniques.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Business Management and Administration

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Customer relationship management CRM software — ACT! software; Microsoft Dynamics CRM; Performance Solutions Technology ManagePro; Provisioning software

Enterprise resource planning ERP software — Microsoft Dynamics AX; Microsoft Dynamics NAV; Oracle E-Business Suite; Oracle JD Edwards OneWorld

Financial tracking software

Assists in the design of processes, software or customizes software for client use with the aim of optimizing operational efficiency. Apply principles and techniques of business management, computer science, engineering, and mathematical analysis and other methodology as appropriate (e.g. Six Sigma; Rational Unified Process). Develops plans for automated information systems from project inception to conclusion including systems requirements determination. Manages software development and support using formal specifications, data flow diagrams, other accepted design techniques and Computer Aided Software Engineering (CASE) tools.

Short Summary:

Analyzes user interfaces, maintain hardware and software performance tuning, analyze workload and computer usage, maintain interfaces with outside systems, analyze downtimes, analyze proposed system modifications, upgrades and new COTS. Defines the problem, and develops system requirements and program specifications, from which programmers prepare detailed flow charts, programs, and tests. Coordinates closely with programmers to ensure proper implementation of program and system specifications. Develops, in conjunction with functional users, system alternative solutions.

Duties, Tasks, and Responsibilities

Analyze information to determine, recommend, and plan computer specifications and layouts, and peripheral equipment modifications.

Analyze user needs and software requirements to determine approach and feasibility of design within time and cost constraints.

Confer with data processing and project managers to obtain information on limitations and capabilities for data processing projects.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with customers about software system design and maintenance.

Consult with engineering staff to evaluate interface between hardware and software, develop specifications and performance requirements and resolve customer problems.

Estimate software development costs and schedule.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Obtain and evaluate information on factors such as reporting formats required, costs, and security needs to determine hardware configuration.

Prepare reports and correspondence concerning project specifications, activities and status.

Review existing programs and assist in making refinements, reducing operating time, and improve current techniques.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Business Management and Administration

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Customer relationship management CRM software — ACT! software; Microsoft Dynamics CRM; Performance Solutions Technology ManagePro; Provisioning software

Enterprise resource planning ERP software — Microsoft Dynamics AX; Microsoft Dynamics NAV; Oracle E-Business Suite; Oracle JD Edwards OneWorld

Financial tracking software

Project Management software (Project, Primavera)

Tools

Desktop computers

High end computer servers — Application servers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Certification and Accreditation Certification Officer (CACO) - Full Performance

Skill Community: Security

Labor Group: Cyber Security

Job Classification: Contractor

Status: Active

Date Effective: 5/17/2012

Standard Occupational Code:
 [15-1122] Information Security Analysts
 [15-1122] Information Security Analysts

Long Summary:
• Certification and Accreditation Certification Officers (CACOs) advise and assist the Sponsor's customers with the Lifecycle Certification and Accreditation (C&A) process and developing a Systems Security Plan (SSP). They monitor and track projects in the Risk Assessment Division C&A test queue. CACOs read and analyze SSPs and develop an understanding of the customer systems and applications. They coordinate C&A actions and system testing with appropriate security personnel. They develop risk assessment, recommend mitigating countermeasures, and write short, succinct risk assessment and certification reports for submission to the Chief Information Officer and Executive Director.

Short Summary:
• Certification and Accreditation Certification Officers (CACOs) advise and assist the Sponsor's customers with the Lifecycle Certification and Accreditation (C&A) process and developing a Systems Security Plan (SSP).--

Duties, Tasks, and Responsibilities

Act as C&A project register, managing the C&A registration process.

Assemble and submit C&A packages to Principal Accreditation Authority/ Designated Accreditation Authority.

Coordinate C&A actions and system testing with appropriate security personnel.

Maintain a document repository where C&A project documentation is stored.

Monitor and track projects in the RAD C&A test queue.

Read and analyze SSPs and develop understanding of systems and applications.

Record/register IPC actions concerning project approvals to operate in the C&A database.

Work closely with Agency Information Systems (AIS) developers to identify the appropriate certification/approval processes and authorities.

Knowledge, Skills, and Abilities

Capability to quickly assimilate the concept of new applications and relate them to the overall Sponsor computing and communications environments.

Demonstrated ability to act independently when making technical and business judgments.

Good communications skills, written and oral.

Knowledge of risk management methodology.

Knowledge with managing document repositories in database and Lotus Notes.

Knowledge with the use of process tracking and document control software.

Strong technical skills and analytic ability.

Thorough knowledge of the Sponsor's standard project cycle.

Working knowledge of AR 11-12 Certification Testing of Agency TS/SCI Information Systems and Applications.

Working knowledge of Intelligence Community Information Assurance policies and regulations and how they relate to the certification and accreditation process.

Minimum Certifications

ISC2 CISSP

SANS GSEC

Minimum Experience

Experience with managing document repositories in database and Lotus Notes

Experience with the use of process tracking and document control software

Technology

Information Assurance assessment tools

Lotus Notes,

Microsoft Office

encryption technologies

identity and authentication technologies.

Tools

Computers

Work Environment

Work is primarily performed in an office environment and/or computer laboratory.

Supervision Received and Given

Received: Supervision is provided by the Government Task Manager.
Given: none

Chief Cyber Security Engineer/Architect - Expert

Skill Community: Security

Labor Group: Cyber Security

Job Classification: Contractor

Status: Active

Date Effective: 5/17/2012

Standard Occupational Code:

Long Summary:
The Chief Engineer/Architect is the main technical focal point of the Program/Project existing and future efforts. This person act as the primary Program/Project resource capturing and communicating the overall use of the various technologies and program capabilities and ensures all Network Defense capabilities are kept current and evolve to meet the demands of the changing threat landscape. The Chief Engineer/Architect participates in all technical meetings or discussions as deemed necessary by the COTR and/or designated Government Task Manager.

Short Summary:
The Chief Engineer/Architect is the main technical focal point that ensures Network Defense capabilities are kept current and evolve to meet the demands of the changing threat landscape.

Duties, Tasks, and Responsibilities

Based on the latest trends and technologies, ensures that the Sponsors cyber defense protections are adequate and effective and make recommendations on the way forward.

Ensure changes are made using an approval process agreed to in advance.

In coordination with staff management to ensure compliance with all applicable Agency, requirements for managing IT engineering projects.

Maintains system baselines and configuration management items, including security event monitoring "policies" in a manner determined and agreed to by the Sponsors Program/Project management.

The Chief Engineer/Architect may be called on to lead special projects or investigations into specific technology or solution issues and to shepherd research and piloting of new capabilities with project engineers and/or partner organizations as required.

Knowledge, Skills, and Abilities

Familiarity with System Development Lifecycle, Program Management, and process methodology related to governance, management, engineering, and operations with experience in supporting project activities at engineering and operations review boards.

Good interpersonal, organizational, writing, communications and briefing skills

Knowledge of and experience in configuration management controls and use.

Strong analytical and problem solving skills.

Minimum Education

A bachelor's degree in electrical engineering, computer engineering, computer science, or other closely related discipline. Master's degree and architect training preferred.

Minimum Experience

identity and authentication technologies

Technology

Information Assurance assessment tools

Lotus Notes

Microsoft Office

encryption technologies

identity and authentication technologies

Tools

Computers

Work Environment

Work is primarily performed in an office environment and/or computer laboratory

Supervision Received and Given

Received: from the COTR, Government Task Manager and contractor task manager.
Given: Depending on assignment, may serve as team lead or first line supervisor for assigned contractor staff

Circuit Design and Drawing - Developmental

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 5/31/2012

Standard Occupational Code:
 [17-2060] Computer Hardware Engineers
 [17-2061] Computer Hardware Engineers

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Architect, design, implement, and test circuits for high speed networking applications. Create signal processing filters which extract information from electrical currents and voltages.

Short Summary:

Architect, design, implement, and test circuits for high speed networking applications. Create signal processing filters which extract information from electrical currents and voltages.

Duties, Tasks, and Responsibilities

Architect, design, and implement test circuits for high speed networking applications.

Build inventories and maintain accurate information as it pertains to network components, circuits, routers, switches, racks, etc.

Develop, implement and maintain standardized procedures for adding, deleting, and modifying records of inventoried network elements.

Work extensively with IT and related teams in the deployment, stabilization, and ongoing operation of the systems.

Work with systems engineers to understand feature requirements, develop architectural approaches to problems

Knowledge, Skills, and Abilities

Ability to select components based on cost and space limitations

Debug end-to-end implementations across functional teams, and write release notes.

Excellent understanding of various network components.

Integrate hardware and software

Knowledge of component and transmission medium compatibility and interconnection.

Perform laboratory tests using specialized equipment

Perform signal integrity simulations

Test at subsystem level

Work with schematic capture tools

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Simulation software

Tools

Network Analyzer; Spectrum Analyzer; Power Meter

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Architect, design, implement, and test circuits for high speed networking applications. Create signal processing filters which extract information from electrical currents and voltages.

Short Summary:
Architect, design, implement, and test circuits for high speed networking applications. Create signal processing filters which extract information from electrical currents and voltages.

Duties, Tasks, and Responsibilities

Architect, design, and implement test circuits for high speed networking applications.

Build inventories and maintain accurate information as it pertains to network components, circuits, routers, switches, racks, etc.

Develop, implement and maintain standardized procedures for adding, deleting, and modifying records of inventoried network elements.

Work extensively with IT and related teams in the deployment, stabilization, and ongoing operation of the systems.

Work with systems engineers to understand feature requirements, develop architectural approaches to problems

Knowledge, Skills, and Abilities

Ability to select components based on cost and space limitations

Debug end-to-end implementations across functional teams, and write release notes.

Excellent understanding of various network components.

Integrate hardware and software

Knowledge of component and transmission medium compatibility and interconnection.

Perform laboratory tests using specialized equipment

Perform signal integrity simulations

Test at subsystem level

Work with schematic capture tools

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Simulation software

Tools

Network Analyzer; Spectrum Analyzer; Power Meter

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Communications Hardware Engineer - Developmental

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 5/31/2012

Standard Occupational Code:
 [17-2060] Computer Hardware Engineers
 [17-2061] Computer Hardware Engineers

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Leads all aspects of outside plant (OSP) installation, maintenance, locating fiber optic cable routes, and splicing. Develops preventive maintenance and restoration procedures for OSP facilities. Splices and tests fiber optic cable in a field environment. Reads and interprets Miss Utility tickets and compares to existing outside drawings. Communicates verbally with construction subcontractors regarding proper procedures for placement of outside cable plant. Interfaces with OSP engineers to determine best course of action for cable repairs or relocates. Provides functional guidance, supervision, technical support, training, and quality assurance/control to technicians.

Duties, Tasks, and Responsibilities

Add, delete, and modify; as required, host, terminal, and network devices.

Analyze and implement communications standards and protocols according to site requirements.

Analyze existing requirements and prepares specifications for hardware acquisitions.

Analyze network and computer communications hardware characteristics and recommends equipment procurement, removals, and modifications.

Assist and coordinate with communications network specialists in the area of communications software.

Conduct sites surveys; assess and document current site network configuration and user requirements.

Configure computers, communications devices and peripheral equipment.

Develop hardware installation schedules.

Install network hardware.

Prepare drawings documenting configuration changes at each site.

Prepare engineering plans and site installation Technical Design Packages.

Prepare reports and studies concerning hardware. Prepare functional requirements and specifications for hardware acquisitions. Ensure that problems have been properly identified and that the solutions will satisfy the user's requirements.

Prepare site installation and test reports.

Review computer systems in terms of machine capabilities and human-machine interface.

Train site personnel in proper use of hardware. Build specialized interconnecting cables.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Time Management — Managing one's own time and the time of others.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Analytical or scientific software — SAS software; The Mathworks MATLAB; Verification software; Xilinx Synthesis Technology XST

Computer aided design CAD software — Electronic design automation EDA software; Mathsoft Mathcad; Xilinx ISE Foundation; Xilinx ModelSim

Development environment software — C; Microsoft Visual Basic; SystemVerilog; Tool command language Tcl

Object or component oriented development software — C++; Microsoft Visual C# .NET; Practical extraction and reporting language Perl; SKILL

Operating system software — Computer diagnostic software; Linux; Shell script; Unix

Tools

Electronic measuring probes — Probe card devices; Probe stations

Integrated circuit testers — Digital analysis systems DAS; Logic analyzers; Logic probes

Low voltage alternating and direct current AC DC panelboards — Alternating current AC power sources; Direct current DC power supplies

Oscilloscopes — Communications signal analyzers; Sampling oscilloscopes

Signal generators — Function generators; Pattern generators; Universal source generators

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Time Management — Managing one's own time and the time of others.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Analytical or scientific software — SAS software; The Mathworks MATLAB; Verification software; Xilinx Synthesis Technology XST

Computer aided design CAD software — Electronic design automation EDA software; Mathsoft Mathcad; Xilinx ISE Foundation; Xilinx ModelSim

Development environment software — C; Microsoft Visual Basic; SystemVerilog; Tool command language Tcl

Object or component oriented development software — C++; Microsoft Visual C# .NET; Practical extraction and reporting language Perl; SKILL

Operating system software — Computer diagnostic software; Linux; Shell script; Unix

Tools

Electronic measuring probes — Probe card devices; Probe stations

Integrated circuit testers — Digital analysis systems DAS; Logic analyzers; Logic probes

Low voltage alternating and direct current AC DC panelboards — Alternating current AC power sources; Direct current DC power supplies

Oscilloscopes — Communications signal analyzers; Sampling oscilloscopes

Signal generators — Function generators; Pattern generators; Universal source generators

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Communications Hardware Engineer - Senior

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 5/31/2012

Standard Occupational Code:
[17-2060] Computer Hardware Engineers
[17-2061] Computer Hardware Engineers

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Leads all aspects of outside plant (OSP) installation, maintenance, locating fiber optic cable routes, and splicing. Develops preventive maintenance and restoration procedures for OSP facilities. Splices and tests fiber optic cable in a field environment. Reads and interprets Miss Utility tickets and compares to existing outside drawings. Communicates verbally with construction subcontractors regarding proper procedures for placement of outside cable plant. Interfaces with OSP engineers to determine best course of action for cable repairs or relocates. Provides functional guidance, supervision, technical support, training, and quality assurance/control to technicians.

Short Summary:

Leads all aspects of outside plant (OSP) installation, maintenance, locating fiber optic cable routes, and splicing. Develops preventive maintenance and restoration procedures for OSP facilities. Splices and tests fiber optic cable in a field environment. Reads and interprets Miss Utility tickets and compares to existing outside drawings. Communicates verbally with construction subcontractors regarding proper procedures for placement of outside cable plant. Interfaces with OSP engineers to determine best course of action for cable repairs or relocates. Provides functional guidance, supervision, technical support, training, and quality assurance/control to technicians.

Duties, Tasks, and Responsibilities

Add, delete, and modify; as required, host, terminal, and network devices.

Analyze and implement communications standards and protocols according to site requirements.

Analyze existing requirements and prepares specifications for hardware acquisitions.

Analyze network and computer communications hardware characteristics and recommends equipment procurement, removals, and modifications.

Assist and coordinate with communications network specialists in the area of communications software.

Conduct sites surveys; assess and document current site network configuration and user requirements.

Configure computers, communications devices and peripheral equipment.

Develop hardware installation schedules.

Install network hardware.

Prepare drawings documenting configuration changes at each site.

Prepare engineering plans and site installation Technical Design Packages.

Prepare reports and studies concerning hardware. Prepare functional requirements and specifications for hardware acquisitions. Ensure that problems have been properly identified and that the solutions will satisfy the user's requirements.

Prepare site installation and test reports.

Review computer systems in terms of machine capabilities and human-machine interface.

Train site personnel in proper use of hardware. Build specialized interconnecting cables.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Time Management — Managing one's own time and the time of others.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Analytical or scientific software — SAS software; The Mathworks MATLAB; Verification software; Xilinx Synthesis Technology XST

Computer aided design CAD software — Electronic design automation EDA software; Mathsoft Mathcad; Xilinx ISE Foundation; Xilinx ModelSim

Development environment software — C; Microsoft Visual Basic; SystemVerilog; Tool command language Tcl

Object or component oriented development software — C++; Microsoft Visual C# .NET; Practical extraction and reporting language Perl; SKILL

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Computer Engineer - Developmental

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:
[17-2060] Computer Hardware Engineers
[17-2061] Computer Hardware Engineers
[17-2060] Computer Hardware Engineers
[17-2061] Computer Hardware Engineers

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Computer Engineer Development perform a variety of engineering analysis, software, hardware, or network development, integration, testing, and maintenance tasks for purposes of integrating hardware and software products into environments or stand-alone networks. Positions identify and resolve moderately complex computer engineering problems; define, collect and implement computer engineering customer requirements for small to mid-scale, moderately complex projects; lead small product evaluations; and develop procedures for and perform moderately complex installation and configuration of hardware, software, or network products.

Short Summary:

Computer Engineer Development perform a variety of engineering analysis, software, hardware, or network development, integration, testing, and maintenance tasks for purposes of integrating hardware and software products into environments or stand-alone networks. Positions identify and resolve moderately complex computer engineering problems; define, collect and implement computer engineering customer requirements for small to mid-scale, moderately complex projects; lead small product evaluations; and develop procedures for and perform moderately complex installation and configuration of hardware, software, or network products.

Duties, Tasks, and Responsibilities

Leads small-sized product evaluations and assists in the planning of medium-sized product evaluations. ☐Coordinates with components throughout the Agency to ensure proper interpretation, integration, deployment, operational support, etc. ☐Prepares and provides briefings on product capabilities and/or project status.

Defines, collects, and implements computer engineering customer requirements for small to mid-size, moderately complex projects. Assists in defining requirements for large-scale, complex projects. ☐Leads discussions with customers to gather requirements on projects (e.g. may work with customer to build test environments for developmental purposes). ☐Participates in technical discussions on large-scale, complex problems. ☐Designs and develops engineering solutions to meet customer requirements (e.g. writing, maintaining, testing, integrating, and implementing software, hardware, and associated documentation). ☐Provides alternative design options to meet customer requirements.

Identifies and resolves a full range of moderately complex computer engineering problems. Assists in identification and resolution of increasingly complex problems. Receives, tracks and responds to problems reported by customers (e.g., troubleshoots collaboration software, operating systems, web services, and database problems). Communicates with customer to fully understand problem. Researches problems by accessing internal and external knowledge resources (vendor websites, internal engineering websites, and vendor documentation) and/or discussing with more experienced team members. Keeps team lead or first-line supervisor informed of problem resolution status. Begins to recognize and recommend alternative processes or long-term solutions to recurring problems.

Performs moderately complex installation, configuration and maintenance of software and hardware network products. Builds infrastructure. Develops procedures for installation of hardware, software, or network components

Knowledge, Skills, and Abilities

Ability to work both independently and in a team environment.

Basic knowledge of Project Management concepts and principles.

Communication skills (oral and written) demonstrated by expressing ideas, explanations, and concepts in a manner appropriate for the audience (one-on-one, small groups, etc.) using a variety of formats (email instant messaging, briefing, consulting, etc.).

Customer service skills demonstrated by anticipating and responding to customers' needs in a manner that provides added value and generates customer satisfaction.

Demonstrated ability to interpret and convey technical concepts in an easily understood manner, both verbally and in writing.

Demonstrated ability to learn new technologies quickly and stay current on tools, methodologies, technologies and programming language features.

Strong analytical and problem-solving skills.

Working knowledge of hardware components (network cards, memory, hard drives, etc.).

Working knowledge of network components (routers, switches, etc.).

Working knowledge of software products (operating systems, applications, device drivers, etc.).

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Data base user interface and query software — Database software; Microsoft Access

MS Office Suite

Markup language – HTML

Metric Tool

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Ability to work both independently and in a team environment.

Basic knowledge of Project Management concepts and principles.

Communication skills (oral and written) demonstrated by expressing ideas, explanations, and concepts in a manner appropriate for the audience (one-on-one, small groups, etc.) using a variety of formats (email instant messaging, briefing, consulting, etc.).

Customer service skills demonstrated by anticipating and responding to customers' needs in a manner that provides added value and generates customer satisfaction.

Demonstrated ability to interpret and convey technical concepts in an easily understood manner, both verbally and in writing.

Demonstrated ability to learn new technologies quickly and stay current on tools, methodologies, technologies and programming language features.

Strong analytical and problem-solving skills.

Working knowledge of hardware components (network cards, memory, hard drives, etc.).

Working knowledge of network components (routers, switches, etc.).

Working knowledge of software products (operating systems, applications, device drivers, etc.).

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Computer Engineer - Full Performance

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:
[17-2060] Computer Hardware Engineers
[17-2061] Computer Hardware Engineers

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Computer Engineer Development perform a variety of engineering analysis, software, hardware, or network development, integration, testing, and maintenance tasks for purposes of integrating hardware and software products into environments or stand-alone networks. Positions identify and resolve moderately complex computer engineering problems; define, collect and implement computer engineering customer requirements for small to mid-scale, moderately complex projects; lead small product evaluations; and develop procedures for and perform moderately complex installation and configuration of hardware, software, or network products.

Short Summary:

Computer Engineer Development perform a variety of engineering analysis, software, hardware, or network development, integration, testing, and maintenance tasks for purposes of integrating hardware and software products into environments or stand-alone networks. Positions identify and resolve moderately complex computer engineering problems; define, collect and implement computer engineering customer requirements for small to mid-scale, moderately complex projects; lead small product evaluations; and develop procedures for and perform moderately complex installation and configuration of hardware, software, or network products.

Duties, Tasks, and Responsibilities

 Leads small-sized product evaluations and assists in the planning of medium-sized product evaluations. �processCoordinates with components throughout the Agency to ensure proper interpretation, integration, deployment, operational support, etc. ꢀPrepares and provides briefings on product capabilities and/or project status.

Defines, collects, and implements computer engineering customer requirements for small to mid-size, moderately complex projects. Assists in defining requirements for large-scale, complex projects. ꢀLeads discussions with customers to gather requirements on projects (e.g. may work with customer to build test environments for developmental purposes). ꢀParticipates in technical discussions on large-scale, complex problems. ꢀDesigns and develops engineering solutions to meet customer requirements (e.g. writing, maintaining, testing, integrating, and implementing software, hardware, and associated documentation). ꢀProvides alternative design options to meet customer requirements.

Identifies and resolves a full range of moderately complex computer engineering problems. Assists in identification and resolution of increasingly complex problems. Receives, tracks and responds to problems reported by customers (e.g., troubleshoots collaboration software, operating systems, web services, and database problems). Communicates with customer to fully understand problem. Researches problems by accessing internal and external knowledge resources (vendor websites, internal engineering websites, and vendor documentation) and/or discussing with more experienced team members. Keeps team lead or first-line supervisor informed of problem resolution status. Begins to recognize and recommend alternative processes or long-term solutions to recurring problems.

Performs moderately complex installation, configuration and maintenance of software and hardware network products. Builds infrastructure. Develops procedures for installation of hardware, software, or network components

Knowledge, Skills, and Abilities

Ability to work both independently and in a team environment.

Basic knowledge of Project Management concepts and principles.

Communication skills (oral and written) demonstrated by expressing ideas, explanations, and concepts in a manner appropriate for the audience (one-on-one, small groups, etc.) using a variety of formats (email instant messaging, briefing, consulting, etc.).

Customer service skills demonstrated by anticipating and responding to customers' needs in a manner that provides added value and generates customer satisfaction.

Demonstrated ability to interpret and convey technical concepts in an easily understood manner, both verbally and in writing.

Demonstrated ability to learn new technologies quickly and stay current on tools, methodologies, technologies and programming language features.

Strong analytical and problem-solving skills.

Working knowledge of hardware components (network cards, memory, hard drives, etc.).

Working knowledge of network components (routers, switches, etc.).

Working knowledge of software products (operating systems, applications, device drivers, etc.).

Minimum Education

[17-2060] Computer Hardware Engineers
[17-2061] Computer Hardware Engineers

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Research, design, develop, and test computer or computer-related equipment for commercial, industrial, military, or scientific use. May supervise the manufacturing and installation of computer or computer-related equipment and components. Exclude "Computer Software Engineers, Applications" and "Computer Software Engineers, Systems Software". Hardware refers to computer chips, circuit boards, computer systems, and related equipment such as keyboards, modems, and printers.

Short Summary:
Research, design, develop, and test computer or computer-related equipment for commercial, industrial, military, or scientific use. May supervise the manufacturing and installation of computer or computer-related equipment and components. Exclude "Computer Software Engineers, Applications" and "Computer Software Engineers, Systems Software". Hardware refers to computer chips, circuit boards, computer systems, and related equipment such as keyboards, modems, and printers.

Duties, Tasks, and Responsibilities

Analyze information to determine, recommend, and plan layout, including type of computers and peripheral equipment modifications.

Analyze user needs and recommend appropriate hardware.

Assemble and modify existing pieces of equipment to meet special needs.

Build, test and modify product prototypes, using working models or theoretical models constructed using computer simulation.

Confer with engineering staff and consult specifications to evaluate interface between hardware and software and operational and performance requirements of overall system.

Design and develop computer hardware and support peripherals, including central processing units (CPUs), support logic, microprocessors, custom integrated circuits, and printers and disk drives.

Direct technicians, engineering designers or other technical support personnel as needed.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Monitor functioning of equipment and make necessary modifications to ensure system operates in conformance with specifications.

Provide technical support to designers, marketing and sales departments, suppliers, engineers and other team members throughout the product development and implementation process.

Provide training and support to system designers and users.

Recommend purchase of equipment to control dust, temperature, and humidity in area of system installation.

Select hardware and material, assuring compliance with specifications and product requirements.

Specify power supply requirements and configuration, drawing on system performance expectations and design specifications.

Store, retrieve, and manipulate data for analysis of system capabilities and requirements.

Test and verify hardware and support peripherals to ensure that they meet specifications and requirements, analyzing and recording test data.

Update knowledge and skills to keep up with rapid advancements in computer technology.

Write detailed functional specifications that document the hardware development process and support hardware introduction.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Time Management — Managing one's own time and the time of others.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Analytical or scientific software — SAS software; The Mathworks MATLAB; Verification software; Xilinx Synthesis Technology XST

Computer aided design CAD software — Electronic design automation EDA software; Mathsoft Mathcad; Xilinx ISE Foundation; Xilinx ModelSim

Development environment software — C; Microsoft Visual Basic; SystemVerilog; Tool command language Tcl

Object or component oriented development software — C++; Microsoft Visual C# .NET; Practical extraction and reporting language Perl; SKILL

Operating system software — Computer diagnostic software; Linux; Shell script; Unix

Tools

Electronic measuring probes — Probe card devices; Probe stations

Integrated circuit testers — Digital analysis systems DAS; Logic analyzers; Logic probes

Low voltage alternating and direct current AC DC panelboards — Alternating current AC power sources; Direct current DC power supplies

Oscilloscopes — Communications signal analyzers; Sampling oscilloscopes

Signal generators — Function generators; Pattern generators; Universal source generators

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Computer Hardware Engineer - Expert

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:
[17-2060] Computer Hardware Engineers
[17-2061] Computer Hardware Engineers

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Research, design, develop, and test computer or computer-related equipment for commercial, industrial, military, or scientific use. May supervise the manufacturing and installation of computer or computer-related equipment and components. Exclude "Computer Software Engineers, Applications" and "Computer Software Engineers, Systems Software". Hardware refers to computer chips, circuit boards, computer systems, and related equipment such as keyboards, modems, and printers.

Short Summary:
Research, design, develop, and test computer or computer-related equipment for commercial, industrial, military, or scientific use. May supervise the manufacturing and installation of computer or computer-related equipment and components. Exclude "Computer Software Engineers, Applications" and "Computer Software Engineers, Systems Software". Hardware refers to computer chips, circuit boards, computer systems, and related equipment such as keyboards, modems, and printers.

Duties, Tasks, and Responsibilities

Analyze information to determine, recommend, and plan layout, including type of computers and peripheral equipment modifications.

Analyze user needs and recommend appropriate hardware.

Assemble and modify existing pieces of equipment to meet special needs.

Build, test and modify product prototypes, using working models or theoretical models constructed using computer simulation.

Confer with engineering staff and consult specifications to evaluate interface between hardware and software and operational and performance requirements of overall system.

Design and develop computer hardware and support peripherals, including central processing units (CPUs), support logic, microprocessors, custom integrated circuits, and printers and disk drives.

Direct technicians, engineering designers or other technical support personnel as needed.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Monitor functioning of equipment and make necessary modifications to ensure system operates in conformance with specifications.

Provide technical support to designers, marketing and sales departments, suppliers, engineers and other team members throughout the product development and implementation process.

Provide training and support to system designers and users.

Recommend purchase of equipment to control dust, temperature, and humidity in area of system installation.

Select hardware and material, assuring compliance with specifications and product requirements.

Specify power supply requirements and configuration, drawing on system performance expectations and design specifications.

Store, retrieve, and manipulate data for analysis of system capabilities and requirements.

Test and verify hardware and support peripherals to ensure that they meet specifications and requirements, analyzing and recording test data.

Update knowledge and skills to keep up with rapid advancements in computer technology.

Write detailed functional specifications that document the hardware development process and support hardware introduction.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Time Management — Managing one's own time and the time of others.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.

• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Analytical or scientific software — SAS software; The Mathworks MATLAB; Verification software; Xilinx Synthesis Technology XST

Computer aided design CAD software — Electronic design automation EDA software; Mathsoft Mathcad; Xilinx ISE Foundation; Xilinx ModelSim

Development environment software — C; Microsoft Visual Basic; SystemVerilog; Tool command language Tcl

Object or component oriented development software — C++; Microsoft Visual C# .NET; Practical extraction and reporting language Perl; SKILL

Operating system software — Computer diagnostic software; Linux; Shell script; Unix

Tools

Electronic measuring probes — Probe card devices; Probe stations

Integrated circuit testers — Digital analysis systems DAS; Logic analyzers; Logic probes

Low voltage alternating and direct current AC DC panelboards — Alternating current AC power sources; Direct current DC power supplies

Oscilloscopes — Communications signal analyzers; Sampling oscilloscopes

Signal generators — Function generators; Pattern generators; Universal source generators

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Computer Hardware Engineer - Full Performance

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Time Management — Managing one's own time and the time of others.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Time Management — Managing one's own time and the time of others.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Analytical or scientific software — SAS software; The Mathworks MATLAB; Verification software; Xilinx Synthesis Technology XST

Computer aided design CAD software — Electronic design automation EDA software; Mathsoft Mathcad; Xilinx ISE Foundation; Xilinx ModelSim

Development environment software — C; Microsoft Visual Basic; SystemVerilog; Tool command language Tcl

Object or component oriented development software — C++; Microsoft Visual C# .NET; Practical extraction and reporting language Perl; SKILL

Operating system software — Computer diagnostic software; Linux; Shell script; Unix

Tools

Electronic measuring probes — Probe card devices; Probe stations

Integrated circuit testers — Digital analysis systems DAS; Logic analyzers; Logic probes

Low voltage alternating and direct current AC DC panelboards — Alternating current AC power sources; Direct current DC power supplies

Oscilloscopes — Communications signal analyzers; Sampling oscilloscopes

Signal generators — Function generators; Pattern generators; Universal source generators

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Hardware refers to computer chips, circuit boards, computer systems, and related equipment such as keyboards, modems, and printers.

Short Summary:

Research, design, develop, and test computer or computer-related equipment for commercial, industrial, military, or scientific use. May supervise the manufacturing and installation of computer or computer-related equipment and components. Exclude "Computer Software Engineers, Applications" and "Computer Software Engineers, Systems Software". Hardware refers to computer chips, circuit boards, computer systems, and related equipment such as keyboards, modems, and printers.

Duties, Tasks, and Responsibilities

Analyze information to determine, recommend, and plan layout, including type of computers and peripheral equipment modifications.

Analyze user needs and recommend appropriate hardware.

Assemble and modify existing pieces of equipment to meet special needs.

Build, test and modify product prototypes, using working models or theoretical models constructed using computer simulation.

Confer with engineering staff and consult specifications to evaluate interface between hardware and software and operational and performance requirements of overall system.

Design and develop computer hardware and support peripherals, including central processing units (CPUs), support logic, microprocessors, custom integrated circuits, and printers and disk drives.

Direct technicians, engineering designers or other technical support personnel as needed.

Evaluate factors such as reporting formats required, cost constraints, and need for security restrictions to determine hardware configuration.

Monitor functioning of equipment and make necessary modifications to ensure system operates in conformance with specifications.

Provide technical support to designers, marketing and sales departments, suppliers, engineers and other team members throughout the product development and implementation process.

Provide training and support to system designers and users.

Recommend purchase of equipment to control dust, temperature, and humidity in area of system installation.

Select hardware and material, assuring compliance with specifications and product requirements.

Specify power supply requirements and configuration, drawing on system performance expectations and design specifications.

Store, retrieve, and manipulate data for analysis of system capabilities and requirements.

Test and verify hardware and support peripherals to ensure that they meet specifications and requirements, analyzing and recording test data.

Update knowledge and skills to keep up with rapid advancements in computer technology.

Write detailed functional specifications that document the hardware development process and support hardware introduction.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Time Management — Managing one's own time and the time of others.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Analytical or scientific software — SAS software; The Mathworks MATLAB; Verification software; Xilinx Synthesis Technology XST

Computer aided design CAD software — Electronic design automation EDA software; Mathsoft Mathcad; Xilinx ISE Foundation; Xilinx ModelSim

Development environment software — C; Microsoft Visual Basic; SystemVerilog; Tool command language Tcl

Object or component oriented development software — C++; Microsoft Visual C# .NET; Practical extraction and reporting language Perl; SKILL

Operating system software — Computer diagnostic software; Linux; Shell script; Unix

Tools

Electronic measuring probes — Probe card devices; Probe stations

Integrated circuit testers — Digital analysis systems DAS; Logic analyzers; Logic probes

Low voltage alternating and direct current AC DC panelboards — Alternating current AC power sources; Direct current DC power supplies

Oscilloscopes — Communications signal analyzers; Sampling oscilloscopes

Signal generators — Function generators; Pattern generators; Universal source generators

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Computer Hardware Engineer - Subject Matter Expert

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:
[17-2060] Computer Hardware Engineers
[17-2061] Computer Hardware Engineers

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Research, design, develop, and test computer or computer-related equipment for commercial, industrial, military, or scientific use. May supervise the manufacturing and installation of computer or computer-related equipment and components. Exclude "Computer Software Engineers, Applications" and "Computer Software Engineers, Systems Software". Hardware refers to computer chips, circuit boards, computer systems, and related equipment such as keyboards, modems, and printers.

• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Analytical or scientific software — SAS software; The Mathworks MATLAB; Verification software; Xilinx Synthesis Technology XST

Computer aided design CAD software — Electronic design automation EDA software; Mathsoft Mathcad; Xilinx ISE Foundation; Xilinx ModelSim

Computing Services Manager - Developmental

Skill Community: Enterprise IT

Labor Group: Computing Services

Job Classification: Contractor

Status: Active

Date Effective: 10/3/2012

Standard Occupational Code:
 [11-3021] Computer and Information Systems Managers

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. This is managerial work in the Chief Information Officer (CIO) Mission Support Office, Computing Services occupational specialty. In coordination with senior management, positions develop the strategic direction and execute program or service resources, plan and implement operations and services, and are accountable for program outcomes including corporate interests. Specifically, they are responsible for management of the design, development, operation, and maintenance of large scale (wide) 24X7 computing infrastructure to include enterprise and departmental servers, disk and tape storage devices, operating system and utility software, and data center planning and environmentals. Positions lead key projects and are responsible for managing large teams of contractors in the daily operations of the's computing infrastructure. Positions also provide advice and guidance to Senior and Executive Management on a broad range of CIO/Computing Services issues and represent the organization as a member of various internal and external boards. Positions at this level have demonstrated competency in leadership, supervision, resource management, and a comprehensive understanding of the organization's mission and customer needs. Based on assignment, incumbents oversee and manage contracting activities associated to Contracting Officer's Technical Representative responsibilities; ensures coordination with the contacting officer.

Short Summary:

This is work in the Chief Information Officer (CIO) Mission Support Office, Computing Services occupational specialty. In coordination with senior management, positions develop the strategic direction and execute program or service resources, plan and implement operations and services, and are accountable for program outcomes including corporate interests. Specifically, they are responsible for management of the design, development, operation, and maintenance of large scale (wide) 24X7 computing infrastructure to include enterprise and departmental servers, disk and tape storage devices, operating system and utility software, and data center planning and environmentals. Positions lead key projects and are responsible for managing large teams of contractors in the daily operations of the's computing infrastructure. Positions also provide advice and guidance to Senior and Executive Management on a broad range of CIO/Computing Services issues and represent the organization as a member of various internal and external boards. Positions at this level have demonstrated competency in leadership, supervision, resource management, and a comprehensive understanding of the organization's mission and customer needs. Based on assignment, incumbents oversee and manage contracting activities associated to Contracting Officer's Technical Representative responsibilities; ensures coordination with the contacting officer.

Duties, Tasks, and Responsibilities

  Advises executive managers/customers on issues, impacts, risks, options and implications of key policy

decisions.

Advises management and customers on how to implement policies and procedures

Assigns work to subordinates including other Managers and/or Senior Project Managers

Coordinates on staff resource decisions to meet corporate strategic goals.

Depending on assignment may play an active role in recruiting, external hiring, and selection for the component.

Determines appropriate performance metrics for the organization and effectively communicates them to subordinates.

Develops strategic alliances with key contacts and senior-level officials.

Develops strategies to increase awareness of CIO business practices and advocates them throughout the organization

Directs the work of subordinates including other Managers and/or Senior Project Managers to ensure that Computing Services work is performed in an accurate and timely fashion.

Ensures Security, Safety, and Counter-Intelligence regulations, policies and procedures are followed.

Ensures daily Computing Services activities and projects are accurately carried out.

Evaluates the performance and skills of subordinates and provides performance and developmental feedback on an ongoing basis.

Incorporates and manages diversity in the workplace

Incorporates "best management practices" in the workplace.

Manages and provides direction and guidance to staff or contractors in the design, development, operation, and maintenance of large scale (wide) 24X7 computing infrastructure to include enterprise and departmental servers, disk and tape storage devices, operating system and utility software, and data center planning and environmental

Manages operations and resources within Computing Services components.
Develops goals/objectives for CIO programs

Manages the establishment of performance objectives and standards; assists subordinates including other Managers and/or Senior Project Managers in setting individual goals.

Participates in personnel selection and assignment process.

Provides advice and guidance to Senior and Executive Management on a broad range of CIO issues related to Computing Services

Provides broad technical advice and guidance on CIO processes, resources, policy interpretation, workflow, and Directorate/MSO priorities

Represents the organization as a member of various internal and external boards, task forces and working groups relevant to CIO's mission in the area of Computing Services. Provides advice and guidance on organization-wide and -wide CIO plans, policies, and regulations, and reviews the adequacy of resources available to organization/CIO programs.

Reviews, advises on and approves plans and concepts for new business and technologies

Serves as an Agent for Change in the component and CIO; manages the successful and smooth transition from current to desired culture, practices, structure and overall organizational environment as defined by senior leaders.

Sets own career development objectives and continuously improves own level of substantive competence. Maintains relevant certifications

Supports budget formulation activities; defends and executes organization's budgets in accordance with established regulations and procedures. Monitors resources on a regular basis to ensure activities remain within budget.

Knowledge, Skills, and Abilities

Ability to address training and career development needs of individuals, teams or organization to achieve strategic organizational objectives.

Ability to anticipate the changing demands for skills and plans to meet the future demands.

Ability to anticipate, effectively identifies, and expediently resolve complex problems.

Ability to be an agent for change, demonstrated by building commitment and allocating resources to make change happen; leading the definition of organizational vision and mission; designing processes, structures, reporting relationships, roles and responsibilities to support change; designing or participating in the design of a transition strategy and communications campaign for change; implementing a strategy for change

Ability to build a business case for a new technology, project or application related to Computing Services with complete funding profile including return on investment analysis.

Ability to effectively define and communicate organizational vision, objectives, initiatives and issues; inspire and motivate others to share vision and work toward its achievement; and collaborate with others to achieve outstanding performance, especially in difficult circumstances and major transitions.

Ability to effectively delegate, coordinate, motivate, and evaluate contract staff to achieve results.

Ability to evaluate and recommend process improvements and new and emerging technologies to meet customer requirements and emerging mission needs.

Ability to influence strategic or high impact decisions within and outside CIO using effective negotiation skills to address difficult issues with Senior and Executive Managers.

Ability to manage relationships among contractors, customers, and government technical workers demonstrated by fostering a climate conducive to positive working relationships; staying informed on major developments; coaching others in the value, issues and methods of good customer, contractor, and government technical worker relationships.

Ability to plan, set goals and determine strategies for accomplishing results; ability to monitor and evaluate progress toward goals.

Ability to work effectively with teams; demonstrated by fostering a collaborative work environment across the organization; understanding the dynamics and differences in roles to motivate and build team cohesiveness; encouraging information sharing, constructive feedback and cooperation from others; coaching team leaders on issues, problems and solutions options; and demonstrating leadership in cross-functional team initiatives.

Demonstrated ability to manage competing priorities and work requirements by continuously evaluating the needs of the organization's mission against ongoing work.

Demonstrated knowledge of approaches, tools and techniques for justifying a project, equipment or contract staffing expenditures; identifying cost, benefits and associated risks.

Effective leadership and management skills, gained through previous assignments in formal and informal leadership roles.

Highly effective communication skills (oral and written) demonstrated by expressing ideas, explanations and concepts in a manner appropriate for the audience (one-on-one, small groups, open forums, etc.) using a variety of formats (E-mail, briefings, memoranda, etc.).

Highly effective customer service skills, demonstrated by the ability to anticipate, analyze and respond to customer requirements in a manner that provides added value and generates customer satisfaction, even in situations in which the outcome is not what the customer desired.

Highly effective interpersonal skills, demonstrated by building relationships and networks within the Intelligence Community, the , and with subordinates.

Program leadership skills, demonstrated by providing strategic project management consulting; creating and implementing a strategy for supporting current and future business needs of organization; review and approve final strategic plans with customer; develop long-term strategies to deliver services that keep pace with technology trends.

Technical knowledge appropriate to the assignment:
- Significant knowledge of system management tools, software and processes; and associated platform, hardware and software technologies gained from previous assignments managing a centralized server operation and/or IT infrastructure organization.
- Thorough understanding of CIO services with particular depth in the area of Computing Services environment.

Thorough knowledge and ability to adhere to and ensure compliance with all Security and Safety standards, Counter-Intelligence policies and procedures.

Working knowledge of Resource Management policies and procedures gained from previous experience with Contracting, Procurement, Budgeting, Finance and/or Project Management.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Tools

Desktop Computers

Work Environment

Work is primarily performed in an office environment. Positions may require occasional travel throughout the Washington Metropolitan Area and domestic or foreign TDY travel.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Computing Services Manager - Expert

Skill Community: Enterprise IT

Labor Group: Computing Services

Job Classification: Contractor

Status: Active

Date Effective: 7/2/2012

Standard Occupational Code:

Long Summary:

Knowledge, Skills, and Abilities

Ability to address training and career development needs of individuals, teams or organization to achieve strategic organizational objectives.

Ability to anticipate the changing demands for skills and plans to meet the future demands.

Ability to anticipate, effectively identifies, and expediently resolve complex problems.

Ability to be an agent for change, demonstrated by building commitment and allocating resources to make change happen; leading the definition of organizational vision and mission; designing processes, structures, reporting relationships, roles and responsibilities to support change; designing or participating in the design of a transition strategy and communications campaign for change; implementing a strategy for change

Ability to build a business case for a new technology, project or application related to Computing Services with complete funding profile including return on investment analysis.

Ability to effectively define and communicate organizational vision, objectives, initiatives and issues; inspire and motivate others to share vision and work toward its achievement; and collaborate with others to achieve outstanding performance, especially in difficult circumstances and major transitions.

Ability to effectively delegate, coordinate, motivate, and evaluate contract staff to achieve results.

Ability to evaluate and recommend process improvements and new and emerging technologies to meet customer requirements and emerging mission needs.

Ability to influence strategic or high impact decisions within and outside CIO using effective negotiation skills to address difficult issues with Senior and Executive Managers.

Ability to manage relationships among contractors, customers, and government technical workers demonstrated by fostering a climate conducive to positive working relationships; staying informed on major developments; coaching others in the value, issues and methods of good customer, contractor, and government technical worker relationships.

Ability to plan, set goals and determine strategies for accomplishing results; ability to monitor and evaluate progress toward goals.

Ability to work effectively with teams; demonstrated by fostering a collaborative work environment across the organization; understanding the dynamics and differences in roles to motivate and build team cohesiveness; encouraging information sharing, constructive feedback and cooperation from others; coaching team leaders on issues, problems and solutions options; and demonstrating leadership in cross-functional team initiatives.

Demonstrated ability to manage competing priorities and work requirements by continuously evaluating the needs of the organization's mission against ongoing work.

Demonstrated knowledge of approaches, tools and techniques for justifying a project, equipment or contract staffing expenditures; identifying cost, benefits and associated risks.

Effective leadership and management skills, gained through previous assignments in formal and informal leadership roles.

Highly effective communication skills (oral and written) demonstrated by expressing ideas, explanations and concepts in a manner appropriate for the audience (one-on-one, small groups, open forums, etc.) using a variety of formats (E-mail, briefings, memoranda, etc.).

Highly effective customer service skills, demonstrated by the ability to anticipate, analyze and respond to customer requirements in a manner that provides added value and generates customer satisfaction, even in situations in which the outcome is not what the customer desired.

Highly effective interpersonal skills, demonstrated by building relationships and networks within the Intelligence Community, the , and with subordinates.

Program leadership skills, demonstrated by providing strategic project management consulting; creating and implementing a strategy for supporting current and future business needs of organization; review and approve final strategic plans with customer; develop long-term strategies to deliver services that keep pace with technology trends.

Technical knowledge appropriate to the assignment:
o Significant knowledge of system management tools, software and processes; and associated platform, hardware and software technologies gained from previous assignments managing a centralized server operation and/or IT infrastructure organization.
o Thorough understanding of CIO services with particular depth in the area of Computing Services environment.

Thorough knowledge and ability to adhere to and ensure compliance with all Security and Safety standards, Counter-Intelligence policies and procedures.

Working knowledge of Resource Management policies and procedures gained from previous experience with Contracting, Procurement, Budgeting, Finance and/or Project Management.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Work Environment

Work is primarily performed in an office environment. Positions may require occasional travel throughout the Washington Metropolitan Area and domestic or foreign TDY travel.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Computing Services Manager - Full Performance

Skill Community: Enterprise IT

Labor Group: Computing Services

Job Classification: Contractor

Status: Active

Date Effective: 7/2/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. This is work in the Chief Information Officer (CIO) Mission Support Office, Computing Services occupational specialty. In coordination with senior management, positions develop the strategic direction and execute program or service resources, plan and implement operations and services, and are accountable for program outcomes including corporate interests. Specifically, they are responsible for management of the design, development, operation, and maintenance of large scale (wide) 24X7 computing infrastructure to include enterprise and departmental servers, disk and tape storage devices, operating system and utility software, and data center planning and environmentals. Positions lead key projects and are responsible for managing large teams of contractors in the daily operations of the's computing infrastructure. Positions also provide advice and guidance to Senior and Executive Management on a broad range of CIO/Computing Services issues and represent the organization as a member of various internal and external boards. Positions at this level have demonstrated competency in leadership, supervision, resource management, and a comprehensive understanding of the organization's mission and customer needs. Based on assignment, incumbents oversee and manage contracting activities associated to Contracting Officer's Technical Representative responsibilities; ensures coordination with the contacting officer.

Duties, Tasks, and Responsibilities

Advises executive managers/customers on issues, impacts, risks, options and implications of key policy decisions.

Advises management and customers on how to implement policies and procedures

Assigns work to subordinates including other Managers and/or Senior Project Managers

Coordinates on staff resource decisions to meet corporate strategic goals

Depending on assignment may play an active role in recruiting, external hiring, and selection for the component

Determines appropriate performance metrics for the organization and effectively communicates them to subordinates.

Develops strategic alliances with key contacts and senior-level officials.

Develops strategies to increase awareness of CIO business practices and advocates them throughout the organization.

Directs the work of subordinates including other Managers and/or Senior Project Managers to ensure that Computing Services work is performed in an accurate and timely fashion.

Ensures Security, Safety, and Counter-Intelligence regulations, policies and procedures are followed.

Ensures daily Computing Services activities and projects are accurately carried out.

Evaluates the performance and skills of subordinates and provides performance and developmental feedback on an ongoing basis.

Incorporates and manages diversity in the workplace

Incorporates "best management practices" in the workplace

Manages and provides direction and guidance to staff or contractors in the design, development, operation, and maintenance of large scale (wide) 24X7 computing infrastructure to include enterprise and departmental servers, disk and tape storage devices, operating system and utility software, and data center planning and environmental.

Manages operations and resources within Computing Services components.
Develops goals/objectives for CIO programs.

Manages the establishment of performance objectives and standards; assists subordinates including other Managers and/or Senior Project Managers in setting individual goals.

Participates in personnel selection and assignment process.

Provides advice and guidance to Senior and Executive Management on a broad range of CIO issues related to Computing Services.

Provides broad technical advice and guidance on CIO processes, resources, policy interpretation, workflow, and Directorate/MSO priorities

Represents the organization as a member of various internal and external boards, task forces and working groups relevant to CIO's mission in the area of Computing Services. Provides advice and guidance on organization-wide and -wide CIO plans, policies, and regulations, and reviews the adequacy of resources available to organization/CIO programs.

Reviews, advises on and approves plans and concepts for new business and technologies.

Serves as an Agent for Change in the component and CIO; manages the successful and smooth transition from current to desired culture, practices, structure and overall organizational environment as defined by senior leaders.

Sets own career development objectives and continuously improves own level of substantive competence. Maintains relevant certifications.

Supports budget formulation activities; defends and executes organization's budgets in accordance with established regulations and procedures. Monitors resources on a regular basis to ensure activities remain within budget.

Knowledge, Skills, and Abilities

Ability to address training and career development needs of individuals, teams or organization to achieve strategic organizational objectives.

Ability to anticipate the changing demands for skills and plans to meet the future demands.

Ability to anticipate, effectively identifies, and expediently resolve complex problems.

Ability to be an agent for change, demonstrated by building commitment and allocating resources to make change happen; leading the definition of organizational vision and mission; designing processes, structures, reporting relationships, roles and responsibilities to support change; designing or participating in the design of a transition strategy and communications campaign for change; implementing a strategy for change

Ability to build a business case for a new technology, project or application related to Computing Services with complete funding profile including return on investment analysis.

Ability to effectively define and communicate organizational vision, objectives, initiatives and issues; inspire and motivate others to share vision and work toward its achievement; and collaborate with others to achieve outstanding performance, especially in difficult circumstances and major transitions.

Ability to effectively delegate, coordinate, motivate, and evaluate contract staff to achieve results.

Ability to evaluate and recommend process improvements and new and emerging technologies to meet customer requirements and emerging mission needs.

Ability to influence strategic or high impact decisions within and outside CIO using effective negotiation skills to address difficult issues with Senior and Executive Managers.

Ability to manage relationships among contractors, customers, and government technical workers demonstrated by fostering a climate conducive to positive working relationships; staying informed on major developments; coaching others in the value, issues and methods of good customer, contractor, and government technical worker relationships.

Ability to plan, set goals and determine strategies for accomplishing results; ability to monitor and evaluate progress toward goals.

Ability to plan, set goals and determine strategies for accomplishing results; ability to monitor and evaluate progress toward goals.

Ability to work effectively with teams; demonstrated by fostering a collaborative work environment across the organization; understanding the dynamics and differences in roles to motivate and build team cohesiveness; encouraging information sharing, constructive feedback and cooperation from others; coaching team leaders on issues, problems and solutions options; and demonstrating leadership in cross-functional team initiatives.

Demonstrated ability to manage competing priorities and work requirements by continuously evaluating the needs of the organization's mission against ongoing work.

Demonstrated knowledge of approaches, tools and techniques for justifying a project, equipment or contract staffing expenditures; identifying cost, benefits and associated risks.

Effective leadership and management skills, gained through previous assignments in formal and informal leadership roles.

Highly effective communication skills (oral and written) demonstrated by expressing ideas, explanations and concepts in a manner appropriate for the audience (one-on-one, small groups, open forums, etc.) using a variety of formats (E-mail, briefings, memoranda, etc.).

Highly effective customer service skills, demonstrated by the ability to anticipate, analyze and respond to customer requirements in a manner that provides added value and generates customer satisfaction, even in situations in which the outcome is not what the customer desired.

Highly effective interpersonal skills, demonstrated by building relationships and networks within the Intelligence Community, the , and with subordinates.

Program leadership skills, demonstrated by providing strategic project management consulting; creating and implementing a strategy for supporting current and future business needs of organization; review and approve final strategic plans with customer; develop long-term strategies to deliver services that keep pace with technology trends.

Technical knowledge appropriate to the assignment:
- Significant knowledge of system management tools, software and processes; and associated platform, hardware and software technologies gained from previous assignments managing a centralized server operation and/or IT infrastructure organization.
- Thorough understanding of CIO services with particular depth in the area of Computing Services environment.

Thorough knowledge and ability to adhere to and ensure compliance with all Security and Safety standards, Counter-Intelligence policies and procedures.

Working knowledge of Resource Management policies and procedures gained from previous experience with Contracting, Procurement, Budgeting, Finance and/or Project Management.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Tools

Desktop Computers

Work Environment

Work is primarily performed in an office environment. Positions may require occasional travel throughout the Washington Metropolitan Area and domestic or foreign TDY travel.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Computing Services Manager - Subject Matter Expert

Skill Community: Enterprise IT

Labor Group: Computing Services

Job Classification: Contractor

Status: Active

Date Effective: 7/2/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. This is work in the Chief Information Officer (CIO) Mission Support Office, Computing Services occupational specialty. In coordination with senior management, positions develop the strategic direction and execute program or service resources, plan and implement operations and services, and are accountable for program outcomes including corporate interests. Specifically, they are responsible for management of the design, development, operation, and maintenance of large scale (wide) 24X7 computing infrastructure to include enterprise and departmental servers, disk and tape storage devices, operating system and utility software, and data center planning and environmentals. Positions lead key projects and are responsible for managing large teams of contractors in the daily operations of the's computing infrastructure. Positions also provide advice and guidance to Senior and Executive Management on a broad range of CIO/Computing Services issues and represent the organization as a member of various internal and external boards. Positions at this level have demonstrated competency in leadership, supervision, resource management, and a comprehensive understanding of the organization's mission and customer needs. Based on assignment, incumbents oversee and manage contracting activities associated to Contracting Officer's Technical Representative responsibilities; ensures coordination with the contacting officer.

Short Summary:

This is work in the Chief Information Officer (CIO) Mission Support Office, Computing Services occupational specialty. In coordination with senior management, positions develop the strategic direction and execute program or service resources, plan and implement operations and services, and are accountable for program outcomes including corporate interests. Specifically, they are responsible for management of the design, development, operation, and maintenance of large scale (wide) 24X7 computing infrastructure to include enterprise and departmental servers, disk and tape storage devices, operating system and utility software, and data center planning and environmentals. Positions lead key projects and are responsible for managing large teams of contractors in the daily operations of the's computing infrastructure. Positions also provide advice and guidance to Senior and Executive Management on a broad range of CIO/Computing Services issues and represent the organization as a member of various internal and external boards. Positions at this level have demonstrated competency in leadership, supervision, resource management, and a comprehensive understanding of the organization's mission and customer needs. Based on assignment, incumbents oversee and manage contracting activities associated to Contracting Officer's Technical Representative responsibilities; ensures coordination with the contacting officer.

Duties, Tasks, and Responsibilities

Advises executive managers/customers on issues, impacts, risks, options and implications of key policy decisions.

Advises management and customers on how to implement policies and procedures

Assigns work to subordinates including other Managers and/or Senior Project Managers.

Coordinates on staff resource decisions to meet corporate strategic goals

Depending on assignment may play an active role in recruiting, external hiring, and selection for the component.

Determines appropriate performance metrics for the organization and effectively communicates them to subordinates

Develops strategic alliances with key contacts and senior-level officials.

Develops strategies to increase awareness of CIO business practices and advocates them throughout the organization.

Directs the work of subordinates including other Managers and/or Senior Project Managers to ensure that Computing Services work is performed in an accurate and timely fashion

Ensures Security, Safety, and Counter-Intelligence regulations, policies and procedures are followed.

Ensures daily Computing Services activities and projects are accurately carried out.

Evaluates the performance and skills of subordinates and provides performance and developmental feedback on an ongoing basis.

Incorporates and manages diversity in the workplace

Incorporates "best management practices" in the workplace.

Manages and provides direction and guidance to staff or contractors in the design, development, operation, and maintenance of large scale (wide) 24X7 computing infrastructure to include enterprise and departmental servers, disk and tape storage devices, operating system and utility software, and data center planning and environments.

Manages operations and resources within Computing Services components.
Develops goals/objectives for CIO programs.

Manages the establishment of performance objectives and standards; assists subordinates including other Managers and/or Senior Project Managers in setting individual goals.

Participates in personnel selection and assignment process.

Provides advice and guidance to Senior and Executive Management on a broad range of CIO issues related to Computing Services.

Provides broad technical advice and guidance on CIO processes, resources, policy interpretation, workflow, and Directorate/MSO priorities.

Represents the organization as a member of various internal and external boards, task forces and working groups relevant to CIO's mission in the area of Computing Services. Provides advice and guidance on organization-wide and -wide CIO plans, policies, and regulations, and reviews the adequacy of resources available to organization/CIO programs.

Reviews, advises on and approves plans and concepts for new business and technologies.

Serves as an Agent for Change in the component and CIO; manages the successful and smooth transition from current to desired culture, practices, structure and overall organizational environment as defined by senior leaders.

Sets own career development objectives and continuously improves own level of substantive competence. Maintains relevant certifications.

Supports budget formulation activities; defends and executes organization's budgets in accordance with established regulations and procedures. Monitors resources on a regular basis to ensure activities remain within budget

Knowledge, Skills, and Abilities

Ability to address training and career development needs of individuals, teams or organization to achieve strategic organizational objectives.

Ability to anticipate the changing demands for skills and plans to meet the future demands.

Ability to anticipate, effectively identify, and expediently resolve complex problems.

Ability to be an agent for change, demonstrated by building commitment and allocating resources to make change happen; leading the definition of organizational vision and mission; designing processes, structures, reporting relationships, roles and responsibilities to support change; designing or participating in the design of a transition strategy and communications campaign for change; implementing a strategy for change

Ability to build a business case for a new technology, project or application related to Computing Services with complete funding profile including return on investment analysis.

Ability to effectively define and communicate organizational vision, objectives, initiatives and issues; inspire and motivate others to share vision and work toward its achievement; and collaborate with others to achieve outstanding performance, especially in difficult circumstances and major transitions.

Ability to effectively delegate, coordinate, motivate, and evaluate staff to achieve results.

Ability to evaluate and recommend process improvements and new and emerging technologies to meet customer requirements and emerging mission needs.

Ability to influence strategic or high impact decisions within and outside CIO using effective negotiation skills to address difficult issues with Senior and Executive Managers.

Ability to manage relationships among contractors, customers, and government technical workers demonstrated by fostering a climate conducive to positive working relationships; staying informed on major developments; coaching others in the value, issues and methods of good customer, contractor, and government technical worker relationships.

Ability to plan, set goals and determine strategies for accomplishing results; ability to monitor and evaluate progress toward goals.

Ability to work effectively with teams; demonstrated by fostering a collaborative work environment across the organization; understanding the dynamics and differences in roles to motivate and build team cohesiveness; encouraging information sharing, constructive feedback and cooperation from others; coaching team leaders on issues, problems and solutions options; and demonstrating leadership in cross-functional team initiatives.

Demonstrated ability to manage competing priorities and work requirements by continuously evaluating the needs of the organization's mission against ongoing work.

Demonstrated knowledge of approaches, tools and techniques for justifying a project, equipment or staffing expenditures; identifying cost, benefits and associated risks.

Effective leadership and management skills, gained through previous assignments in formal and informal leadership roles

Highly effective communication skills (oral and written) demonstrated by expressing ideas, explanations and concepts in a manner appropriate for the audience (one-on-one, small groups, open forums, etc.) using a variety of formats (E-mail, briefings, memoranda, etc.).

Highly effective customer service skills, demonstrated by the ability to anticipate, analyze and respond to customer requirements in a manner that provides added value and generates customer satisfaction, even in situations in which the outcome is not what the customer desired.

Highly effective interpersonal skills, demonstrated by building relationships and networks within the Intelligence Community, the , and with subordinates.

Program leadership skills, demonstrated by providing strategic project management consulting; creating and implementing a strategy for supporting current and future business needs of organization; review and approve final strategic plans with customer; develop long-term strategies to deliver services that keep pace with technology trends.

Technical knowledge appropriate to the assignment:
o Significant knowledge of system management tools, software and processes; and associated platform, hardware and software technologies gained from previous assignments managing a centralized server operation and/or IT infrastructure organization.
o Thorough understanding of CIO services with particular depth in the area of Computing Services environment.

Thorough knowledge and ability to adhere to and ensure compliance with all Security and Safety standards, Counter-Intelligence policies and procedures.

Working knowledge of Resource Management policies and procedures gained from previous experience with Contracting, Procurement, Budgeting, Finance and/or Project Management.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Configuration Manager - Developmental

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:
[15-1121] Computer Systems Analysts

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Responsible for maintenance and continuous improvement of the process, working methods and tools, including configuration management of computer systems, networks and their configurations, workstations and their configuration, software development activity, performance tool development and distribution, and applications distribution. Configuration change tracking and documentation control to include, but not limited to concepts of operation, requirements identification and documentation, preliminary and detailed system definition, system design review, performance monitoring tools and production software. Ensure the CM process is introduced and implemented according to guidelines from the process owner. Keep the Configuration Management Database (CMDB) update. Perform audits on the actual CMDB.
Provides continuous coordination of progress on actions, tasking, and issues. Reviews and edits technical documentation, as requested. Serves as a corporate referent on technical writing and editing matters. Serves as the CM authority for reviewing software code deliveries and managing code libraries.

Short Summary:

Responsible for maintenance and continuous improvement of the process, working methods and tools, including configuration management of computer systems, networks and their configurations, workstations and their configuration, software development activity, performance tool development and distribution, and applications distribution. Configuration change tracking and documentation control to include, but not limited to concepts of operation, requirements identification and documentation, preliminary and detailed system definition, system design review, performance monitoring tools and production software. Serves as a corporate referent on technical writing and editing matters. Serves as the CM authority for reviewing software code deliveries and managing code libraries.

Duties, Tasks, and Responsibilities

Configure and monitor audit files for security issues.

Configure and monitor various Web search engines.

Configure and report statistics concerning Web site usage.

Ensure adherence of CM processes throughout life cycle development phases

Ensure overall Web site quality assurance to include properly formatted metadata, common look and feel pages, and navigation buttons.

Evaluate new Web authoring tools or products.

Implement approved changes to CMDB structure including attributes and relationships.

Improve and develop the process, working methods and tools.

Liaise with the customer to ensure requirements are met and ensure the CMDB integrity.

Maintain the configuration management database (CMDB) and maintain system documentation.

Maintain the master project schedule.

Manage a website.

Manage and document the configuration baseline and control process for applications

Manage and track changes to project baselines, as well as regularly track project and master schedule and control gate progress.

Manage the baseline configuration for all-project related work for project oversight as well as office-level oversight and control.

Manage the configuration of software executables to environments (development, test, staging and production)

Plan a schedule of independent audits and perform audits on the CMDB, comparing its contents with the actual IT infrastructure.

Process on a regular cycle discrepancy reports, requirements, build reports, investigation reports, request for changes, operation change requests. Assist in changes to the CM process, responsible for establishing and maintaining both new and existing schedules.

Produce and issue managements reports from CMDB.

Provide executive support to the Configuration Management Board, including scheduling meetings, developing agenda, assisting project managers who are on the agenda and assisting the Chair to run the meetings.

Provide reports and repairs broken links.

Provide support at meetings, enter or updates configuration tracking information in appropriate databases, develop board agendas, notify board attendees of meetings, enter board related data in appropriate databases, install, maintain and troubleshoots problems related to Configuration Control Board action items/issues.

Record and report the change process and implementation status for applications

Record and track Action Items

Report status of Action Items

Report status of CRs, DRs and RFCs

Support project teams in defining, documenting, and changing and baselining project configuration items.

Track and monitor status of Change Requests (CRs), Discrepancy Reports (DRs) and Request For Changes (RFCs)

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID system

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Configuration Manager - Expert

Configure and monitor audit files for security issues

Configure and monitor various Web search engines.

Configure and report statistics concerning Web site usage.

Ensure adherence of CM processes throughout life cycle development phases

Ensure overall Web site quality assurance to include properly formatted metadata, common look and feel pages, and navigation buttons.

Evaluate new Web authoring tools or products.

Implement approved changes to CMDB structure including attributes and relationships.

Improve and develop the process, working methods and tools.

Liaise with the customer to ensure requirements are met and ensure the CMDB integrity.

Maintain the configuration management database (CMDB) and maintain system documentation.

Maintain the master project schedule.

Manage a website.

Manage and document the configuration baseline and control process for applications

Manage and track changes to project baselines, as well as regularly track project and master schedule and control gate progress.

Manage the baseline configuration for all-project related work for project oversight as well as office-level oversight and control.

Manage the configuration of software executables to environments (development, test, staging and production)

Plan a schedule of independent audits and perform audits on the CMDB, comparing its contents with the actual IT infrastructure.

Process on a regular cycle discrepancy reports, requirements, build reports, investigation reports, request for changes, operation change requests. Assist in changes to the CM process, responsible for establishing and maintaining both new and existing schedules.

Produce and issue managements reports from CMDB.

Provide executive support to the Configuration Management Board, including scheduling meetings, developing agenda, assisting project managers who are on the agenda and assisting the Chair to run the meetings.

Provide reports and repairs broken links.

Provide support at meetings, enter or updates configuration tracking information in appropriate databases, develop board agendas, notify board attendees of meetings, enter board related data in appropriate databases, install, maintain and troubleshoots problems related to Configuration Control Board action items/issues.

Record and report the change process and implementation status for applications

Record and track Action Items

Report status of Action Items

Report status of CRs, DRs and RFCs

Support project teams in defining, documenting, and changing and baselining project configuration items.

Track and monitor status of Change Requests (CRs), Discrepancy Reports (DRs) and Request For Changes (RFCs)

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID system

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Configuration Manager - Full Performance

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:
 [15-1121] Computer Systems Analysts

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Responsible for maintenance and continuous improvement of the process, working methods and tools, including configuration management of computer systems, networks and their configurations, workstations and their configuration, software development activity, performance tool development and distribution, and applications distribution. Configuration change tracking and documentation control to include, but not limited to concepts of operation, requirements identification and documentation, preliminary and detailed system definition, system design review, performance monitoring tools and production software. Ensure the CM process is introduced and implemented according to guidelines from the process owner. Keep the Configuration Management Database (CMDB) update. Perform audits on the actual CMDB.
Provides continuous coordination of progress on actions, tasking, and issues. Reviews and edits technical documentation, as requested. Serves as a corporate referent on technical writing and editing matters. Serves as the CM authority for reviewing software code deliveries and managing code libraries.

Short Summary:

Responsible for maintenance and continuous improvement of the process, working methods and tools, including configuration management of computer systems, networks and their configurations, workstations and their configuration, software development activity, performance tool development and distribution, and applications distribution. Configuration change tracking and documentation control to include, but not limited to concepts of operation, requirements identification and documentation, preliminary and detailed system definition, system design review, performance monitoring tools and production software. Ensure the CM process is introduced and implemented according to guidelines from the process owner. Keep the Configuration Management Database (CMDB) update. Perform audits on the actual CMDB.
Provides continuous coordination of progress on actions, tasking, and issues. Reviews and edits technical documentation, as requested. Serves as a corporate referent on technical writing and editing matters. Serves as the CM authority for reviewing software code deliveries and managing code libraries.

Duties, Tasks, and Responsibilities

Configure and monitor audit files for security issues.

Configure and monitor various Web search engines.

Configure and report statistics concerning Web site usage.

Ensure adherence of CM processes throughout life cycle development phases

Ensure overall Web site quality assurance to include properly formatted metadata, common look and feel pages, and navigation buttons.

Evaluate new Web authoring tools or products.

Implement approved changes to CMDB structure including attributes and relationships.

Improve and develop the process, working methods and tools.

Liaise with the customer to ensure requirements are met and ensure the CMDB integrity.

Maintain the configuration management database (CMDB) and maintain system documentation.

Maintain the master project schedule.

Manage a website.

Manage and document the configuration baseline and control process for applications

Manage and track changes to project baselines, as well as regularly track project and master schedule and control gate progress.

Manage the baseline configuration for all-project related work for project oversight as well as office-level oversight and control.

Manage the configuration of software executables to environments (development, test, staging and production)

Plan a schedule of independent audits and perform audits on the CMDB, comparing its contents with the actual IT infrastructure.

Process on a regular cycle discrepancy reports, requirements, build reports, investigation reports, request for changes, operation change requests. Assist in changes to the CM process, responsible for establishing and maintaining both new and existing schedules.

Produce and issue managements reports from CMDB.

Provide executive support to the Configuration Management Board, including scheduling meetings, developing agenda, assisting project managers who are on the agenda and assisting the Chair to run the meetings.

Provide reports and repairs broken links.

Provide support at meetings, enter or updates configuration tracking information in appropriate databases, develop board agendas, notify board attendees of meetings, enter board related data in appropriate databases, install, maintain and troubleshoots problems related to Configuration Control Board action items/issues.

Record and report the change process and implementation status for applications

Record and track Action Items

Report status of Action Items

Report status of CRs, DRs and RFCs

Support project teams in defining, documenting, and changing and baselining project configuration items.

Track and monitor status of Change Requests (CRs), Discrepancy Reports (DRs) and Request For Changes (RFCs)

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID system

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Duties, Tasks, and Responsibilities

Configure and monitor audit files for security issues.

Configure and monitor various Web search engines.

Configure and report statistics concerning Web site usage.

Ensure adherence of CM processes throughout life cycle development phases

Ensure overall Web site quality assurance to include properly formatted metadata, common look and feel pages, and navigation buttons.

Evaluate new Web authoring tools or products.

Implement approved changes to CMDB structure including attributes and relationships.

Improve and develop the process, working methods and tools.

Liaise with the customer to ensure requirements are met and ensure the CMDB integrity.

Maintain the configuration management database (CMDB) and maintain system documentation.

Maintain the master project schedule.

Manage a website.

Manage and document the configuration baseline and control process for applications

Manage and track changes to project baselines, as well as regularly track project and master schedule and control gate progress.

Manage the baseline configuration for all-project related work for project oversight as well as office-level oversight and control.

Manage the configuration of software executables to environments (development, test, staging and production)

Plan a schedule of independent audits and perform audits on the CMDB, comparing its contents with the actual IT infrastructure.

Process on a regular cycle discrepancy reports, requirements, build reports, investigation reports, request for changes, operation change requests. Assist in changes to the CM process, responsible for establishing and maintaining both new and existing schedules.

Produce and issue managements reports from CMDB.

Provide executive support to the Configuration Management Board, including scheduling meetings, developing agenda, assisting project managers who are on the agenda and assisting the Chair to run the meetings.

Provide reports and repairs broken links.

Provide support at meetings, enter or updates configuration tracking information in appropriate databases, develop board agendas, notify board attendees of meetings, enter board related data in appropriate databases, install, maintain and troubleshoots problems related to Configuration Control Board action items/issues.

Record and report the change process and implementation status for applications

Record and track Action Items

Report status of Action Items

Report status of CRs, DRs and RFCs

Support project teams in defining, documenting, and changing and baselining project configuration items.

Track and monitor status of Change Requests (CRs), Discrepancy Reports (DRs) and Request For Changes (RFCs)

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID system

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Customer Services and Information Technology Officer - Developmental

Skill Community: Enterprise IT

Labor Group: Customer Services

Job Classification: Contractor

Status: Active

Date Effective: 10/3/2012

Standard Occupational Code:
 [15-1150] Computer Support Specialists

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Customer Services and Information Technology Officers: Senior (CSITOs:R) provide in-depth Tier 1 and Tier 2 support and problem resolution for technology products and/or applications. Depending upon the area of assignment, CSITO:R work may include the following activities: technology or systems-related, centralized customer service center functions; developing and improving the processes of a centralized technology customer service center; interfacing daily with representatives from all elements of the GCS to resolve technical issues and outages; identifying, analyzing, and implementing process changes; developing performance measures for the GCS organization; soliciting and tracking customer satisfaction feedback; managing the transition of IT service and infrastructure initiatives; providing technical guidance and direction to component close support teams for all new and component specific applications and deployments. Forward deployed CSITOs:R serve as Office/Directorate transition managers and lead activities related to the 's standard operational environment and component application deliveries.

Short Summary:

Customer Services and Information Technology Officers: Senior (CSITOs:R) provide in-depth Tier 1 and Tier 2 support and problem resolution for technology products and/or applications. Depending upon the area of assignment, CSITO:R work may include the following activities: technology or systems-related, centralized customer service center functions; developing and improving the processes of a centralized technology customer service center; interfacing daily with representatives from all elements of the GCS to resolve technical issues and outages; identifying, analyzing, and implementing process changes; developing performance measures for the GCS organization; soliciting and tracking customer satisfaction feedback; managing the transition of IT service and infrastructure initiatives; providing technical guidance and direction to component close support teams for all new and component specific applications and deployments. Forward deployed CSITOs:R serve as Office/Directorate transition managers and lead activities related to the 's standard operational environment and component application deliveries.

Duties, Tasks, and Responsibilities

Coordinates the transition of IT service and infrastructure initiatives. Coordinates the worldwide implementation of IT and security policies that impact IT infrastructure. Assesses and coordinates customer impact of multiple, sometimes conflicting deployment schedules to the standard operational environment and exercises authority to proceed, delay, or cancel deliveries. Serves as stakeholder at appropriate Boards, and other control gates and readiness reviews as required. Engages with service providers or close support team members for data in support of root cause analysis. Provides input on

GCS responses to proposed policy documentation that incorporates mission partner as well as service provider impacts. Propose and review new concepts, program plans, and/or policies to provide substantive input that guides implementation, including writing security plans, MOUs, and SLAs.

Provides 24-hour IS operational support. Monitors and manages applications, hardware, and accesses across the overall enterprise network (AEN) (i.e., equipment, operating environment, and corporate applications that support the transmission, receipt, and processing of information, etc.), including voice, data, video, image, facsimile, audio, workgroup, mainframes, Internet, teleconferencing, Local Area Networks (LAN), and Wide Area Networks (WAN). Reviews reports of critical issues and ensures appropriate resources are assigned to problem. May make resource management and work prioritization decisions. Create, lead, or participates in various quick response "tiger teams" comprised of technical experts tasked with resolving an operational problem or service outage. Coordinates with customer and provides impact analysis to GCS service providers on maintenance and service downtime of any IT services/systems. Writes situation reports and provides impact analysis to GCS senior managers and customer representatives regarding outages and associated customer impacts. Facilitates intra-GCS communication to ensure quick resolution of all IT issues.

Provides thorough IT consulting, triage, and problem resolution for technical products and/or applications on the enterprise IS environment. Interacts with customers to troubleshoot and resolve moderately complex hardware, software, and performance problems and access issues for customers using mainframe, LANs, PCs and printers. Evaluates and identifies solutions; refers Tier 2 and Tier 3 problems to internal or external technical, service personnel; coordinates the procurement of necessary services. Reviews daily and weekly customer service reports, assessing performance and services and assures proper resolution of issues. Assesses performance and services. Evaluates and identifies solutions to open issues. Provides advice, guidance, and instruction to junior contract staff and others on technology service desk functions.

Seeks to improve the processes of IS services. Identifies opportunities for new or more efficient application of the organization's technological capabilities. Recommends upgrades of hardware and software, or modifications to procedures to improve efficiency and maintain regulatory compliance. Develops performance measures for all GCS organizational levels (e.g., developing definitions for routine and critical problem thresholds). Gathers and analyzes data; briefs all levels of management on findings. Recommends and implements process changes.

Solicits and tracks -wide customer satisfaction feedback. Designs survey processes to collect customer feedback. Creates database repositories for storing and retrieving customer feedback. Analyzes customer feedback; investigates problems. Provides liaison between customer and technical. Observes and reports trends

Knowledge, Skills, and Abilities

Ability to define resource requirements and use resources to attain project goals within cost and schedule.

Ability to develop and implement transition plans for customers for the introduction of new technology platforms; develop and present correspondence, technical documents, and reports on moderately complex issues that cross directorate and/or technology boundaries.

Ability to elicit information on moderately complex technical problems from non-technical customers for use in diagnosis, analysis, and resolution of problems requiring significant analysis across multiple environments.

Ability to organize and plan personal as well as team tasks in a changing environment, monitor their execution, anticipate risks, assess impacts, and develop contingency plans.

Ability to prepare and deliver briefings to convey moderately complex information to peers, customers, and management.

Ability to proactively anticipate customer needs, analyze complex requirements, and ensure expectations are met within feasible cost and time projections.

Ability to serve as team lead, providing feedback, guidance, and direction to and sharing knowledge with fellow team members, promoting teamwork and collaboration, emphasizing quality, customer satisfaction, creativity, and cost effectiveness.

Ability to work independently or as lead in team environment to resolve customer problems; ability to identify and resolve complex access problems.

Basic knowledge of Project Management concepts and principles.

Considerable knowledge and extensive occupation-specific knowledge of IT industry.

Considerable knowledge of lifecycle and programmatic milestones, regardless of project type

Considerable knowledge of the functionality and business applicability of pertinent software applications, including (but not limited to) business, corporate, and mission-specific applications.

Considerable knowledge of the organizational structure, mission, and business functions of   to include both WMA and field.

Considerable knowledge of the organizational structure, mission, and business functions of the Intelligence Community.

Considerable knowledge of the 's standard operational environment, including (but not limited to) desktop hardware, software, peripherals, web technologies, security guidelines, operating systems for the major environments, mainframe environments, account management, network infrastructure, telecommunications, and one or more of the major service areas within the Office (i.e., Requirements Management, Desktop Technologies, Corporate Applications, Access Administration, Voice Infrastructure, etc.).

Considerable overall knowledge of the organizational structure, mission, and business functions of the Directorate of Support.

Demonstrated ability to make sound, defensible decisions on a variety of technical, resource, and organizational issues, even in ambiguous or high-pressure situations.

Excellent interpersonal skills to interface consistently and effectively with customers, technical staff, project team members, and management to identify issues, negotiate changes, meet deadlines, market services, and provide excellent customer service.

Excellent oral and written communication skills; ability to explain rules, procedures and highly complex technical information clearly and accurately, both orally and in writing.

Thorough knowledge of the organizational structure, mission, and business functions of OGI and GCS.

Working knowledge of Intelligence Community networks/systems for integration and installation.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Demonstrated ability to make sound, defensible decisions on a variety of technical, resource, and organizational issues, even in ambiguous or high-pressure situations.

Excellent interpersonal skills to interface consistently and effectively with customers, technical staff, project team members, and management to identify issues, negotiate changes, meet deadlines, market services, and provide excellent customer service.

Excellent oral and written communication skills; ability to explain rules, procedures and highly complex technical information clearly and accurately, both orally and in writing.

Thorough knowledge of the organizational structure, mission, and business functions of OGI and GCS.

Working knowledge of Intelligence Community networks/systems for integration and installation.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, and carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Customer Services and Information Technology Officer - Manager

Skill Community: Enterprise IT

Labor Group: Customer Services

Job Classification: Contractor

Status: Active

Date Effective: 7/2/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Customer Services and Information Technology Officers: Senior (CSITOs:R) provide in-depth Tier 1 and Tier 2 support and problem resolution for technology products and/or applications. Depending upon the area of assignment, CSITO:R work may include the following activities: technology or systems-related, centralized customer service center functions; developing and improving the processes of a centralized technology customer service center; interfacing daily with representatives from all elements of the GCS to resolve technical issues and outages; identifying, analyzing, and implementing process changes; developing performance measures for the GCS organization; soliciting and tracking customer satisfaction feedback; managing the transition of IT service and infrastructure initiatives; providing technical guidance and direction to component close support teams for all new and component specific applications and deployments. Forward deployed CSITOs:R serve as Office/Directorate transition managers and lead activities related to the 's standard operational environment and component application deliveries.

Short Summary:

Forward deployed CSITOs:R serve as Office/Directorate transition managers and lead activities related to the 's standard operational environment and component application deliveries.

Duties, Tasks, and Responsibilities

Coordinates the transition of IT service and infrastructure initiatives. Coordinates the worldwide implementation of IT and security policies that impact IT infrastructure. Assesses and coordinates customer impact of multiple, sometimes conflicting deployment schedules to the standard operational environment and exercises authority to proceed, delay, or cancel deliveries. Serves as stakeholder at appropriate Boards, and other control gates and readiness reviews as required. Engages with service providers or close support team members for data in support of root cause analysis. Provides input on GCS responses to proposed policy documentation that incorporates mission partner as well as service

provider impacts. Propose and review new concepts, program plans, and/or policies to provide substantive input that guides implementation, including writing security plans, MOUs, and SLAs.

Provides 24-hour IS operational support. Monitors and manages applications, hardware, and accesses across the overall enterprise network (AEN) (i.e., equipment, operating environment, and corporate applications that support the transmission, receipt, and processing of information, etc.), including voice, data, video, image, facsimile, audio, workgroup, mainframes, Internet, teleconferencing, Local Area Networks (LAN), and Wide Area Networks (WAN). Reviews reports of critical issues and ensures appropriate resources are assigned to problem. May make resource management and work prioritization decisions. Create, lead, or participates in various quick response "tiger teams" comprised of technical experts tasked with resolving an operational problem or service outage. Coordinates with customer and provides impact analysis to GCS service providers on maintenance and service downtime of any IT services/systems. Writes situation reports and provides impact analysis to GCS senior managers and customer representatives regarding outages and associated customer impacts. Facilitates intra-GCS communication to ensure quick resolution of all IT issues.

Provides thorough IT consulting, triage, and problem resolution for technical products and/or applications on the enterprise IS environment. Interacts with customers to troubleshoot and resolve moderately complex hardware, software, and performance problems and access issues for customers using mainframe, LANs, PCs and printers. Evaluates and identifies solutions; refers Tier 2 and Tier 3 problems to internal or external technical, service personnel; coordinates the procurement of necessary services. Reviews daily and weekly customer service reports, assessing performance and services and assures proper resolution of issues. Assesses performance and services. Evaluates and identifies solutions to open issues. Provides advice, guidance, and instruction to junior contract staff and others on technology service desk functions.

Seeks to improve the processes of IS services. Identifies opportunities for new or more efficient application of the organization's technological capabilities. Recommends upgrades of hardware and software, or modifications to procedures to improve efficiency and maintain regulatory compliance. Develops performance measures for all GCS organizational levels (e.g., developing definitions for routine and critical problem thresholds). Gathers and analyzes data; briefs all levels of management on findings. Recommends and implements process changes.

Solicits and tracks -wide customer satisfaction feedback. Designs survey processes to collect customer feedback. Creates database repositories for storing and retrieving customer feedback. Analyzes customer feedback; investigates problems. Provides liaison between customer and technical. Observes and reports trends

Knowledge, Skills, and Abilities

Ability to define resource requirements and use resources to attain project goals within cost and schedule.

Ability to develop and implement transition plans for customers for the introduction of new technology platforms; develop and present correspondence, technical documents, and reports on moderately complex issues that cross directorate and/or technology boundaries.

Ability to elicit information on moderately complex technical problems from non-technical customers for use in diagnosis, analysis, and resolution of problems requiring significant analysis across multiple environments.

Ability to organize and plan personal as well as team tasks in a changing environment, monitor their execution, anticipate risks, assess impacts, and develop contingency plans.

Ability to prepare and deliver briefings to convey moderately complex information to peers, customers, and management.

Ability to proactively anticipate customer needs, analyze complex requirements, and ensure expectations are met within feasible cost and time projections.

Ability to serve as team lead, providing feedback, guidance, and direction to and sharing knowledge with fellow team members, promoting teamwork and collaboration, emphasizing quality, customer satisfaction, creativity, and cost effectiveness.

Ability to work independently or as lead in team environment to resolve customer problems; ability to identify and resolve complex access problems.

Basic knowledge of Project Management concepts and principles.

Considerable knowledge and extensive occupation-specific knowledge of IT industry.

Considerable knowledge of lifecycle and programmatic milestones, regardless of project type

Considerable knowledge of the functionality and business applicability of pertinent software applications, including (but not limited to) business, corporate, and mission-specific applications.

Considerable knowledge of the organizational structure, mission, and business functions of   to include both WMA and field.

Considerable knowledge of the organizational structure, mission, and business functions of the Intelligence Community.

Considerable knowledge of the 's standard operational environment, including (but not limited to) desktop hardware, software, peripherals, web technologies, security guidelines, operating systems for the major environments, mainframe environments, account management, network infrastructure, telecommunications, and one or more of the major service areas within the Office (i.e., Requirements Management, Desktop Technologies, Corporate Applications, Access Administration, Voice Infrastructure, etc.).

Considerable overall knowledge of the organizational structure, mission, and business functions of the Directorate of Support.

Demonstrated ability to make sound, defensible decisions on a variety of technical, resource, and organizational issues, even in ambiguous or high-pressure situations.

Excellent interpersonal skills to interface consistently and effectively with customers, technical staff, project team members, and management to identify issues, negotiate changes, meet deadlines, market services, and provide excellent customer service.

Excellent oral and written communication skills; ability to explain rules, procedures and highly complex technical information clearly and accurately, both orally and in writing.

Thorough knowledge of the organizational structure, mission, and business functions of OGI and GCS.

Working knowledge of Intelligence Community networks/systems for integration and installation.

Cyber Security InfoSec Engineer - Full Performance

Skill Community: Security

Labor Group: Cyber Security

Job Classification: Contractor

Status: Active

Date Effective: 5/17/2012

Standard Occupational Code:

Long Summary:
The Cyber Security InfoSec Engineer provides IT security engineering, integration services and solutions. This includes malicious code detection, intrusion detection, and cyber security tool development and integration.
Cyber Security InfoSec Engineers who are team leads are responsible for project management activities throughout the life of a project and may lead team members to achieve the project objectives and customer requirements through research, evaluation, design, testing and implementation of new or improved information security software, devices or systems.

Short Summary:
The Cyber Security InfoSec Engineer provides IT security engineering, integration services and solutions. This includes malicious code detection, intrusion detection, and information security tool development and integration.

Duties, Tasks, and Responsibilities

Analyze systems, including forensically, for malware, misuse, and/or unauthorized activity.

Investigate virus/malware alerts/incidents to determine root cause, entry point of code, damage risk, and report this information.

Investigation and analysis of all data sources, to include Internet, Intelligence Community reporting, security events, firewall logs, forensic hard-drive images, and other data sources to identify malware, misuse, unauthorized activity or other cyber security related concerns.

Monitor, document, and respond to centrally collected virus alerts.

Participate in project review meetings and provide technical cyber security guidance when necessary.

Refine, edit, and maintain the VPOC training material, which also includes maintenance of a small training/demonstration LAN.

Teach the Virus Point of Contact (VPOC) training class when enough requests warrant a running.

Track, on a daily basis, intelligence (both open and classified sources) concerning malicious code threats and assist in preparation of a daily report to senior Agency management on the current status of a threat and our ability to counteract that threat.

Write reports for Sponsor on the detailed technical analysis results of reverse engineering tasks, provide recommendations for mitigating issue in the future.

Knowledge, Skills, and Abilities

Ability to communicate complex technical concepts and project information clearly and concisely to both technical and non-technical audiences.

Ability to create complex system designs, resolves engineering problems, and proposes preventive strategies.

Ability to identify new technologies and assess their technical and performance characteristics.

Ability to write technical documents addressing complex, sensitive issues.

Considerable knowledge of computing design concepts and implementation.

Good interpersonal, organizational, writing, communications and briefing skills.

Strong analytical and problem solving skills.

Minimum Certifications

ISC2 CISSP

SANS GSEC certification

Minimum Education

Bachelor's degree in computer engineering, computer science, or other closely related IT discipline.

Minimum Experience

Minimum of two years of progressively responsible experience in cyber security, incident response, or related experience

Technology

Encryption technologies

Identity and authentication technologies

Information Assurance assessment tools

Lotus Notes

Microsoft Office

Network Defense monitoring tools and systems

Tools

Computers

Work Environment

Work is primarily performed in an office environment and/or computer laboratory.

Supervision Received and Given

Received: from the Government Task Manager.
Given: none

Cyber Security Project Engineer - Full Performance

Skill Community: Security

Labor Group: Cyber Security

Job Classification: Contractor

Status: Active

Date Effective: 5/17/2012

Standard Occupational Code:

Long Summary:
Project Engineers provide assistance to cyber security projects within the Sponsors organization.
The Cyber Security Project Engineers may have multiple projects they support and administer and will work closely with the Sponsors personnel and management to ensure all program and project milestones are met following all approved processes and procedures with appropriate levels of documentation.
The Project Engineer shall oversee and assist in coordinating (internally and externally) all activities related to engineering activities in order to successfully completed project activities within a reasonable amount of time.
The Project Engineer will also communicate and present project status to a variety of audiences and forums as required. This includes preparing updates to program plans and other documentation on a regular basis.

Short Summary:

Project Engineers provide assistance to cyber security projects within the Sponsors organization.
The Cyber Security Project Engineers may have multiple projects they support and administer and will work closely with the Sponsors personnel and management to ensure all program and project milestones are met.

Duties, Tasks, and Responsibilities

Coordinate, schedule, and support all meetings as directed by the Contractor Program Manager. The Project Engineer is also responsible for assisting the COTR and staff management with all data calls to satisfy Front Office Action Items and other reporting items as requested.

Ensure all program activities maintain system baselines and configuration management items, including security event monitoring "policies" in a manner determined and agreed to by the COTR, the Sponsors management. Ensure changes are made using an approval process.

In addition to the Project Management Plans, the Project Engineer oversees and assists the responsible engineer in maintaining appropriate levels of documentation agreed to as part of an overall for each individual project, including operations and maintenance information, analyst operations guides, design documents and overall concept of operations. The Systems Engineers, Analysts, and others supply the descriptions and/or technical data for the documentation with that knowledge as required.

Knowledge, Skills, and Abilities

Ability to communicate complex technical concepts and project information clearly and concisely to both technical and non-technical audiences.

Ability to create complex system designs, resolves engineering problems, and proposes preventive strategies.

Ability to identify new technologies and assess their technical and performance characteristics.

Ability to write technical documents addressing complex, sensitive issues.

Considerable knowledge of computing design concepts and implementation.

Good interpersonal, organizational, writing, communications and briefing skills.

Strong analytical and problem solving skills.

Minimum Education

Bachelor's degree in computer engineering, computer science, or other closely related IT discipline.

Minimum Experience

Minimum of two years of progressively responsible experience in IT project management.

Technology

Encryption technologies

Identity and authentication technologies

Cyber Security Project Manager - Expert

Skill Community: Security

Labor Group: Cyber Security

Job Classification: Contractor

Status: Active

Date Effective: 5/17/2012

Standard Occupational Code:

Long Summary:
The individual serves as the Project Manager (PM) for a task or a group of tasks involving operation, maintenance, and/or development activities. The individuals proposed for this task shall be clearly specified as key personnel in the Contractor's proposal. Project Manager responsibilities may be combined with other skill categories/requirements such as (but not limited to) Systems Engineer or Information System Application/Software Developer.

Short Summary:
The individual serves as the Project Manager for a task or a group of tasks involving operation, maintenance, and/or development activities.

Duties, Tasks, and Responsibilities

 Responsible for the overall management of specific tasks and insuring that the technical solutions and schedules in the delivery order are implemented in a timely manner.

The PM shall be responsible for maintaining appropriate staffing levels and competent personnel to perform assigned activities on this contract. The PM will ensure all contractors meet the requirements in DOD 8570.01-M for experience, education, and certifications for the position on the contract they are working in

The PM shall be the primary point of contact for the sponsor on all contract and contractor issues and will keep the COTR and Sponsor staff management informed of all issues.

The PM shall ensure that all Project personnel are keeping Sponsor staff management informed of all contractor activities and status.

The PM shall work with Sponsor staff management in developing project plans, project schedules and work plans, and will hold project contract staff accountable for results.

The Project Manager assists the Contract Manager (CM) in working with the Government Contracting Officer (CO), the Contracting Officer's Technical Representative (COTR), Government Task Managers (GTMs), government management personnel, and other Sponsor representatives

The Project Manager will keep the CM informed of personnel performance, requirements, departures, and arrivals on task.

The Project Manager will keep the CM informed of project status, requirements, plans, and schedule.

This individual is responsible for all Contractor personnel/team members and sub-contractors assigned to the contract and shall be able to establish and change work schedules based on Sponsor workload requirements. The PM shall coordinate and deliver monthly status and financial reporting.

Knowledge, Skills, and Abilities

Demonstrated ability to work on multiple requirements and work to flexible priorities

Demonstrated capability in problem resolution to include organizing and structuring solutions to complex problems. This includes the ability to plan projects, meet objectives, develop contingencies, and manage within budget.

Demonstrated first rate written and oral communication skills.

Extensive knowledge of configuration management controls and use.

Extensive knowledge of federal government contract management within classified environments

Good interpersonal, organizational, writing, communications and briefing skills.

Requires an energetic, self-starter that is organized, and capable of working independently as well as in a team environment.

Strong personnel management skills with the ability to effectively manage resources in a technical environment.

Strong programmatic skills and a working understanding of the Sponsor's PMF or other project management methodologies.

Minimum Certifications

Project Management certification

Minimum Education

A bachelor's degree in electrical engineering, computer engineering, computer science, or other closely related discipline. Master's degree preferred

Minimum Experience

Minimum of ten years of progressively responsible experience in Project Management with emphasis in Information Technology, Systems Development, and Security Engineering with InfoSec and/or Cyber Defense background.

Technology

Encryption technologies

Identity and authentication technologies

Information Assurance assessment tools

Lotus Notes

Microsoft Office

Tools

Computer

Work Environment

Work is primarily performed in an office environment and/or computer laboratory.

Supervision Received and Given

Received: from the COTR, Government Task Manager, and Contractors management chain.
Given; Provides direction and guidance to contractor personnel

Cyber Security SME - Expert

Skill Community: Security

Labor Group: Cyber Security

Job Classification: Contractor

Status: Active

Date Effective: 5/17/2012

Standard Occupational Code:

Long Summary:
This individual is the Cyber Security/Computer and Network Defense Subject Matter Expert (SME), concentrating on overall technical and operational effectiveness of capabilities in coordination with the COTR and Sponsor Staff management. Cyber Security SME for the Sponsor is responsible for providing recommendations on continuous improvement of the processes and architectures supporting the overall Cyber Defense operational activities including, but not limited to: analysis, incident handling and reporting products, and the reporting lifecycle.
Ensures the effective operations of Agency IT systems and network defenses, providing effective incident response capabilities, usable and effective reports that address overall situational awareness.
This individual works to maximize the use of existing tools to correlate information and synthesize data into usable and actionable events.
 Identifies and provides an agile approach to the automation of any manual and inefficient processes that exist across the cyber defense program and to work with the Sponsor to recommend and implement technical solutions designed to return time to mission.

Short Summary:

This individual is the Cyber Security/Computer and Network Defense Subject Matter Expert (SME), concentrating on overall technical and operational effectiveness of capabilities in coordination with the COTR and Sponsor Staff management.

Duties, Tasks, and Responsibilities

Assist in indicator reporting.

Provide insight into industry trends and make recommendations on future direction for the program.

Provide insight into latest threats and countermeasures

Provide recommendations for end-to-end analytical process

Provide technical/analytical recommendations for improvement to the CIRT Analyst team

Provide training, mentoring, and hands on help to raise the talent/skill level of Cyber Security Analysts

Work with the Sponsor Analyst Lead/Lead Engineer to improve metrics for reporting

Knowledge, Skills, and Abilities

Ability to communicate complex technical concepts and project information clearly and concisely to both technical and non-technical audiences.

Ability to create complex system designs, resolve engineering problems, and propose preventive strategies.

Ability to identify and undertake necessary steps to minimize the impact of unanticipated events on task completion.

Ability to identify new technologies and assess their technical and performance characteristics.

Ability to lead and manage effectively.

Ability to organize, plan and prioritize multiple tasks so that work is completed on schedule.

Ability to write technical documents addressing complex, sensitive issues.

Considerable knowledge of Cyber Security and CIO policies and procedures.

Considerable knowledge of Enterprise and IC networks and systems.

Considerable knowledge of computing design concepts and implementation.

Excellent interpersonal, organizational, writing, communications and briefing skills.

Strong analytical and problem solving skills.

Minimum Certifications

CEH

CISSP

Other applicable certifications

Minimum Education

A bachelor's degree in electrical engineering, computer engineering, computer science, or other closely related IT or Cyber Security discipline.

Minimum Experience

Minimum of ten years of progressively responsible experience in Cyber Security, InfoSec, Security Engineering, Network Engineering with emphasis in cyber security issues and operations, computer incident response, systems architecture, data management.

Cyber Security Systems Engineer - Full Performance

Skill Community: Security

Labor Group: Cyber Security

Job Classification: Contractor

Status: Active

Date Effective: 5/17/2012

Standard Occupational Code:

Long Summary:
Cyber Security Systems Engineers work on all systems and/or projects within the Sponsors organization responsible for providing Network Defense.

Short Summary:
Cyber Security Systems Engineers work on all systems and/or projects within the Sponsors organization responsible for providing Network Defense.

Duties, Tasks, and Responsibilities

Beta testing when directed by COTR

Conduct proof of concept testing

Conduct tier III support of current infrastructure

Design, test, and integrate new security products as directed by COTR

Ensure all Network Defense capabilities are kept current, patched, and securely configured and management informed of status, working with O&M.

Full time engineering support for all primary systems such as network based Intrusion Detection and Protection Systems (IDPS).

Integration of security products, including designs for all Agency networks

Maintain a network diagram for each Instruction Detection, CIRT capability and sensors and make available to all Sponsor personnel.

Maintain system baselines and configuration management items, including security event monitoring "policies" in a manner determined and agreed to by the program management

Provide engineering documentation and interaction with Analysts and O&M to ensure a complete and functioning system that meets requirements

Software testing (patches, other updates)

Knowledge, Skills, and Abilities

Familiarity with network security applications, protocols and associated hardware

Good interpersonal, organizational, writing, communications and briefing skills.

Strong analytical and problem solving skills.

Minimum Certifications

Depending on the duties the incumbent may require Agency Certified Tempest Test Engineer.

Depending on the duties the incumbent may require CISSP certification

Minimum Education

A bachelor's degree in electrical engineering, computer engineering, computer science, or other closely related discipline.

Minimum Experience

Some Linux experience

Minimum of five years of progressively responsible experience in network engineering with emphasis in design, implementation, operations and maintenance of a variety of Windows Servers, Application and Database servers, relevant Network Security appliances and Endpoint Security products.

Cyber Security Systems Integrator - Full Performance

Skill Community: Security

Labor Group: Cyber Security

Job Classification: Contractor

Status: Active

Date Effective: 5/17/2012

Standard Occupational Code:

Long Summary:
Systems Integrators provide a total systems perspective including a technical understanding of relationships, dependencies, and requirements of hardware and software components. Systems Integrators assist IAG management and project managers by collecting, tracking, and communicating data about projects.

Short Summary:

Systems Integrators provide a total systems perspective including a technical understanding of relationships, dependencies, and requirements of hardware and software components. Systems Integrators assist IAG management and project managers by collecting, tracking, and communicating data about projects.

Duties, Tasks, and Responsibilities

Coordinate, support, and participate in program meetings and reviews (includes distributing meeting agenda, preparation of materials/documents, setting up conference rooms, and taking minutes).

Create, draft, and/or review program documentation, generate formal documentation, and participate in system and program reviews.

Develop and monitor sponsor website content to ensure it is up to date and accurate.

Manage/update project schedule(s) to ensure coordination and information flow occurs between all programs and organizational managers.

Review program plans and identify inconsistencies, ensure impacts are identified, understood, and communicated.

Track project studies, plans, actions items, etc. during meetings and reviews.

Knowledge, Skills, and Abilities

Familiarity with INFOSEC principles, issues, and technology.

Knowledge of ICD 503 requirements for Information Systems.

Knowledge of life-cycle support in the areas of maintenance, administration, and management.

Minimum Certifications

ISC2 CISSP certification

SANS GSEC certification within 9 months of start date on the contract.

Minimum Education

A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or other related scientific or technical discipline is required.

Minimum Experience

A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or other related scientific or technical discipline is required.

Technology

Encryption technologies

Identity and authentication technologies

Information Assurance assessment tools

Lotus Notes

Microsoft Office

Tools

Computers

Work Environment

Data Architect - Developmental

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:
 [15-1143] Computer Network Architects

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Incumbent serves as the lead technical resource for strategic oversight and planning of database structural design and development. Positions provide technical, strategic guidance to senior level database administrators and application developers in the creation and implementation of new databases, as well as the maintenance of major existing databases supporting evolving applications. Additionally, positions provide strategic guidance to data stewards on the development and implementation of data models to support organizational business processes. Duties include leading and consulting to all levels of the organization on the design, development and implementation of logical database structures and classification schema; and developing policies and procedures to build, maintain and leverage the data model; provides technical, strategic guidance on the development of metadata tags, Document Type Definitions (DTD), and schemas using appropriate technologies for representation such as HTML and XML; ensures that metadata and data standards and definitions will support both local business processes and system implementations thereof, and corporate requirements for sharing data.

Short Summary:

Incumbent serves as the lead technical resource for strategic oversight and planning of database structural design and development. Positions provide technical, strategic guidance to senior level database administrators and application developers in the creation and implementation of new databases, as well as the maintenance of major existing databases supporting evolving applications. Additionally, positions provide strategic guidance to data stewards on the development and implementation of data models to support organizational business processes. Duties include leading and consulting to all levels of the organization on the design, development and implementation of logical database structures and classification schema; and developing policies and procedures to build, maintain and leverage the data model; provides technical, strategic guidance on the development of metadata tags, Document Type Definitions (DTD), and schemas using appropriate technologies for representation such as HTML and XML; ensures that metadata and data standards and definitions will support both local business processes and system implementations thereof, and corporate requirements for sharing data.

Duties, Tasks, and Responsibilities

Develops data and metadata policies and procedures for structural design and development to build, maintain and leverage the data model, ensuring integration with corporate data standards.

Monitors industry trends and directions in database technology and tools; develops and presents substantive technical recommendations to senior management.

Monitors industry trends and directions; develops and presents substantive technical recommendations to senior management

Oversees the design, evaluation, selection, implementation and support of major databases and metadata structures; reviews and evaluates database performance, risk and financial analysis feasibility studies.

Oversees the strategic structural design and development of databases and metadata.

Provides advanced technical direction to the maintenance of major existing databases supporting evolving applications and business processes.

Provides complete assessments of the technical characteristics of proposals and alternatives considered to optimize database performance.

Provides extensive technical, strategic advice and guidance of the highest level to senior managers and technical resources in the creation and implementation of new data standards and databases.

Provides technical oversight and direction to designated boards for integrating new technology or major new mission capabilities into the metadata and data standards and structures.

Reviews and assesses technical proposals requesting changes or upgrades to the existing databases.

Serves as the lead technical resource in the strategic oversight and planning of data models and database structural design and development.

Strategically plans new designs for integration into a database structure, using knowledge of the characteristics of the systems being added to the structure and the specifications for database interfaces to ensure effective integration and optimal database performance.

Knowledge, Skills, and Abilities

Ability to develop and present complex technical documents, procedures, reports, briefings and proposals.

Ability to develop and recommend data management policies, standards, practices and security measures to ensure effective and consistent data management operations.

Ability to develop methods of ensuring that the data incompatibilities among systems are systematically eliminated.

Ability to effectively diagnose, isolate and expediently resolve complex problems pertaining to data infrastructure.

Ability to effectively monitor program/project development.

Ability to evaluate and make recommendations regarding data integrity.

Ability to project database resource requirements including personnel, software, equipment and facilities.

Ability to translate complex technical terminology, concepts and issues in terms understandable to technical and non-technical management and resources staff.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Computers and Electronics — Knowledge of industry data standards and architectures; knowledge of design and integration principles of complex, heterogeneous databases; knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — adjusting actions in relation to others' actions.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Leadership – ability to resolve issues in a professional manner, lead working groups, negotiate, and create consensus.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Problem Sensitivity — the ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Thorough knowledge of design and integration principles for complex, heterogeneous databases.

Thorough knowledge of missions and needs, and considerable knowledge of Intelligence Community missions, needs, and information sharing requirements.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Data Architect - Expert

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Data Architect - Full Performance

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:
 [15-1143] Computer Network Architects

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Incumbent serves as the lead technical resource for strategic oversight and planning of database structural design and development. Positions provide technical, strategic guidance to senior level database administrators and application developers in the creation and implementation of new databases, as well as the maintenance of major existing databases supporting evolving applications. Additionally, positions provide strategic guidance to data stewards on the development and implementation of data models to support organizational business processes. Duties include leading and consulting to all levels of the organization on the design, development and implementation of logical database structures and classification schema; and developing policies and procedures to build, maintain and leverage the data model; provides technical, strategic guidance on the development of metadata tags, Document Type Definitions (DTD), and schemas using appropriate technologies for representation such as HTML and XML; ensures that metadata and data standards and definitions will support both local business processes and system implementations thereof, and corporate requirements for sharing data.

Short Summary:
Incumbent serves as the lead technical resource for strategic oversight and planning of database structural design and development. Positions provide technical, strategic guidance to senior level database administrators and application developers in the creation and implementation of new databases, as well as the maintenance of major existing databases supporting evolving applications. Additionally, positions provide strategic guidance to data stewards on the development and implementation of data models to support organizational business processes. Duties include leading and consulting to all levels of the organization on the design, development and implementation of logical database structures and classification schema; and developing policies and procedures to build, maintain and leverage the data model; provides technical, strategic guidance on the development of metadata tags, Document Type Definitions (DTD), and schemas using appropriate technologies for representation such as HTML and XML; ensures that metadata and data standards and definitions will support both local business processes and system implementations thereof, and corporate requirements for sharing data.

Duties, Tasks, and Responsibilities

Develops data and metadata policies and procedures for structural design and development to build, maintain and leverage the data model, ensuring integration with corporate data standards.

Monitors industry trends and directions in database technology and tools; develops and presents substantive technical recommendations to senior management.

Monitors industry trends and directions; develops and presents substantive technical recommendations to senior management

Oversees the design, evaluation, selection, implementation and support of major databases and metadata structures; reviews and evaluates database performance, risk and financial analysis feasibility studies.

Oversees the strategic structural design and development of databases and metadata.

Provides advanced technical direction to the maintenance of major existing databases supporting evolving applications and business processes.

Provides complete assessments of the technical characteristics of proposals and alternatives considered to optimize database performance.

Provides extensive technical, strategic advice and guidance of the highest level to senior managers and technical resources in the creation and implementation of new data standards and databases.

Provides technical oversight and direction to designated boards for integrating new technology or major new mission capabilities into the metadata and data standards and structures.

Reviews and assesses technical proposals requesting changes or upgrades to the existing databases.

Serves as the lead technical resource in the strategic oversight and planning of data models and database structural design and development.

Strategically plans new designs for integration into a database structure, using knowledge of the characteristics of the systems being added to the structure and the specifications for database interfaces to ensure effective integration and optimal database performance.

Knowledge, Skills, and Abilities

Ability to develop and present complex technical documents, procedures, reports, briefings and proposals.

Ability to develop and recommend data management policies, standards, practices and security measures to ensure effective and consistent data management operations.

Ability to develop methods of ensuring that the data incompatibilities among systems are systematically eliminated.

Ability to effectively diagnose, isolate and expediently resolve complex problems pertaining to data infrastructure.

Ability to effectively monitor program/project development.

Ability to evaluate and make recommendations regarding data integrity.

Ability to project database resource requirements including personnel, software, equipment and facilities.

Ability to translate complex technical terminology, concepts and issues in terms understandable to technical and non-technical management and resources staff.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Computers and Electronics — Knowledge of industry data standards and architectures; knowledge of design and integration principles of complex, heterogeneous databases; knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — adjusting actions in relation to others' actions.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Leadership – ability to resolve issues in a professional manner, lead working groups, negotiate, and create consensus.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Problem Sensitivity — the ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Thorough knowledge of design and integration principles for complex, heterogeneous databases.

Thorough knowledge of missions and needs, and considerable knowledge of Intelligence Community missions, needs, and information sharing requirements.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Data Architect - Manager

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. The Database Administrator (DBA) works with software and determines ways to organize and store data. Identify user requirements, set up computer databases, and test and coordinate modifications to the computer database systems Ensures the performance of the system, understands the platform on which the database runs, and adds new users to the system. Plans and coordinates security measures -data integrity, backup systems, and database security. Provides technical assistance to computer system users, answers questions, or resolves computer problems for clients in person, via telephone or from remote location. May provide assistance concerning the use of computer hardware and software, including printing, installation, word-processing, electronic mail, and operating systems. Provides technical expertise in the use of Database Management System (DBMS). Evaluates and recommends available DBMS products to support validated user requirements. Defines file organization, indexing methods, and security procedures for specific user applications. Manages the development of data base projects. Plans and budgets staff and data base resources. When necessary, reallocates resources to maximize benefits.

Short Summary:

The database administrator is also responsible for capacity planning. Provides support for implementation, troubleshooting and maintenance of IT systems. Manages IT system infrastructure and any processes related to these systems. Provides support to IT systems including: day-to-day operations, monitoring and problem resolution for all of the client problems. Provides second level problem identification, diagnosis and resolution of problems. Provides support for the dispatch system and hardware problems and remain involved in the resolution process. Provides support for the escalation and communication of status to management and internal customers. Coordinates changes to computer databases, test and implement the database applying knowledge of database management systems. Plans, coordinates, and implements security measures to safeguard computer databases. Responsible for operations related to systems management software. Installs and maintains software monitors and conducts advanced analysis of output and performance.

Duties, Tasks, and Responsibilities

Answer users' inquiries regarding computer software and hardware operation to resolve problems

Baseline and forecast server performance data and tunes server hardware and software configurations.

Conduct computer diagnostics to investigate and resolve problems and to provide technical assistance and support

Conduct office automation feasibility studies, including workflow analysis, space design, or cost comparison analysis

Confer with staff, users, and management to establish requirements for new systems or modifications

Ensure that proposed object definitions are clear, concise, technically correct, and that they represent singular concepts

Ensure that services are provided with sufficient capacity to meet the business requirements

Enter commands and observe system functioning to verify correct operations and detect errors

Evaluate proposed objects and their attributes

Inspect equipment and read order sheets to prepare for delivery to users.

Install and configure database environments and associated storage systems

Install and perform minor repairs to hardware, software, and peripheral equipment, following design or installation specifications

Maintain record of daily data communication transactions, problems and remedial action taken, and installation activities

Manage, monitor and administer database system performance and schedule activities

Modify and customize commercial programs for internal needs

Monitor and conduct advanced analysis of output and performance of management of systems according to prescribed standards

Oversee the daily performance of computer systems

Perform backups/restores, and archive data

Perform optimization and tuning of data loads and extractions

Perform server and storage capacity management and planning for the most complex and critical systems.

Perform server performance tuning.

Plan and test capacity requirements

Plan for transition of the development and/or production environment to new technology.

Prepare evaluations of software or hardware, and recommend improvements or upgrades

Provide technical support in the evaluation of prime object names, data elements, and other objects

Read trade magazines and technical manuals, or attend conferences and seminars to maintain knowledge of hardware and software

Recommend and implement process and tool improvements to improve the efficiency and effectiveness of the organization's change management and configuration management processes and systems.

Recommend and plan server recapitalization

Recommend appropriate procedure, query or package changes and optimizations to ensure and improve system performance and reliability

Set up equipment for employee use, performing or ensuring proper installation of cable, operating systems, and appropriate software

Study system requirements to determine proper server installation methods and procedures.

Utilize system software to monitor the performance of system files; manages system data to maintain performance efficiencies

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming

Coordination — Adjusting actions in relation to others' actions

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction

Data Models — Experience interpreting data models and developing database structures; using standard diagramming techniques to design and develop computer data models; and implementing and troubleshooting programming changes and modifications

Database — Supporting the TeamPlay® application with data input to very sophisticated DBA support of databases like Oracle

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents

Security — Knowledge of security requirements for databases, developing, documenting, and implementing backup and recovery procedures.

Speaking — Talking to others to convey information effectively

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server, Database models

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Data Architect - Senior

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:
[15-1143] Computer Network Architects

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Incumbent serves as the lead technical resource for strategic oversight and planning of database structural design and development. Positions provide technical, strategic guidance to senior level database administrators and application developers in the creation and implementation of new databases, as well as the maintenance of major existing databases supporting evolving applications. Additionally, positions provide strategic guidance to data stewards on the development and implementation of data models to support organizational business processes. Duties include leading and consulting to all levels of the organization on the design, development and implementation of logical database structures and classification schema; and developing policies and procedures to build, maintain and leverage the data model; provides technical, strategic guidance on the development of metadata tags, Document Type Definitions (DTD), and schemas using appropriate technologies for representation such as HTML and XML; ensures that metadata and data standards and definitions will support both local business processes and system implementations thereof, and corporate requirements for sharing data.

Short Summary:
Incumbent serves as the lead technical resource for strategic oversight and planning of database structural design and development. Positions provide technical, strategic guidance to senior level database administrators and application developers in the creation and implementation of new databases, as well as the maintenance of major existing databases supporting evolving applications. Additionally, positions provide strategic guidance to data stewards on the development and implementation of data models to support organizational business processes. Duties include leading and consulting to all levels of the organization on the design, development and implementation of logical database structures and classification schema; and developing policies and procedures to build, maintain and leverage the data model; provides technical, strategic guidance on the development of metadata tags, Document Type Definitions (DTD), and schemas using appropriate technologies for representation such as HTML and XML; ensures that metadata and data standards and definitions will support both local business processes and system implementations thereof, and corporate requirements for sharing data.

Duties, Tasks, and Responsibilities

Develops data and metadata policies and procedures for structural design and development to build, maintain and leverage the data model, ensuring integration with corporate data standards.

Monitors industry trends and directions in database technology and tools; develops and presents substantive technical recommendations to senior management.

Monitors industry trends and directions; develops and presents substantive technical recommendations to senior management

Oversees the design, evaluation, selection, implementation and support of major databases and metadata structures; reviews and evaluates database performance, risk and financial analysis feasibility studies.

Oversees the strategic structural design and development of databases and metadata.

Provides advanced technical direction to the maintenance of major existing databases supporting evolving applications and business processes.

Provides complete assessments of the technical characteristics of proposals and alternatives considered to optimize database performance.

Provides extensive technical, strategic advice and guidance of the highest level to senior managers and technical resources in the creation and implementation of new data standards and databases.

Provides technical oversight and direction to designated boards for integrating new technology or major new mission capabilities into the metadata and data standards and structures.

Reviews and assesses technical proposals requesting changes or upgrades to the existing databases.

Serves as the lead technical resource in the strategic oversight and planning of data models and database structural design and development.

Strategically plans new designs for integration into a database structure, using knowledge of the characteristics of the systems being added to the structure and the specifications for database interfaces to ensure effective integration and optimal database performance.

Knowledge, Skills, and Abilities

Ability to develop and present complex technical documents, procedures, reports, briefings and proposals.

Ability to develop and recommend data management policies, standards, practices and security measures to ensure effective and consistent data management operations.

Ability to develop methods of ensuring that the data incompatibilities among systems are systematically eliminated.

Ability to effectively diagnose, isolate and expediently resolve complex problems pertaining to data infrastructure.

Ability to effectively monitor program/project development.

Ability to evaluate and make recommendations regarding data integrity.

Ability to project database resource requirements including personnel, software, equipment and facilities.

Ability to translate complex technical terminology, concepts and issues in terms understandable to technical and non-technical management and resources staff.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Computers and Electronics — Knowledge of industry data standards and architectures; knowledge of design and integration principles of complex, heterogeneous databases; knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — adjusting actions in relation to others' actions.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Leadership – ability to resolve issues in a professional manner, lead working groups, negotiate, and create consensus.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Problem Sensitivity — the ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Thorough knowledge of design and integration principles for complex, heterogeneous databases.

Thorough knowledge of missions and needs, and considerable knowledge of Intelligence Community missions, needs, and information sharing requirements.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Data Architect - Subject Matter Expert

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:
 [15-1143] Computer Network Architects

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. The Database Administrator (DBA) works with software and determines ways to organize and store data. Identify user requirements, set up computer databases, and test and coordinate modifications to the computer database systems Ensures the performance of the system, understands the platform on which the database runs, and adds new users to the system. Plans and coordinates security measures -data integrity, backup systems, and database security. Provides technical assistance to computer system users, answers questions, or resolves computer problems for clients in person, via telephone or from remote location. May provide assistance concerning the use of computer hardware and software, including printing, installation, word-processing, electronic mail, and operating systems. Provides technical expertise in the use of Database Management System (DBMS). Evaluates and recommends available DBMS products to support validated user requirements. Defines file organization, indexing methods, and security procedures for specific user applications. Manages the development of data base projects. Plans and budgets staff and data base resources. When necessary, reallocates resources to maximize benefits.

Short Summary:

The database administrator is also responsible for capacity planning. Provides support for implementation, troubleshooting and maintenance of IT systems. Manages IT system infrastructure and any processes related to these systems. Provides support to IT systems including: day-to-day operations, monitoring and problem resolution for all of the client problems. Provides second level problem identification, diagnosis and resolution of problems. Provides support for the dispatch system and hardware problems and remain involved in the resolution process. Provides support for the escalation and communication of status to management and internal customers. Coordinates changes to computer databases, test and implement the database applying knowledge of database management systems. Plans, coordinates, and implements security measures to safeguard computer databases. Responsible for operations related to systems management software. Installs and maintains software monitors and conducts advanced analysis of output and performance.

Duties, Tasks, and Responsibilities

Answer users' inquiries regarding computer software and hardware operation to resolve problems

Baseline and forecast server performance data and tunes server hardware and software configurations.

Conduct computer diagnostics to investigate and resolve problems and to provide technical assistance and support

Conduct office automation feasibility studies, including workflow analysis, space design, or cost comparison analysis

Confer with staff, users, and management to establish requirements for new systems or modifications

Ensure that proposed object definitions are clear, concise, technically correct, and that they represent singular concepts

Ensure that services are provided with sufficient capacity to meet the business requirements

Enter commands and observe system functioning to verify correct operations and detect errors

Evaluate proposed objects and their attributes

Inspect equipment and read order sheets to prepare for delivery to users.

Install and configure database environments and associated storage systems

Install and perform minor repairs to hardware, software, and peripheral equipment, following design or installation specifications

Maintain record of daily data communication transactions, problems and remedial action taken, and installation activities

Manage, monitor and administer database system performance and schedule activities

Modify and customize commercial programs for internal needs

Monitor and conduct advanced analysis of output and performance of management of systems according to prescribed standards

Oversee the daily performance of computer systems

Perform backups/restores, and archive data

Perform optimization and tuning of data loads and extractions

Perform server and storage capacity management and planning for the most complex and critical systems.

Perform server performance tuning.

Plan and test capacity requirements

Plan for transition of the development and/or production environment to new technology.

Prepare evaluations of software or hardware, and recommend improvements or upgrades

Provide technical support in the evaluation of prime object names, data elements, and other objects

Read trade magazines and technical manuals, or attend conferences and seminars to maintain knowledge of hardware and software

Recommend and implement process and tool improvements to improve the efficiency and effectiveness of the organization's change management and configuration management processes and systems.

Recommend and plan server recapitalization

Recommend appropriate procedure, query or package changes and optimizations to ensure and improve system performance and reliability

Set up equipment for employee use, performing or ensuring proper installation of cable, operating systems, and appropriate software

Study system requirements to determine proper server installation methods and procedures.

Utilize system software to monitor the performance of system files; manages system data to maintain performance efficiencies

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming

Coordination — Adjusting actions in relation to others' actions

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction

Data Models — Experience interpreting data models and developing database structures; using standard diagramming techniques to design and develop computer data models; and implementing and troubleshooting programming changes and modifications

Database — Supporting the TeamPlay® application with data input to very sophisticated DBA support of databases like Oracle

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents

Security — Knowledge of security requirements for databases, developing, documenting, and implementing backup and recovery procedures.

Speaking — Talking to others to convey information effectively

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server, Database models

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Database Administrator - Developmental

Skill Community: Enterprise IT

Labor Group: Administration

Job Classification: Contractor

Status: Active

Date Effective: 10/3/2012

Standard Occupational Code:
 [15-1141] Database Administrators

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. The Database Administrator (DBA) works with software and determines ways to organize and store data. Identify user requirements, set up computer databases, and test and coordinate modifications to the computer database systems Ensures the performance of the system, understands the platform on which the database runs, and adds new users to the system. Plans and coordinates security measures -data integrity, backup systems, and database security. Provides technical assistance to computer system users, answers questions, or resolves computer problems for clients in person, via telephone or from remote location. May provide assistance concerning the use of computer hardware and software, including printing, installation, word-processing, electronic mail, and operating systems. Provides technical expertise in the use of Database Management System (DBMS). Evaluates and recommends available DBMS products to support validated user requirements. Defines file organization, indexing methods, and security procedures for specific user applications. Manages the development of data base projects.
The database manager is also responsible for capacity planning. Provides support for implementation, troubleshooting and maintenance of IT systems. Manages IT system infrastructure and any processes related to these systems. Provides support to IT systems including: day-to-day operations, monitoring and problem resolution for all of the client problems. Provides second level problem identification, diagnosis and resolution of problems. Provides support for the dispatch system and hardware problems and remain involved in the resolution process. Provides support for the escalation and communication of status to management and internal customers. Coordinates changes to computer databases, test and implement the database applying knowledge of database management systems. Plans, coordinates, and implements security measures to safeguard computer databases. Responsible for operations related to systems management software. Installs and maintains software monitors and conducts advanced analysis of output and performance.

Short Summary:

The Database Administrator (DBA) works with software and determines ways to organize and store data. Identify user requirements, set up computer databases, and test and coordinate modifications to the computer database systems Ensures the performance of the system, understands the platform on which the database runs, and adds new users to the system. Plans and coordinates security measures -data integrity, backup systems, and database security.

Duties, Tasks, and Responsibilities

Answer users' inquiries regarding computer software and hardware operation to resolve problems.

Baseline and forecast server performance data and tunes server hardware and software configurations.

Conduct computer diagnostics to investigate and resolve problems and to provide technical assistance and support.

Conduct office automation feasibility studies, including workflow analysis, space design, or cost comparison analysis.

Confer with staff, users, and management to establish requirements for new systems or modifications.

Create and maintain monitor definitions and rules based upon requirements from Service Level Agreements (SLAs).

Ensure that proposed object definitions are clear, concise, technically correct, and that they represent singular concepts.

Ensure that services are provided with sufficient capacity to meet the business requirements.

Enter commands and observe system functioning to verify correct operations and detect errors.

Evaluate proposed objects and their attributes.

Inspect equipment and read order sheets to prepare for delivery to users.

Install and configure database environments and associated storage systems.

Install and perform minor repairs to hardware, software, and peripheral equipment, following design or installation specifications.

Maintain record of daily data communication transactions, problems and remedial action taken, and installation activities.

Manage, monitor and administer database system performance and schedule activities.

Modify and customize commercial programs for internal needs.

Monitor and conduct advanced analysis of output and performance of management of systems according to prescribed standards.

Oversee the daily performance of computer systems.

Perform backups/restores, and archive data.

Perform optimization and tuning of data loads and extractions.

Perform server and storage capacity management and planning for the most complex and critical systems.

Perform server performance tuning.

Plan and test capacity requirements.

Plan for transition of the development and/or production environment to new technology.

Prepare evaluations of software or hardware, and recommend improvements or upgrades.

Provide technical support in the evaluation of prime object names, data elements, and other objects.

Read trade magazines and technical manuals, or attend conferences and seminars to maintain knowledge of hardware and software.

Recommend and implement process and tool improvements to improve the efficiency and effectiveness of the organization's change management and configuration management processes and systems.

Recommend and plan server recapitalization.

Recommend appropriate procedure, query or package changes and optimizations to ensure and improve system performance and reliability.

Set up equipment for employee use, performing or ensuring proper installation of cable, operating systems, and appropriate software.

Study system requirements to determine proper server installation methods and procedures.

Utilize system software to monitor the performance of system files; manages system data to maintain performance efficiencies.

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Data Models — Experience interpreting data models and developing database structures; using standard diagramming techniques to design and develop computer data models; and implementing and troubleshooting programming changes and modifications.

Database — Supporting the TeamPlay® application with data input to very sophisticated DBA support of databases like Oracle

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Security — Knowledge of security requirements for databases, developing, documenting, and implementing backup and recovery procedures.

Speaking — Talking to others to convey information effectively

Systems Environment — Experience configuring, managing and maintaining the operation of complex relational databases; familiarity with UNIX and Windows operating systems.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server, Database models

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Speaking — Talking to others to convey information effectively

Systems Environment — Experience configuring, managing and maintaining the operation of complex relational databases; familiarity with UNIX and Windows operating systems.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server, Database models

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Database Administrator - Manager

Skill Community: Enterprise IT

Labor Group: Administration

Job Classification: Contractor

Status: Active

Date Effective: 7/2/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. The Database Administrator (DBA) works with software and determines ways to organize and store data. Identify user requirements, set up computer databases, and test and coordinate modifications to the computer database systems Ensures the performance of the system, understands the platform on which the database runs, and adds new users to the system. Plans and coordinates security measures -data integrity, backup systems, and database security. Provides technical assistance to computer system users, answers questions, or resolves computer problems for clients in person, via telephone or from remote location. May provide assistance concerning the use of computer hardware and software, including printing, installation, word-processing, electronic mail, and operating systems. Provides technical expertise in the use of Database Management System (DBMS). Evaluates and recommends available DBMS products to support validated user requirements. Defines file organization, indexing methods, and security procedures for specific user applications. Manages the development of data base projects.
The database manager is also responsible for capacity planning. Provides support for implementation, troubleshooting and maintenance of IT systems. Manages IT system infrastructure and any processes related to these systems. Provides support to IT systems including: day-to-day operations, monitoring and problem resolution for all of the client problems. Provides second level problem identification, diagnosis and resolution of problems. Provides support for the dispatch system and hardware problems and remain involved in the resolution process. Provides support for the escalation and communication of status to management and internal customers. Coordinates changes to computer databases, test and implement the database applying knowledge of database management systems. Plans, coordinates, and implements security measures to safeguard computer databases. Responsible for operations related to systems management software. Installs and maintains software monitors and conducts advanced analysis of output and performance.

Short Summary:

The Database Administrator (DBA) works with software and determines ways to organize and store data. Identify user requirements, set up computer databases, and test and coordinate modifications to the computer database systems Ensures the performance of the system, understands the platform on which the database runs, and adds new users to the system. Plans and coordinates security measures -data integrity, backup systems, and database security.

Duties, Tasks, and Responsibilities

Answer users' inquiries regarding computer software and hardware operation to resolve problems.

Baseline and forecast server performance data and tunes server hardware and software configurations.

Conduct computer diagnostics to investigate and resolve problems and to provide technical assistance and support.

Conduct office automation feasibility studies, including workflow analysis, space design, or cost comparison analysis.

Confer with staff, users, and management to establish requirements for new systems or modifications.

Create and maintain monitor definitions and rules based upon requirements from Service Level Agreements (SLAs).

Ensure that proposed object definitions are clear, concise, technically correct, and that they represent singular concepts.

Ensure that services are provided with sufficient capacity to meet the business requirements.

Enter commands and observe system functioning to verify correct operations and detect errors.

Evaluate proposed objects and their attributes.

Inspect equipment and read order sheets to prepare for delivery to users.

Install and configure database environments and associated storage systems.

Install and perform minor repairs to hardware, software, and peripheral equipment, following design or installation specifications.

Maintain record of daily data communication transactions, problems and remedial action taken, and installation activities.

Manage, monitor and administer database system performance and schedule activities.

Modify and customize commercial programs for internal needs.

Monitor and conduct advanced analysis of output and performance of management of systems according to prescribed standards.

Oversee the daily performance of computer systems.

Perform backups/restores, and archive data.

Perform optimization and tuning of data loads and extractions.

Perform server and storage capacity management and planning for the most complex and critical systems.

Perform server performance tuning.

Plan and test capacity requirements.

Plan for transition of the development and/or production environment to new technology.

Prepare evaluations of software or hardware, and recommend improvements or upgrades.

Provide technical support in the evaluation of prime object names, data elements, and other objects.

Read trade magazines and technical manuals, or attend conferences and seminars to maintain knowledge of hardware and software.

Recommend and implement process and tool improvements to improve the efficiency and effectiveness of the organization's change management and configuration management processes and systems.

Recommend and plan server recapitalization.

Recommend appropriate procedure, query or package changes and optimizations to ensure and improve system performance and reliability.

Set up equipment for employee use, performing or ensuring proper installation of cable, operating systems, and appropriate software.

Study system requirements to determine proper server installation methods and procedures.

Utilize system software to monitor the performance of system files; manages system data to maintain performance efficiencies.

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Data Models — Experience interpreting data models and developing database structures; using standard diagramming techniques to design and develop computer data models; and implementing and troubleshooting programming changes and modifications.

Database — Supporting the TeamPlay® application with data input to very sophisticated DBA support of databases like Oracle

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Security — Knowledge of security requirements for databases, developing, documenting, and implementing backup and recovery procedures.

Speaking — Talking to others to convey information effectively

Systems Environment — Experience configuring, managing and maintaining the operation of complex relational databases; familiarity with UNIX and Windows operating systems.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server, Database models

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server, Database models

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Database Developer - Developmental

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 10/5/2012

Standard Occupational Code:
 [15-1141] Database Administrators

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. The Database Developer works with software and determines ways to organize and store data. Identify user requirements, set up computer databases, and test and coordinate modifications to the computer database systems Ensures the performance of the system, understands the platform on which the database runs, and adds new users to the system. Plans and coordinates security measures -data integrity, backup systems, and database security. Provides technical assistance to computer system users. Answers questions or resolve computer problems for clients in person, via telephone or from remote location. May provide assistance concerning the use of computer hardware and software, including printing, installation, word-processing, electronic mail, and operating systems. Provides technical expertise in the use of Database Management System (DBMS). Evaluates and recommends available DBMS products to support validated user requirements. Defines file organization, indexing methods, and security procedures for specific user applications. Manages the development of data base projects. Plans and budgets staff and data base resources. When necessary, reallocates resources to maximize benefits.

The Database Developer is responsible for capacity planning. Provides support for implementation, troubleshooting and maintenance of IT systems. Manages IT system infrastructure and any processes related to these systems. Provides support to IT systems including: day-to-day operations, monitoring and problem resolution for all of the client problems. Provides second level problem identification, diagnosis and resolution of problems. Provides support for the dispatch system and hardware problems and remain involved in the resolution process. Provides support for the escalation and communication of status to management and internal customers. Coordinates changes to computer databases, test and implement the database applying knowledge of database management systems. Plans, coordinates, and implements security measures to safeguard computer databases. Responsible for operations related to systems management software. Installs and maintains software monitors and conducts advanced analysis of output and performance.

Short Summary:

The Database Developer is responsible for capacity planning. Provides support for implementation, troubleshooting and maintenance of IT systems. Manages IT system infrastructure and any processes related to these systems. Provides support to IT systems including: day-to-day operations, monitoring and problem resolution for all of the client problems.

Duties, Tasks, and Responsibilities

  Answer users' inquiries regarding computer software and hardware operation to resolve problems.

Conduct office automation feasibility studies, including workflow analysis, space design, or cost comparison analysis.

Confer with staff, users, and management to establish requirements for new systems or modifications.

Create and maintain and monitor definitions and rules based upon requirements from Service Level Agreements (SLAs).

Develop training materials and procedures, or train users in the proper use of hardware or software.

Ensure that proposed object definitions are clear, concise, technically correct, and that they represent singular concepts.

Ensure that services are provided with sufficient capacity to meet the business requirements.

Enter commands and observe system functioning to verify correct operations and detect errors.

Evaluate proposed objects and their attributes.

Inspect equipment and read order sheets to prepare for delivery to users.

Install and configure database environments and associated storage systems.

Install and perform minor repairs to hardware, software, and peripheral equipment, following design or installation specifications.

Maintain record of daily data communication transactions, problems and remedial action taken, and installation activities.

Manage, monitor and administer database system performance and schedule activities.

Modify and customize commercial programs for internal needs.

Monitor and conduct advanced analysis of output and performance of management of systems according to prescribed standards.

Oversee the daily performance of computer systems.

Perform backups/restores, and archive data.

Perform optimization and tuning of data loads and extractions.

Perform server and storage capacity management and planning for the most complex and critical systems.

Plan and test capacity requirements.

Plan for transition of the development and/or production environment to new technology.

Prepare evaluations of software or hardware, and recommend improvements or upgrades.

Provide technical support in the evaluation of prime object names, data elements, and other objects.

Read trade magazines and technical manuals, or attend conferences and seminars to maintain knowledge of hardware and software.

Recommend and implement process and tool improvements to improve the efficiency and effectiveness of the organization's change management and configuration management processes and systems

Recommend and plan server recapitalization. Perform server performance tuning. Baselines and forecasts server performance data and tunes server hardware and software configurations.

Recommend appropriate procedure, query or package changes and optimizations to ensure and improve system performance and reliability.

Refer major hardware or software problems or defective products to vendors or technicians for service.

Set up equipment for employee use, performing or ensuring proper installation of cable, operating systems, and appropriate software.

Study system requirements to determine proper server installation methods and procedures. May provide 24x7 operational support.

Supervise and coordinate workers engaged in problem solving, monitoring, and installing data communication equipment and software.

Utilize system software to monitor the performance of system files; manages system data to maintain performance efficiencies.

• Conduct computer diagnostics to investigate and resolve problems and to provide technical assistance and support.

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Data Models — Experience interpreting data models and developing database structures; using standard diagramming techniques to design and develop computer data models; and implementing and troubleshooting programming changes and modifications.

Database — Supporting the TeamPlay® application with data input to very sophisticated DBA support of databases like Oracle

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Security — Knowledge of security requirements for databases, developing, documenting, and implementing backup and recovery procedures.

Speaking — Talking to others to convey information effectively.

Systems Environment — Experience configuring, managing and maintaining the operation of complex relational databases; familiarity with UNIX and Windows operating systems.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server, Database models

• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server, Database models

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Database Developer - Manager

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. The Database Developer works with software and determines ways to organize and store data. Identify user requirements, set up computer databases, and test and coordinate modifications to the computer database systems Ensures the performance of the system, understands the platform on which the database runs, and adds new users to the system. Plans and coordinates security measures -data integrity, backup systems, and database security. Provides technical assistance to computer system users. Answers questions or resolve computer problems for clients in person, via telephone or from remote location. May provide assistance concerning the use of computer hardware and software, including printing, installation, word-processing, electronic mail, and operating systems. Provides technical expertise in the use of Database Management System (DBMS). Evaluates and recommends available DBMS products to support validated user requirements. Defines file organization, indexing methods, and security procedures for specific user applications. Manages the development of data base projects. Plans and budgets staff and data base resources. When necessary, reallocates resources to maximize benefits.

The Database Developer is responsible for capacity planning. Provides support for implementation, troubleshooting and maintenance of IT systems. Manages IT system infrastructure and any processes related to these systems. Provides support to IT systems including: day-to-day operations, monitoring and problem resolution for all of the client problems. Provides second level problem identification, diagnosis and resolution of problems. Provides support for the dispatch system and hardware problems and remain involved in the resolution process. Provides support for the escalation and communication of status to management and internal customers. Coordinates changes to computer databases, test and implement the database applying knowledge of database management systems. Plans, coordinates, and implements security measures to safeguard computer databases. Responsible for operations related to systems management software. Installs and maintains software monitors and conducts advanced analysis of output and performance.

Short Summary:

The Database Developer is responsible for capacity planning. Provides support for implementation, troubleshooting and maintenance of IT systems. Manages IT system infrastructure and any processes related to these systems. Provides support to IT systems including: day-to-day operations, monitoring and problem resolution for all of the client problems.

Duties, Tasks, and Responsibilities

  Answer users' inquiries regarding computer software and hardware operation to resolve problems.

Conduct computer diagnostics to investigate and resolve problems and to provide technical assistance and support.

Conduct office automation feasibility studies, including workflow analysis, space design, or cost comparison analysis.

Confer with staff, users, and management to establish requirements for new systems or modifications.

Create and maintain and monitor definitions and rules based upon requirements from Service Level Agreements (SLAs).

Develop training materials and procedures, or train users in the proper use of hardware or software.

Ensure that proposed object definitions are clear, concise, technically correct, and that they represent singular concepts.

Ensure that services are provided with sufficient capacity to meet the business requirements.

Enter commands and observe system functioning to verify correct operations and detect errors.

Evaluate proposed objects and their attributes.

Inspect equipment and read order sheets to prepare for delivery to users.

Install and configure database environments and associated storage systems.

Install and perform minor repairs to hardware, software, and peripheral equipment, following design or installation specifications.

Maintain record of daily data communication transactions, problems and remedial action taken, and installation activities.

Manage, monitor and administer database system performance and schedule activities.

Modify and customize commercial programs for internal needs.

Monitor and conduct advanced analysis of output and performance of management of systems according to prescribed standards.

Oversee the daily performance of computer systems.

Perform backups/restores, and archive data.

Perform optimization and tuning of data loads and extractions.

Perform server and storage capacity management and planning for the most complex and critical systems.

Plan and test capacity requirements.

Plan for transition of the development and/or production environment to new technology.

Prepare evaluations of software or hardware, and recommend improvements or upgrades.

Provide technical support in the evaluation of prime object names, data elements, and other objects.

Read trade magazines and technical manuals, or attend conferences and seminars to maintain knowledge of hardware and software.

Recommend and implement process and tool improvements to improve the efficiency and effectiveness of the organization's change management and configuration management processes and systems

Recommend and plan server recapitalization. Perform server performance tuning. Baselines and forecasts server performance data and tunes server hardware and software configurations.

Recommend appropriate procedure, query or package changes and optimizations to ensure and improve system performance and reliability.

Refer major hardware or software problems or defective products to vendors or technicians for service.

Set up equipment for employee use, performing or ensuring proper installation of cable, operating systems, and appropriate software.

Study system requirements to determine proper server installation methods and procedures. May provide 24x7 operational support.

Supervise and coordinate workers engaged in problem solving, monitoring, and installing data communication equipment and software.

Utilize system software to monitor the performance of system files; manages system data to maintain performance efficiencies.

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Data Models — Experience interpreting data models and developing database structures; using standard diagramming techniques to design and develop computer data models; and implementing and troubleshooting programming changes and modifications.

Database — Supporting the TeamPlay® application with data input to very sophisticated DBA support of databases like Oracle

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Security — Knowledge of security requirements for databases, developing, documenting, and implementing backup and recovery procedures.

Speaking — Talking to others to convey information effectively.

Systems Environment — Experience configuring, managing and maintaining the operation of complex relational databases; familiarity with UNIX and Windows operating systems.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server, Database models

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server, Database models

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Disaster Recovery Engineer - Developmental

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:
[15-1120] Computer and Information Analysts
[17-2060] Computer Hardware Engineers

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Responsible for maintenance and continuous improvement of the process, working methods and tools, including configuration management of computer systems, networks and their configurations, workstations and their configuration, software development activity, performance tool development and distribution, and applications distribution. Configuration change tracking and documentation control to include, but not limited to concepts of operation, requirements identification and documentation, preliminary and detailed system definition, system design review, performance monitoring tools and production software. Ensure the CM process is introduced and implemented according to guidelines from the process owner. Keep the Configuration Management Database (CMDB) update. Perform audits on the actual CMDB.
Provides continuous coordination of progress on actions, tasking, and issues. Reviews and edits technical documentation, as requested. Serves as a corporate referent on technical writing and editing matters. Serves as the CM authority for reviewing software code deliveries and managing code libraries.

Short Summary:

Responsible for maintenance and continuous improvement of the process, working methods and tools, including configuration management of computer systems, networks and their configurations, workstations and their configuration, software development activity, performance tool development and distribution, and applications distribution. Configuration change tracking and documentation control to include, but not limited to concepts of operation, requirements identification and documentation, preliminary and detailed system definition, system design review, performance monitoring tools and production software. Ensure the CM process is introduced and implemented according to guidelines from the process owner. Keep the Configuration Management Database (CMDB) update. Perform audits on the actual CMDB.
Provides continuous coordination of progress on actions, tasking, and issues. Reviews and edits technical documentation, as requested. Serves as a corporate referent on technical writing and editing matters. Serves as the CM authority for reviewing software code deliveries and managing code libraries.

Duties, Tasks, and Responsibilities

Configure and monitor audit files for security issues.

Configure and monitor various Web search engines.

Configure and report statistics concerning Web site usage.

Ensure adherence of CM processes throughout life cycle development phases

Ensure overall Web site quality assurance to include properly formatted metadata, common look and feel pages, and navigation buttons.

Evaluate new Web authoring tools or products.

Implement approved changes to CMDB structure including attributes and relationships.

Improve and develop the process, working methods and tools.

Liaise with the customer to ensure requirements are met and ensure the CMDB integrity.

Maintain the configuration management database (CMDB) and maintain system documentation.

Maintain the master project schedule.

Manage a website.

Manage and document the configuration baseline and control process for applications

Manage and track changes to project baselines, as well as regularly track project and master schedule and control gate progress.

Manage the baseline configuration for all-project related work for project oversight as well as office-level oversight and control.

Manage the configuration of software executables to environments (development, test, staging and production)

Oversees and reviews the testing and implementation of data systems, software and data networks to ensure that the integrity and security of all electronic data and data systems are adequately protected.

Plan a schedule of independent audits and perform audits on the CMDB, comparing its contents with the actual IT infrastructure.

Process on a regular cycle discrepancy reports, requirements, build reports, investigation reports, request for changes, operation change requests. Assist in changes to the CM process, responsible for establishing and maintaining both new and existing schedules.

Produce and issue managements reports from CMDB.

Provide executive support to the Configuration Management Board, including scheduling meetings, developing agenda, assisting project managers who are on the agenda and assisting the Chair to run the meetings.

Provide reports and repairs broken links.

Provide support at meetings, enter or updates configuration tracking information in appropriate databases, develop board agendas, notify board attendees of meetings, enter board related data in appropriate databases, install, maintain and troubleshoots problems related to Configuration Control Board action items/issues.

Record and report the change process and implementation status for applications

Record and track Action Items

Report status of Action Items

Report status of CRs, DRs and RFCs

Support project teams in defining, documenting, and changing and baselining project configuration items.

Track and monitor status of Change Requests (CRs), Discrepancy Reports (DRs) and Request For Changes (RFCs)

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Serves as a corporate referent on technical writing and editing matters. Serves as the CM authority for reviewing software code deliveries and managing code libraries.

Short Summary:

Responsible for maintenance and continuous improvement of the process, working methods and tools, including configuration management of computer systems, networks and their configurations, workstations and their configuration, software development activity, performance tool development and distribution, and applications distribution. Configuration change tracking and documentation control to include, but not limited to concepts of operation, requirements identification and documentation, preliminary and detailed system definition, system design review, performance monitoring tools and production software. Ensure the CM process is introduced and implemented according to guidelines from the process owner. Keep the Configuration Management Database (CMDB) update. Perform audits on the actual CMDB.
Provides continuous coordination of progress on actions, tasking, and issues. Reviews and edits technical documentation, as requested. Serves as a corporate referent on technical writing and editing matters. Serves as the CM authority for reviewing software code deliveries and managing code libraries.

Duties, Tasks, and Responsibilities

Configure and monitor audit files for security issues.

Configure and monitor various Web search engines.

Configure and report statistics concerning Web site usage.

Ensure adherence of CM processes throughout life cycle development phases

Ensure overall Web site quality assurance to include properly formatted metadata, common look and feel pages, and navigation buttons.

Evaluate new Web authoring tools or products.

Implement approved changes to CMDB structure including attributes and relationships.

Improve and develop the process, working methods and tools.

Liaise with the customer to ensure requirements are met and ensure the CMDB integrity.

Maintain the configuration management database (CMDB) and maintain system documentation.

Maintain the master project schedule.

Manage a website.

Manage and document the configuration baseline and control process for applications

Manage and track changes to project baselines, as well as regularly track project and master schedule and control gate progress.

Manage the baseline configuration for all-project related work for project oversight as well as office-level oversight and control.

Manage the configuration of software executables to environments (development, test, staging and production)

Oversees and reviews the testing and implementation of data systems, software and data networks to ensure that the integrity and security of all electronic data and data systems are adequately protected.

Plan a schedule of independent audits and perform audits on the CMDB, comparing its contents with the actual IT infrastructure.

Process on a regular cycle discrepancy reports, requirements, build reports, investigation reports, request for changes, operation change requests. Assist in changes to the CM process, responsible for establishing and maintaining both new and existing schedules.

Produce and issue managements reports from CMDB.

Provide executive support to the Configuration Management Board, including scheduling meetings, developing agenda, assisting project managers who are on the agenda and assisting the Chair to run the meetings.

Provide reports and repairs broken links.

Provide support at meetings, enter or updates configuration tracking information in appropriate databases, develop board agendas, notify board attendees of meetings, enter board related data in appropriate databases, install, maintain and troubleshoots problems related to Configuration Control Board action items/issues.

Record and report the change process and implementation status for applications

Record and track Action Items

Report status of Action Items

Report status of CRs, DRs and RFCs

Support project teams in defining, documenting, and changing and baselining project configuration items.

Track and monitor status of Change Requests (CRs), Discrepancy Reports (DRs) and Request For Changes (RFCs)

Knowledge, Skills, and Abilities

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Development environment software — C; Microsoft Visual Basic; Prolog; Restructured extended executor REXX

Metadata management software — AllFusion ERwin Data Modeler; Data modeling software; IBM Rational Data Architect; Visual Paradigm DB Visual ARCHITECT

Object or component oriented development software — Microsoft Visual C# .NET; Practical extraction and reporting language Perl; Sun Microsystems Java; Sybase PowerBuilder

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Notebook computers

Tape arrays — Tape libraries

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Disaster Recovery Engineer - Senior

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:
[15-1120] Computer and Information Analysts
[17-2060] Computer Hardware Engineers
[15-1120] Computer and Information Analysts
[17-2060] Computer Hardware Engineers

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Responsible for maintenance and continuous improvement of the process, working methods and tools, including configuration management of computer systems, networks and their configurations, workstations and their configuration, software development activity, performance tool development and distribution, and applications distribution. Configuration change tracking and documentation control to include, but not limited to concepts of operation, requirements identification and documentation, preliminary and detailed system definition, system design review, performance monitoring tools and production software. Ensure the CM process is introduced and implemented according to guidelines from the process owner. Keep the Configuration Management Database (CMDB) update. Perform audits on the actual CMDB.
Provides continuous coordination of progress on actions, tasking, and issues. Reviews and edits technical documentation, as requested. Serves as a corporate referent on technical writing and editing matters. Serves as the CM authority for reviewing software code deliveries and managing code libraries.

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Backup or archival software — Acronis Recovery Expert; Backup and archival software; Systems and data disaster recovery software; VERITAS NetBackup

Data base management system software — Database management software; Microsoft SQL Server; Quest Central; Sybase Replication Server

Documentation Specialist - Developmental

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:
 [15-1120] Computer and Information Analysts

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Gathers, analyzes, and composes technical information. Conducts research and ensures the use of proper technical terminology. Translates technical information into clear, readable documents to be used by technical and non-technical personnel. Supports the development of all types of documents and reports by developing and updating graphics presentations to improve the quality and enhance the usability of these documents. Responsible for integrating the graphics generated with automated tools and the deliverable documents.

Short Summary:

Gathers, analyzes, and composes technical information. Conducts research and ensures the use of proper technical terminology. Translates technical information into clear, readable documents to be used by technical and non-technical personnel. Supports the development of all types of documents and reports by developing and updating graphics presentations to improve the quality and enhance the usability of these documents. Responsible for integrating the graphics generated with automated tools and the deliverable documents.

Duties, Tasks, and Responsibilities

Compose technical documents including, user's manuals, training materials, installation guides, proposals, and reports.

Conduct research and ensure the use of proper technical terminology.

Edit functional descriptions, system specifications, user's manuals, special reports, or any other customer deliverables and documents.

Organize material and complete writing assignment according to set standards regarding order, conciseness, style, and terminology.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Learning Strategies — Selecting and using training/instructional methods and procedures appropriate for the situation when learning or teaching new things.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Time Management — Managing one's own time and the time of others.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Data base management system software — Author-it; Oracle Business Intelligence Discoverer; Oracle software; Talisma Knowledgebase

Desktop publishing software — Adobe Systems Adobe FrameMaker; Adobe Systems Adobe InDesign; Corel Ventura; PTC Arbortext

Development environment software — Darwin information typing architecture DITA; Extensible markup language XML; Microsoft Visual Basic; Standardized general markup language SGML

Graphics or photo imaging software — Adobe Systems Adobe Illustrator; Adobe Systems Adobe Photoshop software; Corel CorelDraw Graphics Suite; Corel Paint Shop Pro

Web platform development software — Hypertext markup language HTML; JavaScript; Microsoft ASP.NET; Sun Microsystems Java server pages JSP

Tools

Desktop computers

High capacity removable media drives — Universal serial bus USB flash drives

Notebook computers — Laptop computers

Personal computers

Scanners — Computer data input scanners

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Documentation Specialist - Expert

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Gathers, analyzes, and composes technical information. Conducts research and ensures the use of proper technical terminology. Translates technical information into clear, readable documents to be used by technical and non-technical personnel. Supports the development of all types of documents and reports by developing and updating graphics presentations to improve the quality and enhance the usability of these documents. Responsible for integrating the graphics generated with automated tools and the deliverable documents.

Short Summary:

Gathers, analyzes, and composes technical information. Conducts research and ensures the use of proper technical terminology. Translates technical information into clear, readable documents to be used by technical and non-technical personnel. Supports the development of all types of documents and reports by developing and updating graphics presentations to improve the quality and enhance the usability of these documents. Responsible for integrating the graphics generated with automated tools and the deliverable documents.

Duties, Tasks, and Responsibilities

Compose technical documents including, user's manuals, training materials, installation guides, proposals, and reports.

Conduct research and ensure the use of proper technical terminology.

Edit functional descriptions, system specifications, user's manuals, special reports, or any other customer deliverables and documents.

Organize material and complete writing assignment according to set standards regarding order, conciseness, style, and terminology.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Learning Strategies — Selecting and using training/instructional methods and procedures appropriate for the situation when learning or teaching new things.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Time Management — Managing one's own time and the time of others.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Edit functional descriptions, system specifications, user's manuals, special reports, or any other customer deliverables and documents.

Organize material and complete writing assignment according to set standards regarding order, conciseness, style, and terminology.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Learning Strategies — Selecting and using training/instructional methods and procedures appropriate for the situation when learning or teaching new things.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speech Clarity — The ability to speak clearly so others can understand you.

Time Management — Managing one's own time and the time of others.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Data base management system software — Author-it; Oracle Business Intelligence Discoverer; Oracle software; Talisma Knowledgebase

Desktop publishing software — Adobe Systems Adobe FrameMaker; Adobe Systems Adobe InDesign; Corel Ventura; PTC Arbortext

Development environment software — Darwin information typing architecture DITA; Extensible markup language XML; Microsoft Visual Basic; Standardized general markup language SGML

Graphics or photo imaging software — Adobe Systems Adobe Illustrator; Adobe Systems Adobe Photoshop software; Corel CorelDraw Graphics Suite; Corel Paint Shop Pro

Web platform development software — Hypertext markup language HTML; JavaScript; Microsoft ASP.NET; Sun Microsystems Java server pages JSP

Tools

Desktop computers

High capacity removable media drives — Universal serial bus USB flash drives

Notebook computers — Laptop computers

Personal computers

Scanners — Computer data input scanners

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Field Engineer - Developmental

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:
 [15-1190] Miscellaneous Computer Occupations

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Performs applied research, development, and design of underground outside plant (OSP) conduit infrastructure and fiber optic cabling. Manages and coordinates OSP fiber optic projects from design through as-built delivery. Supervises all aspects of outside plant installation, maintenance, restoration, and fiber locations. Ensures adherence to installation standards, restoration procedures, and sound engineering practices. Provides quality checks on the work performed by OSP technicians. Responds to the Network Services Operations Center (NSOC) to resolve outages, anomalies, and issues related to the network fiber infrastructure.

Short Summary:

Performs applied research, development, and design of underground outside plant (OSP) conduit infrastructure and fiber optic cabling. Manages and coordinates OSP fiber optic projects from design through as-built delivery. Supervises all aspects of outside plant installation, maintenance, restoration, and fiber locations. Ensures adherence to installation standards, restoration procedures, and sound engineering practices. Provides quality checks on the work performed by OSP technicians. Responds to the Network Services Operations Center (NSOC) to resolve outages, anomalies, and issues related to the network fiber infrastructure.

Duties, Tasks, and Responsibilities

Analyze Optical Time Domain Reflectometer (OTDR) traces, evaluate characteristics of fiber, and document test results.

Communicate verbally with construction subcontractors regarding proper procedures for placement of outside cable plant.

Coordinate subcontractors, materials, inspectors, tools, and equipment to complete projects on schedule and within budget.

Make running line changes in accordance with (IAW) local regulations (e.g., city, county, state, railroads).

Perform quality control of drawings and as-built prepared by computer-aided design (CAD) personnel.

Perform survey work, schedule planning and implementation, and quality control of permit drawings, construction drawings, and as built.

Prepare applications and drawings for right-of-way and construction permits.

Provide interpretation of plans, detail sheets, and specifications for subcontractors and inspectors.

Provides design, permitting, and field decisions applicable to OSP construction projects.

Review inspection reports and redline changes.

Review, analyze, and resolve field construction problems and discrepancies.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Arm-Hand Steadiness — The ability to keep your hand and arm steady while moving your arm or while holding your arm and hand in one position.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Equipment Maintenance — Performing routine maintenance on equipment and determining when and what kind of maintenance is needed.

Finger Dexterity — The ability to make precisely coordinated movements of the fingers of one or both hands to grasp, manipulate, or assemble very small objects.

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Mechanical — Knowledge of machines and tools, including their designs, uses, repair, and maintenance.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Analytical or scientific software — Mentor Graphics ModelSim; Root cause analysis software; The Mathworks MATLAB

Computer aided design CAD software — Cadence software; MicroSim Pspice; Prentice Hall Electronic Workbench MultiSim

Data base user interface and query software — Database software; Microsoft Access

Development environment software — C; Microsoft Visual Basic; National Instruments LabVIEW; Verilog

Spreadsheet software — Microsoft Excel

Tools

Electronic measuring probes — Current probes; Voltage probes

Multimeters — Signal measuring equipment

Soldering irons or guns — Soldering equipment

Soldering or desoldering or combined stations — Soldering stations

Voltage or current meters — Digital voltmeters DVM; Voltage testers

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Equipment Maintenance — Performing routine maintenance on equipment and determining when and what kind of maintenance is needed.

Finger Dexterity — The ability to make precisely coordinated movements of the fingers of one or both hands to grasp, manipulate, or assemble very small objects.

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Mechanical — Knowledge of machines and tools, including their designs, uses, repair, and maintenance.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Analytical or scientific software — Mentor Graphics ModelSim; Root cause analysis software; The Mathworks MATLAB

Computer aided design CAD software — Cadence software; MicroSim Pspice; Prentice Hall Electronic Workbench MultiSim

Data base user interface and query software — Database software; Microsoft Access

Development environment software — C; Microsoft Visual Basic; National Instruments LabVIEW; Verilog

Spreadsheet software — Microsoft Excel

Tools

Electronic measuring probes — Current probes; Voltage probes

Multimeters — Signal measuring equipment

Soldering irons or guns — Soldering equipment

Soldering or desoldering or combined stations — Soldering stations

Voltage or current meters — Digital voltmeters DVM; Voltage testers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Field Engineer - Senior

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:
 [15-1190] Miscellaneous Computer Occupations

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Performs applied research, development, and design of underground outside plant (OSP) conduit infrastructure and fiber optic cabling. Manages and coordinates OSP fiber optic projects from design through as-built delivery. Supervises all aspects of outside plant installation, maintenance, restoration, and fiber locations. Ensures adherence to installation standards, restoration procedures, and sound engineering practices. Provides quality checks on the work performed by OSP technicians. Responds to the Network Services Operations Center (NSOC) to resolve outages, anomalies, and issues related to the network fiber infrastructure.

Short Summary:

Performs applied research, development, and design of underground outside plant (OSP) conduit infrastructure and fiber optic cabling. Manages and coordinates OSP fiber optic projects from design through as-built delivery. Supervises all aspects of outside plant installation, maintenance, restoration, and fiber locations. Ensures adherence to installation standards, restoration procedures, and sound engineering practices. Provides quality checks on the work performed by OSP technicians. Responds to the Network Services Operations Center (NSOC) to resolve outages, anomalies, and issues related to the network fiber infrastructure.

Duties, Tasks, and Responsibilities

Analyze Optical Time Domain Reflectometer (OTDR) traces, evaluate characteristics of fiber, and document test results.

Communicate verbally with construction subcontractors regarding proper procedures for placement of outside cable plant.

Coordinate subcontractors, materials, inspectors, tools, and equipment to complete projects on schedule and within budget.

Make running line changes in accordance with (IAW) local regulations (e.g., city, county, state, railroads).

Perform quality control of drawings and as-built prepared by computer-aided design (CAD) personnel.

Perform survey work, schedule planning and implementation, and quality control of permit drawings, construction drawings, and as built.

Prepare applications and drawings for right-of-way and construction permits.

Provide interpretation of plans, detail sheets, and specifications for subcontractors and inspectors.

Provides design, permitting, and field decisions applicable to OSP construction projects.

Review inspection reports and redline changes.

Review, analyze, and resolve field construction problems and discrepancies.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Arm-Hand Steadiness — The ability to keep your hand and arm steady while moving your arm or while holding your arm and hand in one position.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Equipment Maintenance — Performing routine maintenance on equipment and determining when and what kind of maintenance is needed.

Finger Dexterity — The ability to make precisely coordinated movements of the fingers of one or both hands to grasp, manipulate, or assemble very small objects.

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Mechanical — Knowledge of machines and tools, including their designs, uses, repair, and maintenance.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Speech Clarity — The ability to speak clearly so others can understand you.

Speech Recognition — The ability to identify and understand the speech of another person.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Writing — Communicating effectively in writing as appropriate for the needs of the audience.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Analytical or scientific software — Mentor Graphics ModelSim; Root cause analysis software; The Mathworks MATLAB

Computer aided design CAD software — Cadence software; MicroSim Pspice; Prentice Hall Electronic Workbench MultiSim

Data base user interface and query software — Database software; Microsoft Access

Help Desk/Support Specialist - Developmental

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:
[15-1151] Computer User Support Specialists

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Responsible for recording incidents and providing support to the users. Provides a total customer support service as a single point of contact for all issues relating to IT and IS services for a particular customer. Provides technical assistance to computer system users, including the use of computer hardware and software, including printing, installation, word-processing, electronic mail, and operating systems. Maintains a service perspective including an understanding of relationships, dependencies and requirements of hardware and software components and the organizations that support them. Answers questions or resolve computer problems for clients in person, via telephone or from remote location. Provides assistance concerning the use of computer hardware and software, including printing, installation, word-processing, electronic mail, and operating systems.

Short Summary:

Responsible for recording incidents and providing support to the users. Provides a total customer support service as a single point of contact for all issues relating to IT and IS services for a particular customer. Provides technical assistance to computer system users, including the use of computer hardware and software, including printing, installation, word-processing, electronic mail, and operating systems. Maintains a service perspective including an understanding of relationships, dependencies and requirements of hardware and software components and the organizations that support them. Answers questions or resolve computer problems for clients in person, via telephone or from remote location. Provides assistance concerning the use of computer hardware and software, including printing, installation, word-processing, electronic mail, and operating systems.

Duties, Tasks, and Responsibilities

Answer users' inquiries regarding computer software and hardware operation to resolve problems, including requirements originating from a field location.

Approve, schedule, plan, and supervise the installation and testing of new products and improvements to computer systems such as the installation of new databases.

Coordinate deployment of workstation software, communications services and equipment, server replacements and upgrades, and other IT changes at the field location.

Coordinate site engineering plans, site surveys, and site installation Technical Design Packages.

Develop data model describing data elements and how they are used, following procedures and using pen, template or computer software.

Develop methods for integrating different products so they work properly together such as customizing commercial databases to fit specific needs.

Develop standards and guidelines to guide the use and acquisition of software and to protect vulnerable information.

Enter commands and observe system functioning to verify correct operations and detect errors.

Escalate incident reports to required groups and monitor as defined in SLA.

Establish and calculate optimum values for database parameters, using manuals and calculator. Specify users and user access levels for each segment of database.

Identify and evaluate industry trends in database systems to serve as a source of information and advice for upper management.

Install and perform minor repairs to hardware, software, and peripheral equipment, following design or installation specifications.

Maintain record of daily data communication transactions, problems and remedial action taken, and installation activities.

Modify existing databases and database management systems or direct programmers and analysts to make changes.

Monitor events and perform corrective actions according to documentation.

Oversee the daily performance of computer systems.

Participate in the deployment of applications and hardware impacting the current and proposed IT tools used in the field location.

Plan, coordinate and implement security measures to safeguard information in computer files against accidental or unauthorized damage, modification or disclosure.

Read technical manuals, confer with users, and conduct computer diagnostics to investigate and resolve problems and to provide technical assistance and support.

Review procedures in database management system manuals for making changes to database.

Review project requests describing database user needs to estimate time and cost required to accomplish project.

Review workflow charts developed by programmer analyst to understand tasks computer will perform, such as updating records.

Revise company definition of data as defined in data dictionary.

Select and enter codes to monitor database performance and to create production database.

Set up equipment for employee use, performing or ensuring proper installation of cable, operating systems, and appropriate software.

Test programs or databases, correct errors and make necessary modifications.

Train users and answer questions.

Update and communicate with users about problem progress.

Work as part of a project team to coordinate database development and determine project scope and limitations.

Write and code logical and physical database descriptions and specify identifiers of database to management system or direct others in coding descriptions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Instructing — Teaching others how to do something.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Speech Clarity — The ability to speak clearly so others can understand you.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Backup or archival software — Backup and archival software; Disaster recovery software; Microsoft Volume Shadow Copy Service; Symantec LiveState

Configuration management software — Automated installation software; Deployment software; Patch management software

Desktop communications software — CrossTec NetOp Remote Control; Remote control software; Stac Software ReachOut; Symantec pcAnywhere

Internet directory services software — Active directory software; Domain name system DNS software; Network directory services software

Operating system software — Event log monitor software; Microsoft Windows Pre-installation Environment; Operating system monitoring software; Personal computer diagnostic software

Tools

Floppy disks — MS-DOS-bootable disks

Hard disk arrays — Redundant array of independent disks RAID systems

Power meters

Reflectometers

Tape arrays — Digital tapes

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Duties, Tasks, and Responsibilities

Answer users' inquiries regarding computer software and hardware operation to resolve problems, including requirements originating from a field location.

Approve, schedule, plan, and supervise the installation and testing of new products and improvements to computer systems such as the installation of new databases.

Coordinate deployment of workstation software, communications services and equipment, server replacements and upgrades, and other IT changes at the field location.

Coordinate site engineering plans, site surveys, and site installation Technical Design Packages.

Develop data model describing data elements and how they are used, following procedures and using pen, template or computer software.

Develop methods for integrating different products so they work properly together such as customizing commercial databases to fit specific needs.

Develop standards and guidelines to guide the use and acquisition of software and to protect vulnerable information.

Enter commands and observe system functioning to verify correct operations and detect errors.

Escalate incident reports to required groups and monitor as defined in SLA.

Establish and calculate optimum values for database parameters, using manuals and calculator. Specify users and user access levels for each segment of database.

Identify and evaluate industry trends in database systems to serve as a source of information and advice for upper management.

Install and perform minor repairs to hardware, software, and peripheral equipment, following design or installation specifications.

Maintain record of daily data communication transactions, problems and remedial action taken, and installation activities.

Modify existing databases and database management systems or direct programmers and analysts to make changes.

Monitor events and perform corrective actions according to documentation.

Oversee the daily performance of computer systems.

Participate in the deployment of applications and hardware impacting the current and proposed IT tools used in the field location.

Plan, coordinate and implement security measures to safeguard information in computer files against accidental or unauthorized damage, modification or disclosure.

Read technical manuals, confer with users, and conduct computer diagnostics to investigate and resolve problems and to provide technical assistance and support.

Review procedures in database management system manuals for making changes to database.

Review project requests describing database user needs to estimate time and cost required to accomplish project.

Review workflow charts developed by programmer analyst to understand tasks computer will perform, such as updating records.

Revise company definition of data as defined in data dictionary.

Select and enter codes to monitor database performance and to create production database.

Set up equipment for employee use, performing or ensuring proper installation of cable, operating systems, and appropriate software.

Test programs or databases, correct errors and make necessary modifications.

Train users and answer questions.

Update and communicate with users about problem progress.

Work as part of a project team to coordinate database development and determine project scope and limitations.

Write and code logical and physical database descriptions and specify identifiers of database to management system or direct others in coding descriptions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Instructing — Teaching others how to do something.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Speech Clarity — The ability to speak clearly so others can understand you.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Backup or archival software — Backup and archival software; Disaster recovery software; Microsoft Volume Shadow Copy Service; Symantec LiveState

Configuration management software — Automated installation software; Deployment software; Patch management software

Desktop communications software — CrossTec NetOp Remote Control; Remote control software; Stac Software ReachOut; Symantec pcAnywhere

Internet directory services software — Active directory software; Domain name system DNS software; Network directory services software

Operating system software — Event log monitor software; Microsoft Windows Pre-installation Environment; Operating system monitoring software; Personal computer diagnostic software

Tools

Floppy disks — MS-DOS-bootable disks

Hard disk arrays — Redundant array of independent disks RAID systems

Power meters

Reflectometers

Tape arrays — Digital tapes

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Help Desk/Support Specialist - Full Performance

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:
 [15-1151] Computer User Support Specialists

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Responsible for recording incidents and providing support to the users. Provides a total customer support service as a single point of contact for all issues relating to IT and IS services for a particular customer. Provides technical assistance to computer system users, including the use of computer hardware and software, including printing, installation, word-processing, electronic mail, and operating systems. Maintains a service perspective including an understanding of relationships, dependencies and requirements of hardware and software components and the organizations that support them. Answers questions or resolve computer problems for clients in person, via telephone or from remote location. Provides assistance concerning the use of computer hardware and software, including printing, installation, word-processing, electronic mail, and operating systems.

Duties, Tasks, and Responsibilities

Answer users' inquiries regarding computer software and hardware operation to resolve problems, including requirements originating from a field location.

Approve, schedule, plan, and supervise the installation and testing of new products and improvements to computer systems such as the installation of new databases.

Coordinate deployment of workstation software, communications services and equipment, server replacements and upgrades, and other IT changes at the field location.

Coordinate site engineering plans, site surveys, and site installation Technical Design Packages.

Develop data model describing data elements and how they are used, following procedures and using pen, template or computer software.

Develop methods for integrating different products so they work properly together such as customizing commercial databases to fit specific needs.

Develop standards and guidelines to guide the use and acquisition of software and to protect vulnerable information.

Enter commands and observe system functioning to verify correct operations and detect errors.

Escalate incident reports to required groups and monitor as defined in SLA.

Establish and calculate optimum values for database parameters, using manuals and calculator. Specify users and user access levels for each segment of database.

Identify and evaluate industry trends in database systems to serve as a source of information and advice for upper management.

Install and perform minor repairs to hardware, software, and peripheral equipment, following design or installation specifications.

Maintain record of daily data communication transactions, problems and remedial action taken, and installation activities.

Modify existing databases and database management systems or direct programmers and analysts to make changes.

Monitor events and perform corrective actions according to documentation.

Oversee the daily performance of computer systems.

Participate in the deployment of applications and hardware impacting the current and proposed IT tools used in the field location.

Plan, coordinate and implement security measures to safeguard information in computer files against accidental or unauthorized damage, modification or disclosure.

Read technical manuals, confer with users, and conduct computer diagnostics to investigate and resolve problems and to provide technical assistance and support.

Review procedures in database management system manuals for making changes to database.

Review project requests describing database user needs to estimate time and cost required to accomplish project.

Review workflow charts developed by programmer analyst to understand tasks computer will perform, such as updating records.

Revise company definition of data as defined in data dictionary.

Select and enter codes to monitor database performance and to create production database.

Set up equipment for employee use, performing or ensuring proper installation of cable, operating systems, and appropriate software.

Test programs or databases, correct errors and make necessary modifications.

Train users and answer questions.

Update and communicate with users about problem progress.

Work as part of a project team to coordinate database development and determine project scope and limitations.

Write and code logical and physical database descriptions and specify identifiers of database to management system or direct others in coding descriptions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Instructing — Teaching others how to do something.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Speech Clarity — The ability to speak clearly so others can understand you.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

Backup or archival software — Backup and archival software; Disaster recovery software; Microsoft Volume Shadow Copy Service; Symantec LiveState

Configuration management software — Automated installation software; Deployment software; Patch management software

Desktop communications software — CrossTec NetOp Remote Control; Remote control software; Stac Software ReachOut; Symantec pcAnywhere

Internet directory services software — Active directory software; Domain name system DNS software; Network directory services software

Operating system software — Event log monitor software; Microsoft Windows Pre-installation Environment; Operating system monitoring software; Personal computer diagnostic software

Tools

Floppy disks — MS-DOS-bootable disks

Hard disk arrays — Redundant array of independent disks RAID systems

Power meters

Reflectometers

Tape arrays — Digital tapes

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Help Desk/Support Specialist - Subject Matter Expert

Skill Community: Enterprise IT

Labor Group: Systems Engineer

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:
 [15-1151] Computer User Support Specialists

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Responsible for recording incidents and providing support to the users. Provides a total customer support service as a single point of contact for all issues relating to IT and IS services for a particular customer. Provides technical assistance to computer system users, including the use of computer hardware and software, including printing, installation, word-processing, electronic mail, and operating systems. Maintains a service perspective including an understanding of relationships, dependencies and requirements of hardware and software components and the organizations that support them. Answers questions or resolve computer problems for clients in person, via telephone or from remote location. Provides assistance concerning the use of computer hardware and software, including printing, installation, word-processing, electronic mail, and operating systems.

Short Summary:

Responsible for recording incidents and providing support to the users. Provides a total customer support service as a single point of contact for all issues relating to IT and IS services for a particular customer. Provides technical assistance to computer system users, including the use of computer hardware and software, including printing, installation, word-processing, electronic mail, and operating systems. Maintains a service perspective including an understanding of relationships, dependencies and requirements of hardware and software components and the organizations that support them. Answers questions or resolve computer problems for clients in person, via telephone or from remote location. Provides assistance concerning the use of computer hardware and software, including printing, installation, word-processing, electronic mail, and operating systems.

Duties, Tasks, and Responsibilities

Answer users' inquiries regarding computer software and hardware operation to resolve problems, including requirements originating from a field location.

Approve, schedule, plan, and supervise the installation and testing of new products and improvements to computer systems such as the installation of new databases.

Coordinate deployment of workstation software, communications services and equipment, server replacements and upgrades, and other IT changes at the field location.

Coordinate site engineering plans, site surveys, and site installation Technical Design Packages.

Develop data model describing data elements and how they are used, following procedures and using pen, template or computer software.

Develop methods for integrating different products so they work properly together such as customizing commercial databases to fit specific needs.

Develop standards and guidelines to guide the use and acquisition of software and to protect vulnerable information.

Enter commands and observe system functioning to verify correct operations and detect errors.

Escalate incident reports to required groups and monitor as defined in SLA.

Establish and calculate optimum values for database parameters, using manuals and calculator. Specify users and user access levels for each segment of database.

Identify and evaluate industry trends in database systems to serve as a source of information and advice for upper management.

Install and perform minor repairs to hardware, software, and peripheral equipment, following design or installation specifications.

Maintain record of daily data communication transactions, problems and remedial action taken, and installation activities.

Modify existing databases and database management systems or direct programmers and analysts to make changes.

Monitor events and perform corrective actions according to documentation.

Oversee the daily performance of computer systems.

Participate in the deployment of applications and hardware impacting the current and proposed IT tools used in the field location.

Plan, coordinate and implement security measures to safeguard information in computer files against accidental or unauthorized damage, modification or disclosure.

Read technical manuals, confer with users, and conduct computer diagnostics to investigate and resolve problems and to provide technical assistance and support.

Review procedures in database management system manuals for making changes to database.

Review project requests describing database user needs to estimate time and cost required to accomplish project.

Review workflow charts developed by programmer analyst to understand tasks computer will perform, such as updating records.

Revise company definition of data as defined in data dictionary.

Select and enter codes to monitor database performance and to create production database.

Set up equipment for employee use, performing or ensuring proper installation of cable, operating systems, and appropriate software.

Test programs or databases, correct errors and make necessary modifications.

Train users and answer questions.

Update and communicate with users about problem progress.

Work as part of a project team to coordinate database development and determine project scope and limitations.

Write and code logical and physical database descriptions and specify identifiers of database to management system or direct others in coding descriptions.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Instructing — Teaching others how to do something.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Speaking — Talking to others to convey information effectively.

Speech Clarity — The ability to speak clearly so others can understand you.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Written Expression — The ability to communicate information and ideas in writing so others will understand.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Technology

Backup or archival software — Backup and archival software; Disaster recovery software; Microsoft Volume Shadow Copy Service; Symantec LiveState

Configuration management software — Automated installation software; Deployment software; Patch management software

Information Management Officer - Developmental

Skill Community: Enterprise IT

Labor Group: Information Management

Job Classification: Contractor

Status: Active

Date Effective: 5/31/2012

Standard Occupational Code:
 [43-4190] Miscellaneous Information and Record Clerks

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Positions at this level have broad knowledge of the organization's information management governance process and the issues that impact electronic record keeping systems, filing systems, metadata, records retention and disposition, vital records, classification and control markings, etc. Positions manage office-level information management programs to ensure that information management systems meet corporate and customer business needs. Positions also assess problems and develop solutions to resolve complex issues, which promote efficiency and improve day-to-day information management operations. In addition, positions are expected to maintain currency on technical job knowledge through attending courses, seminars, workshops, etc. and by reading technical journals.

Based on assignment, positions may have information management responsibilities for both domestic and foreign locations, and the work may require travel to these locations approximately three times a year for up to two weeks at a time.

Based on assignment, positions may have information management responsibilities for both domestic and foreign locations, and the work may require travel to these locations approximately three times a year for up to two weeks at a time.

Duties, Tasks, and Responsibilities

Anticipates and assesses information management requirements for office start-ups, closures, and reorganizations.

Assesses the state of the office's records and mission needs to determine the feasibility of migrating to electronic information management systems; researches and identifies systems that will meet the needs of the office, legal and regulatory requirements, and can be supported by the office's technical infrastructure; presents recommendations to senior management with a cost-benefit analysis

Based on assignment, may be responsible for:
• Implements and assesses information management programs, procedures, and processes at both domestic and foreign locations.
• Profiles cable correspondence.
• Performs field compliance reviews to include monitoring compliance with emergency destruction policy and procedures
• Supervises and/or provides direction and guidance to developmental Information Management Officers and others involved in information management within the unit.
• Oversees the work of subordinates to ensure that work is performed in an accurate and timely fashion.
• Provides advice, guidance, and instruction to subordinates on information management processes, policy interpretation, workflow, and directorate/MSO priorities.
• Establishes performance objectives and standards; assists subordinates in setting individual goals.
• Assesses the performance and skills of subordinates; provides performance and developmental feedback on an ongoing basis; provides input to formal performance appraisal.
• Performs other ad hoc duties as assigned.

Communicates the information management program within the office to ensure that personnel are aware of their information management responsibilities.

Conducts evaluations and compliance reviews regarding the office's record keeping system and procedures; analyzes information management processes to identify shortcomings; raises issues and makes recommendations to senior management; initiates corrective action to improve efficiency.

Conducts records and information system inventories/audits and assists managers in developing, documenting, and disseminating adequate and proper record keeping requirements.

Coordinates efforts to dispose of information within information systems in accordance with approved policy.

Determines what office's records are "vital records" (records that must be retained in a secure location in the event of a natural or other disaster).

Develops instructional material and delivers training to office personnel.

Develops strategies to communicate to customers the value and business importance of information management (IM) and the technical systems deployed in support of IM functions.

Gathers, analyzes, and presents data and recommendations regarding the record holdings of the office under general supervision.

Guides/assists in the implementation of office-level file plans.

Identifies and resolves information management-related issues as they pertain to automated information systems.

Identifies innovative approaches and initiatives to increase information management awareness.

Manages office-level information management programs under general supervision to ensure the business needs of the organization are met while all policies, transactions, functions, decisions, and procedures are properly documented and preserved, and legal and regulatory requirements are met.

Prepares program awareness materials

Provides advice and guidance to office managers and employees on a range of complex information management issues under general supervision (e.g., identification and control of proprietary information; records disposition; transfer and retrieval of archived information; implementation of information management standards; electronic records certification, etc.)

Provides information management guidance to systems developers and program managers.

Validates the preparation and transfer of temporary and permanent electronic and paper records to electronic or physical repositories (i.e., records center); provides guidance to office personnel on procedures to retrieve archived information.

Knowledge, Skills, and Abilities

Considerable customer service skills, demonstrated by anticipating and responding to customers' needs in a manner that provides added value and generates customer satisfaction, even in situations in which the outcome is not what the customer desired.

Considerable interpersonal skills, demonstrated by developing relationships and networks with directorate/office managers and employees

Considerable knowledge of a wide range of technical methods, principles, and practices in automated data processing as it relates to information management, control, storage, and retrieval; ability to apply this knowledge to evaluate existing digital, micrographic, and manual systems to examine their effectiveness, and when it is appropriate to upgrade an existing system or to employ less sophisticated methods and less costly equipment.

Considerable knowledge of the Intelligence Community and CIA mission, collection and production priorities, and strategic direction.

Considerable knowledge of the components' operations/mission, business functions, records, and record keeping systems.

Considerable knowledge of the functions, processes, and principles of information management and of the methods used to gather, analyze, and evaluate information management issues

Considerable knowledge of the operation of automated systems and the ability to apply this knowledge to assess whether the use of such systems is in compliance with information management directives, and regulations.

Considerable knowledge of world/current events

Considerable oral and written communication skills for responses or briefings on information management topics and related issues to a wide range of technical and non-technical customers, co-workers, and managers.

Considerable presentation skills, demonstrated by developing and conducting briefings and/or instruction on information management topics in internal group settings in a manner that is easily understood

Considerable problem solving skills, demonstrated by identifying the nature of the problem and its impact on the organization; conducting research and analysis to ensure understanding of the problem and desired outcomes prior to proposing solutions; identifying a range of options and providing impacts of each option.

Considerable project management skills demonstrated by planning and implementing information management projects, which address organizational needs.

Considerable research and analysis skills, demonstrated by identifying and securing relevant data; identifying key issues and relationships from a base of information; relating and comparing data from different sources and drawing conclusions supported by the data; transforming the data into a form that will make them easy to understand and interpret

Demonstrated leadership and supervisory skills to include coaching, mentoring, and professional development, gained through formal and informal leadership roles.

Thorough knowledge of the statutes, orders, and/or regulations governing information management and information security policies, procedures, and practices.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

Thorough knowledge of the statutes, orders, and/or regulations governing information management and information security policies, procedures, and practices.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Tools

Desktop Computers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work,

interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Information Management Officer - Full Performance

Skill Community: Enterprise IT

Labor Group: Information Management

Job Classification: Contractor

Status: Active

Date Effective: 5/31/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance. Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Positions at this level have broad knowledge of the organization's information management governance process and the issues that impact electronic record keeping systems, filing systems, metadata, records retention and disposition, vital records, classification and control markings, etc. Positions manage office-level information management programs to ensure that information management systems meet corporate and customer business needs. Positions also assess problems and develop solutions to resolve complex issues, which promote efficiency and improve day-to-day information management operations. In addition, positions are expected to maintain currency on technical job knowledge through attending courses, seminars, workshops, etc. and by reading technical journals.

Based on assignment, positions may have information management responsibilities for both domestic and foreign locations, and the work may require travel to these locations approximately three times a year for up to two weeks at a time.

Short Summary:

Positions at this level have broad knowledge of the organization's information management governance process and the issues that impact electronic record keeping systems, filing systems, metadata, records retention and disposition, vital records, classification and control markings, etc. Positions manage office-level information management programs to ensure that information management systems meet corporate and customer business needs. Positions also assess problems and develop solutions to resolve complex issues, which promote efficiency and improve day-to-day information management operations. Based on assignment, positions may have information management responsibilities for both domestic and foreign locations, and the work may require travel to these locations approximately three times a year for up to two weeks at a time.

Duties, Tasks, and Responsibilities

Anticipates and assesses information management requirements for office start-ups, closures, and reorganizations.

Assesses the state of the office's records and mission needs to determine the feasibility of migrating to electronic information management systems; researches and identifies systems that will meet the needs of the office, legal and regulatory requirements, and can be supported by the office's technical infrastructure; presents recommendations to senior management with a cost-benefit analysis

Based on assignment, may be responsible for:
Implements and assesses information management programs, procedures, and processes at both domestic and foreign locations.
Profiles cable correspondence.
Performs field compliance reviews to include monitoring compliance with emergency destruction policy and procedures
Supervises and/or provides direction and guidance to developmental Information Management Officers and others involved in information management within the unit.
Oversees the work of subordinates to ensure that work is performed in an accurate and timely fashion.
Provides advice, guidance, and instruction to subordinates on information management processes, policy interpretation, workflow, and directorate/MSO priorities.
Establishes performance objectives and standards; assists subordinates in setting individual goals.
Assesses the performance and skills of subordinates; provides performance and developmental feedback on an ongoing basis; provides input to formal performance appraisal.
Performs other ad hoc duties as assigned.

Communicates the information management program within the office to ensure that personnel are aware of their information management responsibilities.

Conducts evaluations and compliance reviews regarding the office's record keeping system and procedures; analyzes information management processes to identify shortcomings; raises issues and makes recommendations to senior management; initiates corrective action to improve efficiency.

Conducts records and information system inventories/audits and assists managers in developing, documenting, and disseminating adequate and proper record keeping requirements.

Coordinates efforts to dispose of information within information systems in accordance with approved policy.

Determines what office's records are "vital records" (records that must be retained in a secure location in the event of a natural or other disaster).

Develops instructional material and delivers training to office personnel.

Develops strategies to communicate to customers the value and business importance of information management (IM) and the technical systems deployed in support of IM functions.

Gathers, analyzes, and presents data and recommendations regarding the record holdings of the office under general supervision.

Guides/assists in the implementation of office-level file plans.

Identifies and resolves information management-related issues as they pertain to automated information systems.

Identifies innovative approaches and initiatives to increase information management awareness.

Manages office-level information management programs under general supervision to ensure the business needs of the organization are met while all policies, transactions, functions, decisions, and procedures are properly documented and preserved, and legal and regulatory requirements are met.

Prepares program awareness materials

Provides advice and guidance to office managers and employees on a range of complex information management issues under general supervision (e.g., identification and control of proprietary information; records disposition; transfer and retrieval of archived information; implementation of information management standards; electronic records certification, etc.)

Provides information management guidance to systems developers and program managers.

Validates the preparation and transfer of temporary and permanent electronic and paper records to electronic or physical repositories (i.e., records center); provides guidance to office personnel on procedures to retrieve archived information.

Knowledge, Skills, and Abilities

Considerable customer service skills, demonstrated by anticipating and responding to customers' needs in a manner that provides added value and generates customer satisfaction, even in situations in which the outcome is not what the customer desired.

Considerable interpersonal skills, demonstrated by developing relationships and networks with directorate/office managers and employees

Considerable knowledge of a wide range of technical methods, principles, and practices in automated data processing as it relates to information management, control, storage, and retrieval; ability to apply this knowledge to evaluate existing digital, micrographic, and manual systems to examine their effectiveness, and when it is appropriate to upgrade an existing system or to employ less sophisticated methods and less costly equipment.

Considerable knowledge of the Intelligence Community and CIA mission, collection and production priorities, and strategic direction.

Considerable knowledge of the components' operations/mission, business functions, records, and record keeping systems.

Considerable knowledge of the functions, processes, and principles of information management and of the methods used to gather, analyze, and evaluate information management issues

Considerable knowledge of the operation of automated systems and the ability to apply this knowledge to assess whether the use of such systems is in compliance with information management directives, and regulations.

Considerable knowledge of world/current events

Considerable oral and written communication skills for responses or briefings on information management topics and related issues to a wide range of technical and non-technical customers, co-workers, and managers.

Considerable presentation skills, demonstrated by developing and conducting briefings and/or instruction on information management topics in internal group settings in a manner that is easily understood

Considerable problem solving skills, demonstrated by identifying the nature of the problem and its impact on the organization; conducting research and analysis to ensure understanding of the problem and desired outcomes prior to proposing solutions; identifying a range of options and providing impacts of each option.

Considerable project management skills demonstrated by planning and implementing information management projects, which address organizational needs.

Considerable research and analysis skills, demonstrated by identifying and securing relevant data; identifying key issues and relationships from a base of information; relating and comparing data from different sources and drawing conclusions supported by the data; transforming the data into a form that will make them easy to understand and interpret

Demonstrated leadership and supervisory skills to include coaching, mentoring, and professional development, gained through formal and informal leadership roles.

Thorough knowledge of the statutes, orders, and/or regulations governing information management and information security policies, procedures, and practices.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

• Develops instructional material and delivers training to office personnel.

• Develops strategies to communicate to customers the value and business importance of information management (IM) and the technical systems deployed in support of IM functions.

• Gathers, analyzes, and presents data and recommendations regarding the record holdings of the office under general supervision.

• Guides/assists in the implementation of office-level file plans.

• Identifies innovative approaches and initiatives to increase information management awareness.

• Manages office-level information management programs under general supervision to ensure the business needs of the organization are met while all policies, transactions, functions, decisions, and procedures are properly documented and preserved, and legal and regulatory requirements are met.

• Prepares program awareness materials

• Provides advice and guidance to office managers and employees on a range of complex information management issues under general supervision (e.g., identification and control of proprietary information; records disposition; transfer and retrieval of archived information; implementation of information management standards; electronic records certification, etc.)

• Provides information management guidance to systems developers and program managers.

• Validates the preparation and transfer of temporary and permanent electronic and paper records to electronic or physical repositories (i.e., records center); provides guidance to office personnel on procedures to retrieve archived information.

Knowledge, Skills, and Abilities

• Considerable customer service skills, demonstrated by anticipating and responding to customers' needs in a manner that provides added value and generates customer satisfaction, even in situations in which the outcome is not what the customer desired.

• Considerable interpersonal skills, demonstrated by developing relationships and networks with directorate/office managers and employees

• Considerable knowledge of a wide range of technical methods, principles, and practices in automated data processing as it relates to information management, control, storage, and retrieval; ability to apply this knowledge to evaluate existing digital, micrographic, and manual systems to examine their effectiveness, and when it is appropriate to upgrade an existing system or to employ less sophisticated methods and less costly equipment.

• Considerable knowledge of the Intelligence Community and CIA mission, collection and production priorities, and strategic direction.

• Considerable knowledge of the components' operations/mission, business functions, records, and record keeping systems.

• Considerable knowledge of the functions, processes, and principles of information management and of the methods used to gather, analyze, and evaluate information management issues

• Considerable knowledge of the operation of automated systems and the ability to apply this knowledge to assess whether the use of such systems is in compliance with information management directives, and regulations.

• Considerable knowledge of world/current events

• Considerable oral and written communication skills for responses or briefings on information management topics and related issues to a wide range of technical and non-technical customers, co-workers, and managers.

• Considerable presentation skills, demonstrated by developing and conducting briefings and/or instruction on information management topics in internal group settings in a manner that is easily understood

• Considerable problem solving skills, demonstrated by identifying the nature of the problem and its impact on the organization; conducting research and analysis to ensure understanding of the problem and desired outcomes prior to proposing solutions; identifying a range of options and providing impacts of each option.

• Considerable project management skills demonstrated by planning and implementing information management projects, which address organizational needs.

• Considerable research and analysis skills, demonstrated by identifying and securing relevant data; identifying key issues and relationships from a base of information; relating and comparing data from different sources and drawing conclusions supported by the data; transforming the data into a form that will make them easy to understand and interpret

• Demonstrated leadership and supervisory skills to include coaching, mentoring, and professional development, gained through formal and informal leadership roles.

• Thorough knowledge of the statutes, orders, and/or regulations governing information management and information security policies, procedures, and practices.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Tools

Desktop Computers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Received: Positions work independently under general supervision.

Given : This may be a first-line supervisory position depending on assignment

Information Management Support Officer - Developmental

Skill Community: Enterprise IT

Labor Group: Information Management

Job Classification: Contractor

Status: Active

Date Effective: 5/31/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Duties include performing moderately complex records and classification management activities; providing customer service and technical advice and guidance to management, staff, customers, and junior employees on records and classification management activities and issues; and performing other miscellaneous duties as assigned. Positions have a working knowledge of the statutes, orders, and regulations governing information management policies, procedures, and practices.

Short Summary:

Duties include performing moderately complex records and classification management activities; providing customer service and technical advice and guidance to management, staff, customers, and junior employees on records and classification management activities and issues; and performing other miscellaneous duties as assigned. Positions have a working knowledge of the statutes, orders, and regulations governing information management policies, procedures, and practices.

Duties, Tasks, and Responsibilities

Applies Records Control Schedules

Approves records retirement requests

Approves temporary records for destruction.

Assists employees during check-in/out with information management responsibilities.

Assists in evaluation and compliance reviews.

Assists with records searches.

Briefs and assists customers with classification management.

Executes established information management procedures and practices.

Executes procedures for vital records protection, prevention, and disaster recovery programs.

Helps to define requirements for systems that impact their work.

Manages content in central repositories, databases, and websites, as applicable.

Participates in the development and maintenance of record keeping systems (manual and automated) and component file plans.

Performs moderately complex records and classification management activities under immediate or general supervision.

Performs other miscellaneous duties as assigned.

Performs preservation work on permanent records.

Performs records and information system inventories.

Prepares and packs records for transfer to the Archive Records Center (AARC) and retrieves records and documents from the AARC

Processes loan requests for retired records

Processes records for destruction.

Provides basic records retirement guidance to managers and customers.

Provides customer service and technical advice and guidance to management, staff, customers, and junior employees on records and classification management activities and issues under immediate or general supervision

Provides general guidance to customers on records and classification management programs, including electronic record keeping, files management, forms management, records preservation and destruction.

Provides records control, storage, preservation and destruction.

Provides surge support to organizations.

Provides training and technical assistance to junior officers.

Responds to moderately complex queries from customers

Knowledge, Skills, and Abilities

Ability to foster changing work requirements and priorities.

Applies information management knowledge to assist with evaluating existing digital, micrographic, and manual systems.

Communication skills (oral and written) demonstrated by expressing ideas, explanations and concepts in a manner appropriate for the audience (one-on-one, small groups, etc.) using a variety of formats (Lotus Notes, briefing, consulting, etc.).

Customer service skills demonstrated by anticipating and responding to customers' needs in a manner that provides added value and generates customer satisfaction, even in situations in which the outcome is not what the customer desired.

Good judgment and personal initiative to recognize the appropriate action to be taken for completion of routine to moderately complex tasks.

Interpersonal skills demonstrated by developing good working relationships and networks with directorate/office managers, employees, and co-workers.

Knowledge of the organizational structure, mission, and business functions.

Knowledge of the component's mission, business functions, records, and record keeping systems, if applicable to the assignment.

Knowledge of the processes and principles of information management and of the methods used to gather, analyze, and evaluate information management issues.

Knowledge of the statutes, orders, and regulations governing information management policies, procedures, and practices.

Knowledge of the technical methods, principles, and practices in automated data processing as it relates to information management, such as control, storage, and retrieval.

Presentation skills demonstrated by developing and conducting briefings on information management topics in internal group settings in a manner that is easily understood

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

Ability to foster changing work requirements and priorities.

Applies information management knowledge to assist with evaluating existing digital, micrographic, and manual systems.

Communication skills (oral and written) demonstrated by expressing ideas, explanations and concepts in a manner appropriate for the audience (one-on-one, small groups, etc.) using a variety of formats (Lotus Notes, briefing, consulting, etc.).

Customer service skills demonstrated by anticipating and responding to customers' needs in a manner that provides added value and generates customer satisfaction, even in situations in which the outcome is not what the customer desired.

Good judgment and personal initiative to recognize the appropriate action to be taken for completion of routine to moderately complex tasks.

Interpersonal skills demonstrated by developing good working relationships and networks with directorate/office managers, employees, and co-workers.

Knowledge of the organizational structure, mission, and business functions.

Knowledge of the component's mission, business functions, records, and record keeping systems, if applicable to the assignment.

Knowledge of the processes and principles of information management and of the methods used to gather, analyze, and evaluate information management issues.

Knowledge of the statutes, orders, and regulations governing information management policies, procedures, and practices.

Knowledge of the technical methods, principles, and practices in automated data processing as it relates to information management, such as control, storage, and retrieval.

Presentation skills demonstrated by developing and conducting briefings on information management topics in internal group settings in a manner that is easily understood

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Information Management Support Officer - Subject Matter Expert

Skill Community: Enterprise IT

Labor Group: Information Management

Job Classification: Contractor

Status: Active

Date Effective: 5/31/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Duties include performing moderately complex records and classification management activities; providing customer service and technical advice and guidance to management, staff, customers, and junior employees on records and classification management activities and issues; and performing other miscellaneous duties as assigned. Positions have a working knowledge of the statutes, orders, and regulations governing information management policies, procedures, and practices.

Short Summary:

Duties include performing moderately complex records and classification management activities; providing customer service and technical advice and guidance to management, staff, customers, and junior employees on records and classification management activities and issues; and performing other miscellaneous duties as assigned. Positions have a working knowledge of the statutes, orders, and regulations governing information management policies, procedures, and practices.

Duties, Tasks, and Responsibilities

Applies Records Control Schedules

Approves records retirement requests

Approves temporary records for destruction.

Assists employees during check-in/out with information management responsibilities.

Assists in evaluation and compliance reviews.

Assists with records searches.

Briefs and assists customers with classification management.

Executes established information management procedures and practices.

• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Information Management Technical Officer - Developmental

Skill Community: Enterprise IT

Labor Group: Information Management

Job Classification: Contractor

Status: Active

Date Effective: 5/31/2012

Standard Occupational Code:

Long Summary:

Briefs management, customers, and Intelligence Community partners on information systems topics and issues, and gives presentations to and Intelligence Community boards and forums.

Develops strategic alliances with key contacts and senior-level officials.

Develops, implements, and interprets information management policies, procedures, and practices related to information systems.

Establishes performance objectives and standards; assists subordinates in setting individual goals.

Evaluates proposals regarding new information management policies, procedures, systems, and programs.

Identifies requirements for information management education.

Independently performs the complete range of information systems activities to support management, staff, and customers under broad senior level guidance.

Oversees the work of subordinates to ensure that work is performed in an accurate and timely fashion.

Participates in personnel selection and assignment process

Performs other ad hoc duties as assigned.

Provides advice, guidance and instruction to subordinates on information management processes, policy interpretation, workflow, and directorate priorities.

Provides information management guidance to systems developers and program managers.

Provides information systems consulting services to include business process analysis, work flow/information flow studies, and develops information systems, which meet corporate and customer business requirements as well as information management standards

Represents the organization as a member of various policy level and Intelligence Community boards, task forces, working groups, and other forums related to information management and information systems.

Researches and analyzes complex technical issues related to information systems.

Serves as advisor to senior managers in regard to information management as it relates to information systems.

Solicits feedback from customers/management/co-workers when proposed policy/procedures will have a major impact.

Supervises and/or provides direction and guidance to office-level Information Management Officers and others involved in information management within the unit.

Teaches information management classes, including the development of course lesson plans and instructional materials.

Utilizes knowledge of advanced search and retrieval leading edge technologies to effectively exploit information systems.

Utilizes knowledge of business systems, information systems analysis, information management, and technologies to develop information systems requirements

Works with US government counterparts on information management information systems issues and reports back to senior management

Knowledge, Skills, and Abilities

Ability to interact with customers, employees, and managers at all levels in order to contribute to and influence decision-making and resolve conflict

Computer science or related information sciences discipline.

Customer service skills demonstrated by anticipating and responding to customers' needs in a manner that provides added value and generates customer satisfaction, even in situations in which the outcome is not what the customer desired.

Demonstrated leadership and supervisory skills gained through previous assignments in formal and informal leadership roles.

Extensive knowledge of business systems analysis with expertise in one of the following:

Extensive knowledge of systems design and analysis, metadata, content management, and knowledge management.

Extensive knowledge of, and ability to apply analytic, diagnostic, and qualitative techniques sufficient to identify, evaluate, and recommend to senior managers appropriate information systems solutions to resolve complex problems and issues.

Organizational (taxonomic) methodologies to include tools for their implementation and exploitation

Presentation skills demonstrated by developing and conducting briefings and/or instruction on information management topics to internal and external intelligence community groups in a manner that is easily understood and appropriate to the audience.

Project management skills demonstrated by planning and implementing information management and/or information systems projects, which address organizational needs.

Research and analysis skills demonstrated by identifying and securing relevant data; identifying key issues and relationships from a base of information; relating and comparing data from different sources and drawing conclusions supported by data; transforming the data into a form that will make them easy to understand and interpret

Search and retrieval of information to include exploitation tools for such actions

Thorough knowledge of the statutes, orders, and/or regulations governing information management and information security policies, procedures, and practices

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Tools

Desktop Computers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Based on assignment, positions may be responsible for first-line supervision to include coaching, mentoring, and evaluating contractor subordinates.

Duties, Tasks, and Responsibilities

Analyzes intelligence information and makes final recommendations for classification and declassification of such information.

Applies effective project management methodologies to information review and release needs.

Assesses the performance and skills of subordinates; provide performance and developmental feedback on an ongoing basis; prepare or provide input to formal performance appraisals.

Assist government managers in negotiating with congressional, judicial, and oversight boards to refine taskings and manage expectations.

Assumes ultimate quality control responsibility for products leaving the contractor team.

Coordinates and builds consensus, as appropriate, within the, intelligence community, and government.

Coordinates with other resources to collaboratively solve/de-conflict cross-community issues.

Defines, develops, and manages search strategies for records.

Develops effective and efficient tactical plans in order to implement the Office's Strategic Plan.

Develops effective resource management plans to accomplish mission goals or business objectives.

Develops efficient and cost effective processes to implement or improve information release policies and procedures.

Develops increasingly effective quality assurance processes.

Develops information review and release policies that protect sources, methods, and mission capabilities.

Develops long-range strategic plans to meet mission-critical priorities and accomplish work goals.

Develops risk mitigation/contingency plans that enable mission success against unforeseen/undesirable circumstances.

Directs (coordinates/synchronizes) a project team and its resources necessary to support plan implementation.

Directs and prioritizes intelligence information review and release programs to ensure accurate, timely, relevant and complete responses to public, executive, legislative, or judicial requests.

Drafts and advises on policy recommendations.

Establishes performance objectives and standards; assist contract subordinates in setting individual goals.

Identifies key issues and problems, including those resulting from unauthorized disclosure, inadvertent release, declassification, and the collective mosaic effect of release.

Leads ongoing evaluation of contract resources being applied to current programs to ensure efficiency and cost-effectiveness (e.g. monitors budget, staffing allocations).

Leverages the latest technology to meet business needs.

Oversees the work of subordinates to ensure that work is performed in an accurate and timely fashion.

Participates in contractor personnel selection and assignment process.

Performs other ad hoc duties as assigned.

Prepares explicit criteria and metrics for evaluating actual performance against plans.

Prepares position papers when EXDIR or DCI-level decisions are required.

Provides advice, guidance, and instruction to subordinates on information review and release information processes, policy interpretation, and workflow.

Provides guidance to and defends policy decisions on high profile, politically sensitive issues to senior and executive management and information review and release customers.

Provides key guidance to government prosecutors and judges with respect to classification equities.

Represents the inter- and intra- information review and release forums such as ISCAP and NSC committees.

Supervises and/or provides direction and guidance to contractor Information Review and Release Analysts and others performing related work within the work unit.

Knowledge, Skills, and Abilities

Considerable ability to work effectively as a team leader or team member; understands the differences in roles to build team cohesiveness, reaches consensus and achieves team goals; shares information, knowledge, and information with the team.

Excellent customer service skills, demonstrated by anticipating and responding to customers' needs in a manner that provides added value and generates customer satisfaction, even in situations in which the outcome is not what the customer desired.

Excellent interpersonal skills, demonstrated by developing relationships and networks with directorate/office managers and employees.

Excellent problem solving skills, demonstrated by: identifying the nature of the problem and its impact on the organization; conducting research and analysis to ensure understanding of the problem and desired outcomes prior to proposing solutions; identifying a range of options and providing impacts of each option; and, suggesting a preferred course of action.

Leadership and supervisory skills, gained through previous assignments in formal and informal leadership roles.

Superior ability to manage competing priorities and work requirements by continuously evaluating the needs of the organization's mission against ongoing work; planning/scheduling own and unit's work so that work is completed on time.

Superior communication skills (oral and written), demonstrated by expressing ideas, explanations, and concepts in a manner appropriate for the audience (one-on-one, small groups, hearing and court proceedings, etc.) using a variety of formats (e-mail, counseling, briefing, written reports, etc.).

Thorough knowledge of a wide range of analytic methodologies and the ability to apply this knowledge to evaluate Freedom of Information Act and Privacy Act; EO 12958; and policy and procedures in matters of declassification.

Thorough knowledge of the Freedom of Information Act, Privacy Act, Executive Order 12958, and policies and procedures governing the information review and release program, and implementing directives related to classification, control markings, and declassification.

Thorough knowledge of the's organization structure and history, including mission and business functions.

Thorough negotiation, influencing, and conflict management skills demonstrated by addressing difficult issues at senior and inter- levels.

Thorough project leadership skills, demonstrated by planning and implementing information review and release plans and actions to address identified needs.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.

Positions are responsible for directing contract teams responsible for intelligence information review programs to analyze national security equities and render decisions relative to the continuing protection or release of classified or other sensitive information. The executive, judicial, and legislative branches of government mandate these programs. Positions are expected to advise senior government officials on significant declassification and information protection issues that may affect policy and programs; develop information review and release (IRR) policies that protect sources, methods, and mission capabilities; develop efficient and cost effective processes to implement or improve information release policies and procedures; develop effective resource management plans to accomplish mission goals or business objectives; develop long-range strategic plans to meet mission-critical priorities and accomplish work goals; and perform miscellaneous duties as assigned. Based on assignment, positions may be responsible for first-line supervision to include coaching, mentoring, and evaluating contractor subordinates.

Short Summary:

This is expert within the multi-level Information Review and Release Analyst professional occupational specialty. Positions work independently with broad lateral guidance from senior managers in the area of assignment. Positions are responsible for directing contract teams responsible for intelligence information review programs to analyze national security equities and render decisions relative to the continuing protection or release of classified or other sensitive information. The executive, judicial, and legislative branches of government mandate these programs. Positions are expected to advise senior government officials on significant declassification and information protection issues that may affect policy and programs; develop information review and release (IRR) policies that protect sources, methods, and mission capabilities; develop efficient and cost effective processes to implement or improve information release policies and procedures; develop effective resource management plans to accomplish mission goals or business objectives; develop long-range strategic plans to meet mission-critical priorities and accomplish work goals; and perform miscellaneous duties as assigned. Based on assignment, positions may be responsible for first-line supervision to include coaching, mentoring, and evaluating contractor subordinates.

Duties, Tasks, and Responsibilities

Analyzes intelligence information and makes final recommendations for classification and declassification of such information.

Applies effective project management methodologies to information review and release needs.

Assesses the performance and skills of subordinates; provide performance and developmental feedback on an ongoing basis; prepare or provide input to formal performance appraisals.

Assist government managers in negotiating with congressional, judicial, and oversight boards to refine taskings and manage expectations.

Assumes ultimate quality control responsibility for products leaving the contractor team.

Coordinates and builds consensus, as appropriate, within the, intelligence community, and government.

Coordinates with other resources to collaboratively solve/de-conflict cross-community issues.

Defines, develops, and manages search strategies for records.

Develops effective and efficient tactical plans in order to implement the Office's Strategic Plan.

Develops effective resource management plans to accomplish mission goals or business objectives.

Develops increasingly effective quality assurance processes.

Develops information review and release policies that protect sources, methods, and mission capabilities.

Develops long-range strategic plans to meet mission-critical priorities and accomplish work goals.

Develops risk mitigation/contingency plans that enable mission success against unforeseen/undesirable circumstances.

Directs (coordinates/synchronizes) a project team and its resources necessary to support plan implementation.

Directs and prioritizes intelligence information review and release programs to ensure accurate, timely, relevant and complete responses to public, executive, legislative, or judicial requests.

Drafts and advises on policy recommendations.

Establishes performance objectives and standards; assist contract subordinates in setting individual goals.

Identifies key issues and problems, including those resulting from unauthorized disclosure, inadvertent release, declassification, and the collective mosaic effect of release.

Leads ongoing evaluation of contract resources being applied to current programs to ensure efficiency and cost-effectiveness (e.g. monitors budget, staffing allocations).

Leverages the latest technology to meet business needs.

Oversees the work of subordinates to ensure that work is performed in an accurate and timely fashion.

Participates in contractor personnel selection and assignment process.

Performs other ad hoc duties as assigned.

Prepares explicit criteria and metrics for evaluating actual performance against plans.

Prepares position papers when EXDIR or DCI-level decisions are required.

Provides advice, guidance, and instruction to subordinates on information review and release information processes, policy interpretation, and workflow.

Provides guidance to and defends policy decisions on high profile, politically sensitive issues to senior and executive management and information review and release customers.

Provides key guidance to government prosecutors and judges with respect to classification equities.

Represents the inter- and intra- information review and release forums such as ISCAP and NSC committees.

Supervises and/or provides direction and guidance to contractor Information Review and Release Analysts and others performing related work within the work unit.

• Develops efficient and cost effective processes to implement or improve information release policies and procedures.

Knowledge, Skills, and Abilities

Considerable ability to work effectively as a team leader or team member; understands the differences in roles to build team cohesiveness, reaches consensus and achieves team goals; shares information, knowledge, and information with the team.

Excellent customer service skills, demonstrated by anticipating and responding to customers' needs in a manner that provides added value and generates customer satisfaction, even in situations in which the outcome is not what the customer desired.

Excellent interpersonal skills, demonstrated by developing relationships and networks with directorate/office managers and employees.

Excellent problem solving skills, demonstrated by: identifying the nature of the problem and its impact on the organization; conducting research and analysis to ensure understanding of the problem and desired outcomes prior to proposing solutions; identifying a range of options and providing impacts of each option; and, suggesting a preferred course of action.

Leadership and supervisory skills, gained through previous assignments in formal and informal leadership roles.

Superior ability to manage competing priorities and work requirements by continuously evaluating the needs of the organization's mission against ongoing work; planning/scheduling own and unit's work so that work is completed on time.

Superior communication skills (oral and written), demonstrated by expressing ideas, explanations, and concepts in a manner appropriate for the audience (one-on-one, small groups, hearing and court proceedings, etc.) using a variety of formats (e-mail, counseling, briefing, written reports, etc.).

Thorough knowledge of a wide range of analytic methodologies and the ability to apply this knowledge to evaluate Freedom of Information Act and Privacy Act; EO 12958; and policy and procedures in matters of declassification.

Thorough knowledge of the Freedom of Information Act, Privacy Act, Executive Order 12958, and policies and procedures governing the information review and release program, and implementing directives related to classification, control markings, and declassification.

Thorough knowledge of the's organization structure and history, including mission and business functions.

Thorough negotiation, influencing, and conflict management skills demonstrated by addressing difficult issues at senior and inter- levels.

Thorough project leadership skills, demonstrated by planning and implementing information review and release plans and actions to address identified needs.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Tools

Desktop Computer

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, and carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Information Review and Release Analyst - Full Performance

Skill Community: Enterprise IT

Labor Group: Information Management

Job Classification: Contractor

Status: Active

Date Effective: 7/2/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. This is work within the multi-level Information Review and Release Analyst professional occupational specialty. Positions work independently with broad lateral guidance from senior managers in the area of assignment. Positions are responsible for directing contract teams responsible for intelligence information review programs to analyze national security equities and render decisions relative to the continuing protection or release of classified or other sensitive information. The executive, judicial, and legislative branches of government mandate these programs. Positions are expected to advise senior government officials on significant declassification and information protection issues that may affect policy and programs; develop information review and release (IRR) policies that protect sources, methods, and mission capabilities; develop efficient and cost effective processes to implement or improve information release policies and procedures; develop effective resource management plans to accomplish mission goals or business objectives; develop long-range strategic plans to meet mission-critical priorities and accomplish work goals; and perform miscellaneous duties as assigned. Based on assignment, positions may be responsible for first-line supervision to include coaching, mentoring, and evaluating contractor subordinates.

Thorough project leadership skills, demonstrated by planning and implementing information review and release plans and actions to address identified needs.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Tools

Desktop Computer

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, and carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Information Review and Release Analyst - Subject Matter Expert

Skill Community: Enterprise IT

Labor Group: Information Management

Job Classification: Contractor

Status: Active

Date Effective: 7/2/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. This is work within the multi-level Information Review and Release Analyst professional occupational specialty. Positions work independently with broad lateral guidance from senior managers in the area of assignment. Positions are responsible for directing contract teams responsible for intelligence information review programs to analyze national security equities and render decisions relative to the continuing protection or release of classified or other sensitive information. The executive, judicial, and legislative branches of government mandate these programs. Positions are expected to advise senior government officials on significant declassification and information protection issues that may affect policy and programs; develop information review and release (IRR) policies that protect sources, methods, and mission capabilities; develop efficient and cost effective processes to implement or improve information release policies and procedures; develop effective resource management plans to accomplish mission goals or business objectives; develop long-range strategic plans to meet mission-critical priorities and accomplish work goals; and perform miscellaneous duties as assigned. Based on assignment, positions may be responsible for first-line supervision to include coaching, mentoring, and evaluating contractor subordinates.

Based on assignment, positions may be responsible for first-line supervision to include coaching, mentoring, and evaluating contractor subordinates.

Duties, Tasks, and Responsibilities

Analyzes intelligence information and makes final recommendations for classification and declassification of such information.

Applies effective project management methodologies to information review and release needs.

Assesses the performance and skills of subordinates; provide performance and developmental feedback on an ongoing basis; prepare or provide input to formal performance appraisals.

Assist government managers in negotiating with congressional, judicial, and oversight boards to refine taskings and manage expectations.

Assumes ultimate quality control responsibility for products leaving the contractor team.

Coordinates and builds consensus, as appropriate, within the, intelligence community, and government.

Coordinates with other resources to collaboratively solve/de-conflict cross-community issues.

Defines, develops, and manages search strategies for records.

Develops effective and efficient tactical plans in order to implement the Office's Strategic Plan.

Develops effective resource management plans to accomplish mission goals or business objectives.

Develops efficient and cost effective processes to implement or improve information release policies and procedures.

Develops increasingly effective quality assurance processes.

Develops information review and release policies that protect sources, methods, and mission capabilities.

Develops long-range strategic plans to meet mission-critical priorities and accomplish work goals.

Develops risk mitigation/contingency plans that enable mission success against unforeseen/undesirable circumstances.

Directs (coordinates/synchronizes) a project team and its resources necessary to support plan implementation.

Directs and prioritizes intelligence information review and release programs to ensure accurate, timely, relevant and complete responses to public, executive, legislative, or judicial requests.

Drafts and advises on policy recommendations.

Establishes performance objectives and standards; assist contract subordinates in setting individual goals.

Identifies key issues and problems, including those resulting from unauthorized disclosure, inadvertent release, declassification, and the collective mosaic effect of release.

Leads ongoing evaluation of contract resources being applied to current programs to ensure efficiency and cost-effectiveness (e.g. monitors budget, staffing allocations).

Leverages the latest technology to meet business needs.

Oversees the work of subordinates to ensure that work is performed in an accurate and timely fashion.

Participates in contractor personnel selection and assignment process.

Performs other ad hoc duties as assigned.

Prepares explicit criteria and metrics for evaluating actual performance against plans.

Prepares position papers when EXDIR or DCI-level decisions are required.

Provides advice, guidance, and instruction to subordinates on information review and release information processes, policy interpretation, and workflow.

Provides guidance to and defends policy decisions on high profile, politically sensitive issues to senior and executive management and information review and release customers.

Provides key guidance to government prosecutors and judges with respect to classification equities.

Represents the inter- and intra- information review and release forums such as ISCAP and NSC committees.

Supervises and/or provides direction and guidance to contractor Information Review and Release Analysts and others performing related work within the work unit.

Knowledge, Skills, and Abilities

Considerable ability to work effectively as a team leader or team member; understands the differences in roles to build team cohesiveness, reaches consensus and achieves team goals; shares information, knowledge, and information with the team.

Excellent customer service skills, demonstrated by anticipating and responding to customers' needs in a manner that provides added value and generates customer satisfaction, even in situations in which the outcome is not what the customer desired.

Excellent interpersonal skills, demonstrated by developing relationships and networks with directorate/office managers and employees.

Excellent problem solving skills, demonstrated by: identifying the nature of the problem and its impact on the organization; conducting research and analysis to ensure understanding of the problem and desired outcomes prior to proposing solutions; identifying a range of options and providing impacts of each option; and, suggesting a preferred course of action.

Leadership and supervisory skills, gained through previous assignments in formal and informal leadership roles.

Superior ability to manage competing priorities and work requirements by continuously evaluating the needs of the organization's mission against ongoing work; planning/scheduling own and unit's work so that work is completed on time.

Superior communication skills (oral and written), demonstrated by expressing ideas, explanations, and concepts in a manner appropriate for the audience (one-on-one, small groups, hearing and court proceedings, etc.) using a variety of formats (e-mail, counseling, briefing, written reports, etc.).

Thorough knowledge of a wide range of analytic methodologies and the ability to apply this knowledge to evaluate Freedom of Information Act and Privacy Act; EO 12958; and policy and procedures in matters of declassification.

Thorough knowledge of the Freedom of Information Act, Privacy Act, Executive Order 12958, and policies and procedures governing the information review and release program, and implementing directives related to classification, control markings, and declassification.

Thorough knowledge of the organization structure and history, including mission and business functions.

Thorough negotiation, influencing, and conflict management skills demonstrated by addressing difficult issues at senior and inter- levels.

Thorough project leadership skills, demonstrated by planning and implementing information review and release plans and actions to address identified needs.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Superior communication skills (oral and written) demonstrated by expressing ideas, explanations and concepts in a manner appropriate for the audience (one-on-one, small groups, etc.) using a variety of formats (E-mail, counseling, briefing, written reports, etc.).

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Tools

Desktop Computers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Intel Educator - Subject Matter Expert

Skill Community: Human Resources

Labor Group: CIAU

Job Classification: Contractor

Status: Active

Date Effective: 5/17/2012

Standard Occupational Code:

Long Summary:
This is subject-matter expert (SME) work within the Educator occupation. Incumbents provide cross-directorate, corporate training that is designed to instill the Agency's vision, mission, and values in officers at critical junctures throughout their careers or provide training that gives officers knowledge and skills essential to performing the Agency's mission. SME educators have deep subject-matter expertise in a field relative to the Agency's mission. In addition, they possess an in-depth knowledge of the Agency's mission, products, and customers.

Short Summary:
This is subject-matter expert (SME) work to provide cross-directorate, corporate training to give officers knowledge and skills essential to performing the Agency's mission. The position is responsible for delivering online and classroom-based training designed to instill the Agency's vision, mission, and values in officers at critical junctures throughout their careers or provide training that gives officers knowledge and skills essential to performing the Agency's mission; having facilitation and classroom management skills that—coupled with the SMEs deep subject-matter expertise and knowledge of the mission, products, and customers—will enable the SME to deliver instruction; developing new curricula or modifying existing programs or modules to reflect current developments in a field of scholarship relevant to the Agency mission.

Duties, Tasks, and Responsibilities

Coordinates training classes, including the scheduling of instructors, facilities, and materials.

- Monitors the scheduling and delivery of products/classes.
- Assists in the procurement of materials for delivery of training programs or activities.
- Updates course materials to reflect current developments in relevant subject matters; consults with senior instructors to determine appropriate teaching techniques and documentation.
- Provides guidance on modifying activities and procedures depending on the dynamics of each class; uses individual differences to enrich the classroom environment (for example, instructor teams and class participants).
- With the help of a professional instructional designer, creates training experiences that contain relevant subject-matter expertise, incorporates a variety of instructional techniques appropriate for adult learners, and has measurable learning objectives.

Designs and delivers training to address gaps in skill or knowledge.

- Serves as a primary substantive resource and authority in at least one area of special emphasis for the IC (e.g., WMD, leadership, or tradecraft) or in adult education instruction (e.g., needs analysis, assessment, or instructional technology).
- Tailors instructional systems design processes and provides solutions-based approaches in training to meet performance needs of Agency and IC officers worldwide.
- Uses computer software, Internet, and other enterprise-wide tools for research, course development, and course delivery.
- Uses enterprise-wide toolset for computer-mediated training.
- Manages and organizes online content so that students can easily retrieve it later.
- Conducts and/or leads needs and task analyses using a variety of techniques, including quantitative and qualitative methods.
- Partners with customers to ensure program quality and relevance.
- Applies a variety of presentation and elicitation techniques to deliver a course, or segments of a course; processes classroom experiences to ensure that learning points are made and students are able to apply the learning to the job.

Maintains professional skills and subject-matter expertise through continual study and research and through involvement in professional organizations; has network of contacts that facilitates the identification of relevant expertise internal or external to the Agency.

- Initiates and broadens liaison relationships with professional or academic organizations to remain current in specific expertise and with industry best practices.
- Serves as a senior representative at internal events or other relevant events and displays an understanding of the Agency's strategic mission and CIA University's mission, vision, and objectives.

Knowledge, Skills, and Abilities

Ability to become familiar with current Agency priorities, programs, and issues in order to adapt training programs to reflect changes in Agency mission, structure, regulations, or processes.

Ability to work independently and as part of a team.

Analytic and problem-solving skills; demonstrated ability to apply structured analysis methods to various types of data to establish trends, determine variability, and diagnose the affect on training curricula.

Deep subject-matter expertise in a field relevant to the Agency mission.

Excellent oral, written, and interpersonal communication skills.

Outstanding facilitation skills to manage group processes and elicit student participation.

Working knowledge of project management concepts and principles.

Minimum Education

Bachelor's degree in subject-matter field relevant to the Agency or advanced degree in education-related field.

Minimum Experience

Extensive experience in adult learning and/or in performing one or more core functions (analysis, operations/tradecraft, WMD, leadership, technical collection, or support) and broad understanding of Agency structure and mission.

Technology

May include the use of computer-mediated teaching and learning tools (or the use of Smart Boards).

Work Environment

Work is primarily performed in an instructional setting as well as in an office environment. Some work requires off-site/residential training. Some overseas travel may be required.

Supervision Received and Given

Received: Works with general guidance and oversight provided by the Directors or Deputy Director of Agency University schools or their department heads.

Given: None.

Intel Educator - Full Performance

Skill Community: Human Resources

Labor Group: CIAU

Job Classification: Contractor

Status: Active

Date Effective: 5/17/2012

Standard Occupational Code:

Long Summary:
This is full-performance-level work within the Educational occupation. Incumbents work independently, and in accordance with prescribed course direction, to provide cross-directorate, corporate training that is designed to instill the Agency's vision, mission, and values in officers at critical junctures throughout their careers or provide training that gives officers knowledge and skills essential to performing the Agency's mission. Incumbents have analytic and communication skills that are used to conduct training needs assessments develop learning objectives and course/program documentation, deliver instruction that elicits student participation and mastery of learning objectives, and review post-course evaluations. Full-performance educators use program-management skills to ensure the smooth delivery of classroom and computer-mediated instructional programs or the development of learning experiences by a project team. The proportion of time spent on curriculum design versus classroom or in-person delivery will vary with the duties of the position.

Short Summary:

This is full-performance Intelligence Educator work to provide cross-directorate, corporate training to give officers knowledge and skills essential to performing the Agency's mission. Some travel to domestic and foreign field locations may be required. The position is responsible for providing cross-directorate, corporate training to give officers knowledge and skills essential to performing the Agency's mission.

Duties, Tasks, and Responsibilities

Conducts evaluations to determine strengths and problem areas of a course; periodically reviews established curricula and recommends and develops appropriate changes for continuous improvement, if necessary.

- Designs and uses Level 2 assessments in courses.
- Reviews course exercises for content and correctness.
- Develops evaluation strategies for continuous improvement.

Coordinates training classes, including the scheduling of instructors, facilities, and materials.
- Schedules events to meet organizational requirements, including time, location, and instructor.
- Coordinates with other agencies on student attendance, out-of-building exercises, and site visits.
- Coordinates logistical requirements with appropriate personnel and maintains class rosters, to include manipulating additions, substitutions, and deletions, and determining appropriate student credit.

Delivers training using a variety of instructional strategies and presentation and elicitation techniques to engage students in the learning process; facilitates group activities and uses various classroom management techniques to ensure the needs of a diverse student population are met.

- Identifies relevant training materials for use in class; incorporates adult learning principles into learning activities.
- Uses computer software, Internet, and other enterprise-wide tools for research, course development, and course delivery.
- Manages classroom to maintain positive learning environment; encourages the expression of different opinions.
- Modifies activities and procedures depending on the dynamics of each class; uses individual differences to enrich the learning environment (for example, instructor teams and class participants).
- Instructs personnel by conducting learning courses, workshops, and seminars.
- Uses enterprise-wide toolset for computer-mediated learning.

Develops course documentation—lesson plans, handouts, instructor notes—and assists in designing evaluation instruments to assess the knowledge and skills acquired by participants.

- Designs instructional materials for instructor and student use, including visuals, handouts, flipcharts, and reference guides.
- Monitors student performance and customer satisfaction and adjusts the learning experience and related course material based on feedback.
- Redesigns program or course based on results of pilot, beta test, or evaluations.
- Produces training and documentation plan.
- Prepares all instructor materials (e.g., course outline, background material, and training aids).
- Prepares all student materials (e.g., course manuals, workbooks, handouts, completion certificates, and course critique forms).

In coordination with Agency personnel, conceptualizes, plans, and conducts needs assessments to respond to Agency and IC mission priorities; develops and executes organizational and employee data using a variety of techniques; analyzes needs assessment data and determines its significance and usefulness in training.

- Determines methodologies to diagnose and address problems, and designs instruments and procedures for determining learner and/or organizational needs.
- Performs appropriate information gathering interventions (e.g. in-depth interviews, focus groups, etc.).
- Identifies issues and develops learning approaches.
- Works with training experts from other organizations who assist in designing and developing courses.
- Applies adult learning theory in formulating recommendations derived from needs data.
- Keeps abreast of organizational climate and mission changes and is keenly sensitive to customer needs and concerns.
- Performs analysis of technical needs/requirements and is knowledgeable of learning infrastructure and capabilities.
- Identifies training and documentation requirements.

In coordination with Agency personnel, designs classroom and online learning experiences that reflect knowledge of adult education principles and appropriate subject-matter expertise, incorporates a variety of instructional strategies, and has measurable learning objectives.

- Applies new concepts and approaches to design and implements learning programs that address current and future mission and business needs.
- Writes learning objectives for courses and programs based on needs assessment.
Develops strategies for including technological solutions in training experiences, where appropriate.
- Updates skills and knowledge to stay current with professional and technological developments by attending classes and conferences or reading journals.
- Searches databases and other sources to gather subject-matter information and to maintain technological currency.
- Maintains network of contacts that facilitates the identification of relevant expertise internal or external to the Agency.
- Assembles content and technical teams for large-scale course design.
- Uses project-management skills to ensure deadlines are met and deliverables are satisfactory.

Knowledge, Skills, and Abilities

Ability to become familiar with current Agency priorities, programs, and issues in order to adapt training programs to reflect changes in Agency mission, structure, regulations, or processes.

Ability to work independently and as part of a team.

Analytic and problem-solving skills; demonstrated ability to apply structured analysis methods to various types of data to establish trends, determine variability, and diagnose the affect on training curricula.

Basic knowledge of project-management concepts and principles.

Excellent oral, written, and interpersonal communication skills.

Knowledge of adult education and instructional design principles, evaluation levels, and methodologies; knowledge of instructional technology and distance/on-line learning, to include multimedia, web design, and Web 2.0 tools in support of teaching and learning.

Project management skills demonstrated by planning and implementing training solutions in response to customer needs; administering project budgets; and planning timing and delivery with appropriate contingencies.

Subject-matter expertise in a field relevant training area.

Well-developed facilitation skills to manage group processes and elicit student participation.

Minimum Education

Advanced degree in education-related field. Bachelor's degree in a subject matter relevant to the Agency and experience in adult education may be substituted for the advanced degree in education-related field.

Minimum Experience

Three years of progressively responsible experience in adult learning.

Technology

May include the use of computer-mediated teaching and learning tools (or the use of Smart Boards).

Work Environment

Work is primarily performed in an instructional setting as well as in an office environment. Some work requires off-site/residential training. Some overseas travel may be required.

Supervision Received and Given

Received: Works independently; receives broad lateral guidance from a Senior Educator or other Office-level manager.

Given: None.

Intel Educator - Senior

Skill Community: Human Resources

Labor Group: CIAU

Job Classification: Contractor

Status: Active

Date Effective: 5/17/2012

Standard Occupational Code:

Long Summary:
This is senior-level work within the Educational occupation. Positions are located in the Agency University. Incumbents work independently to provide cross-directorate, corporate training that is designed to instill the Agency's vision, mission, and values in officers at critical junctures throughout their careers or provide training that gives officers knowledge and skills essential to performing the Agency's mission. Senior-level educators have advanced course design and/or subject-matter expertise and should have in-depth knowledge of the Agency's mission, products, and customer. Incumbents have advanced analytic, communication, conceptualization, and teamwork skills that are used to conduct training needs assessments, develop learning objectives and course/program documentation, deliver instruction that elicits student participation and mastery of learning objectives, and review post-course evaluations. Senior-level educators use program-management skills to ensure the smooth delivery of classroom and computer-mediated instructional programs or the development of learning experiences by a project team. The proportion of time spent on curriculum design versus classroom or in-person delivery will vary with the duties of the position.

Short Summary:

This is senior Intelligence Educator work to provide cross-directorate, corporate training to give officers knowledge and skills essential to performing the Agency's mission. Some travel to domestic and foreign field locations may be required. The position is responsible for delivering online, blended, and classroom-based training; conducting training needs assessments; developing and managing courses/programs, delivering instruction, and evaluating course effectiveness.

Duties, Tasks, and Responsibilities

Conducts Level Three evaluations to determine strengths and problem areas of a course; periodically reviews established curricula and recommends and develops appropriate changes for continuous improvement, if necessary.

- Reviews course exercises for content and correctness and use in Level Two evaluations.
- Creates and implements Level Three evaluation plans in consultation with the client/customer.
- Designs measurement strategies and analyzes evaluation data and results.

Coordinates training classes, including the scheduling of instructors, facilities, and materials.

- Schedules events to meet organizational requirements, including time, location, and instructor.
- Coordinates with other agencies on student attendance, out-of-building exercises, and site visits.
- Coordinates logistical requirements with appropriate personnel and maintains class rosters, to include manipulating additions, substitutions, and deletions, and determining appropriate student credit.

Delivers training using a variety of instructional strategies and presentation and elicitation techniques to engage students in the learning process; facilitates group activities and uses various classroom management techniques to ensure the needs of a diverse student population are met.

- Identifies relevant training materials for use in class; incorporates adult learning principles into learning activities.
- Uses computer software, Internet, and other enterprise-wide tools for research, course development, and course delivery.
- Manages classroom to maintain positive learning environment; encourages the expression of different opinions.
- Modifies activities and procedures depending on the dynamics of each class; uses individual differences to enrich the learning environment (for example, instructor teams and class participants).
- Instructs personnel by conducting courses, workshops, and seminars.
- Uses enterprise-wide toolset for computer-mediated learning.
- Manages and organizes online content so that students can easily retrieve it later.

Develops course documentation—lesson plans, handouts, instructor notes—and designs evaluation instruments to assess the knowledge and skills acquired by participants.

- Consults and collaborates with client and SMEs on content development.
- Designs and develops instructional materials for instructor and student use, including visuals, handouts, flipcharts, and reference guides.
- Monitors student performance and customer satisfaction and adjusts the learning experience and related course material based on feedback.
- Redesigns programs or curricula based on results of pilot, beta test, or evaluations.
- Produces training and documentation plan.
- Prepares all instructor materials (e.g., course outline, background material, and training aids).
- Prepares all student materials (e.g., course manuals, workbooks, handouts, completion
- Certificates and course critique forms).

In coordination with Agency personnel, conceptualizes, plans, and conducts needs assessments to respond to Agency and IC mission priorities; develops and executes organizational and employee data using a variety of techniques; analyzes needs-assessment data and determines its significance and usefulness in training. Also may serve as a project lead.

- Oversees methodologies to diagnose and address problems and designs instruments and procedures for determining student and/or organizational needs.
- Performs appropriate information-gathering interventions (e.g. in-depth interviews, focus groups, etc.).
- Applies qualitative and quantitative methods to analyze data, identify issues, and develop learning approaches.
- Works with training experts from other organizations who assist in developing courses.
- Applies adult learning theory in formulating recommendations derived from needs data.
- Keeps abreast of organizational climate and mission changes.
- Performs analysis of technical needs/requirements and is knowledgeable of learning infrastructure and capabilities.
- Provides expert advice about organizational development, performance effectiveness, and team development strategies.
- Identifies training and documentation requirements.

In coordination with Agency personnel, designs training experiences for both classroom and online learning experiences that reflect knowledge of adult education principles and appropriate subject-matter expertise, incorporates a variety of instructional strategies, and has measurable learning objectives.

- Designs instruction for a Learning Content management system.
- Develops concepts and approaches to design and implements learning programs that address current and future mission and business needs.
- Writes learning objectives for courses and programs based on needs assessment.
- Develops strategies for including technological solutions in training experiences, where appropriate.
- Updates skills and knowledge to stay current with professional and technological developments by attending classes and conferences or reading journals.
- Searches databases and other sources to gather subject-matter information and to maintain technological currency.
- Maintains network of contacts that facilitates the identification of relevant expertise internal or external to the Agency.
- Leads content and technical teams for complex course or large-scale curriculum design; defines requirements and scopes effort.
- Uses advanced project-management skills to ensure deadlines are met and deliverables are satisfactory.

Participates in instructional certification programs as either an observer or evaluator; acts as a resource to less experienced educators.

- Teaches instructor programs to include course design and evaluation. Provides guidance to less experienced colleagues on organization policies and procedures.

Knowledge, Skills, and Abilities

Ability to conceptualize the planning, implementation, and evaluation of a training program.

Ability to network, develop partnerships, and work effectively with Agency, private industry, academic, and IC officials.

Ability to obtain considerable knowledge of current Agency priorities, programs, and issues in order to adapt training programs to reflect changes in Agency mission, structure, regulations, or processes.

Ability to organize and lead project or work teams.

Ability to work independently and as part of a team.

Considerable knowledge in the application of project-management concepts and principles.

Current subject-matter expertise in a field relevant to the training area.

Excellent analytic and problem-solving skills; demonstrated ability to apply structured analysis methods to various types of data to establish trends, determine variability, and diagnose the affect on training curricula.

Excellent oral, written, and interpersonal communication skills.

Extensive knowledge of professional and technological developments in field of expertise.

Project-management skills demonstrated by planning and implementing training solutions in response to customer needs; administering project budgets; and planning timing and delivery with appropriate contingencies.

Thorough knowledge of adult education and instructional design principles, evaluation levels, and methodologies; knowledge of instructional technology and distance/on-line learning, to include multimedia, web design, and Web 2.0 tools in support of teaching and learning.

Well-developed facilitation skills to manage group processes and elicit student participation.

Minimum Education

Advanced degree in education-related field. Bachelor's degree in a subject matter relevant to the Agency and experience in adult education may be substituted for the advanced degree in education-related field.

Minimum Experience

Extensive experience in adult learning.

Technology

May include the use of computer-mediated teaching and online learning tools (or the use of Smart Boards).

Work Environment

Work is primarily performed in an instructional setting as well as in an office environment. Some work requires off-site/residential training. Some overseas travel may be required.

Supervision Received and Given

Received: Works independently, receives broad lateral guidance from an Educator Program Manager or Office-level manager.

Given: None.

Duties, Tasks, and Responsibilities

Approves major enhancements or changes to the data center baseline.

Briefs application customers on services provided.

Conducts a weekly schedule review.

Coordinates the requirements across division service providers where necessary.

Determines the annual funding requirements for the branch (Contract labor, hardware maintenance, software licensing and data center supplies.

Ensures activities are on the branch schedule.

Ensures contract staff activities are consistent with acceptable data center practices.

Ensures contract staff provides excellent customer service and supports the Service Level Agreement.

Ensures products to be installed are on the Approved Products list.   Plans and executes the branch's budget and oversees activities within the branch.

Ensures schedules updates are included in the master division, group and office schedules.

Meets with vendors on issues with products or service.

Meets with vendors to ensure product support procedures are established and followed.

Provides briefings on project status and plans to division and group management and customers.

Provides guidance, evaluations and feedback for employees
Responsible for maintaining a quality data center environment for all equipment functioning in the center.

Provides information on product maintenance costs, provides input internal customers with annual price information.

Provides information to create customer assessments, for hardware maintenance, provided customers annually by the CIO.

Provides input to determine how services will be provided and funded.

Provides input to determine the services to be provided by the infrastructure specialists.

Requests the obligation of funds to cover expenses.

Reviews requirements with customer for clarity and completeness.

Sets priorities for the branch's work.

Submits 'unfunded' requests for anticipated shortfalls.
Coordinates the installation schedule for equipment within the division and with customers.

Knowledge, Skills, and Abilities

Ability to provide excellent customer service.

Excellent communication skills and ability to communicate technical information clearly.

In-depth knowledge of data center technology including electrical power, air conditioning, access controls, camera monitoring, and floor planning.

In-depth technical knowledge of the various hardware components supporting NT, UNIX and s/390 platforms.

Working knowledge of CWE supported applications (Word, Excel, Powerpoint and Project).

Working knowledge of ISI applications (Charts, SRS and Premis).

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, and carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Provides guidance, evaluations and feedback for employees
Responsible for maintaining a quality data center environment for all equipment functioning in the center.

Provides information on product maintenance costs, provides input internal customers with annual price information.

Provides information to create customer assessments, for hardware maintenance, provided customers annually by the CIO.

Provides input to determine how services will be provided and funded.

Provides input to determine the services to be provided by the infrastructure specialists.

Requests the obligation of funds to cover expenses.

Reviews requirements with customer for clarity and completeness.

Sets priorities for the branch's work.

Submits 'unfunded' requests for anticipated shortfalls.
Coordinates the installation schedule for equipment within the division and with customers.

Knowledge, Skills, and Abilities

Ability to provide excellent customer service.

Excellent communication skills and ability to communicate technical information clearly.

In-depth knowledge of data center technology including electrical power, air conditioning, access controls, camera monitoring, and floor planning.

In-depth technical knowledge of the various hardware components supporting NT, UNIX and s/390 platforms.

Working knowledge of CWE supported applications (Word, Excel, Powerpoint and Project).

Working knowledge of ISI applications (Charts, SRS and Premis).

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Tools

Desktop computers

Hard disk arrays — Redundant array of independent disks RAID systems

Hard disk drives — Hard disks

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, and carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

IT Equipment Specialist - Subject Matter Expert

Skill Community: Enterprise IT

Labor Group: Computing Services

Job Classification: Contractor

Status: Active

Date Effective: 7/2/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Positions are located within the Office of the Chief Information Officer and work under limited supervision. Duties include supervising personnel who monitor and maintain computer equipment; maintaining a quality data center environment; planning and executing the branch's budget and overseeing activities within the branch; coordinating the installation schedule for equipment within the division and with customers; reviewing requirements coming to the branch; acting as liaison to vendors, ensuring product service needs are met, and providing strategic and tactical planning for data center services.

Short Summary:

Duties, Tasks, and Responsibilities

Approves major enhancements or changes to the data center baseline.

Briefs application customers on services provided.

Conducts a weekly schedule review.

Coordinates the requirements across division service providers where necessary.

Determines the annual funding requirements for the branch (Contract labor, hardware maintenance, software licensing and data center supplies.

Ensures activities are on the branch schedule.

Ensures contract staff activities are consistent with acceptable data center practices.

Ensures contract staff provides excellent customer service and supports the Service Level Agreement.

Ensures products to be installed are on the Approved Products list. Plans and executes the branch's budget and oversees activities within the branch.

Ensures schedules updates are included in the master division, group and office schedules.

Meets with vendors on issues with products or service.

Meets with vendors to ensure product support procedures are established and followed.

Provides briefings on project status and plans to division and group management and customers.

Provides guidance, evaluations and feedback for employees
Responsible for maintaining a quality data center environment for all equipment functioning in the center.

Provides information on product maintenance costs, provides input internal customers with annual price information.

Provides information to create customer assessments, for hardware maintenance, provided customers annually by the CIO.

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

IT Program Manager - Developmental

Skill Community: Enterprise IT

Labor Group: Project Management

Job Classification: Contractor

Status: Active

Date Effective: 11/3/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Plans, directs, and coordinates computer-related activities including electronic data processing, information systems, systems analysis, and computer programming. Performs day-to-day management of the program, and develop long-term and strategic objectives to ensure that end user requirements will be satisfied in future years of the contract. Incumbents perform horizontal integration planning, and interface with other functional areas, ensuring that technical solutions and schedules are implemented in a timely manner.

Provide management of contract personnel and ensure high-quality and acceptable task completion and deliverables within their contract in compliance with the SOW. Provide frequent periodic reports on the status of the contractor staffing.

They are the point of contact for non-routine to moderately complex installation projects for communication networks. They are accountable for meeting contractual performance criteria and due dates during service delivery, and successful overall project completion. They coordinate activities in support of program managers and teams that support the provisioning, design, installation, maintenance, and billing of services. They track and monitor service orders through completion and turn-up, and prepare deliverables (e.g., status reports to Government, order information, open issues).

Short Summary:
Plans, directs, and coordinates computer-related activities including electronic data processing, information systems, systems analysis, and computer programming. Incumbents perform horizontal integration planning, and interface with other functional areas, ensuring that technical solutions and schedules are implemented in a timely manner.

Duties, Tasks, and Responsibilities

Analyze the computer and information needs of their organizations from an operational and strategic perspective and determine immediate and long-range personnel and equipment requirements.

Assign and review the work of systems analysts, programmers, and other computer-related workers.

Consult and coordinate with the appropriate Task Manager for problem resolution, task scheduling, new resource requirements, training needs, and task clarification.

Consult with users, management, vendors, and technicians to assess computing needs and system requirements.

Develop computer information resources, providing for data security and control, strategic computing, and disaster recovery.

Direct daily operations of department by: analyzing workflow, establishing priorities, developing standards and setting deadlines.

Direct the work of systems analysts, computer programmers, support specialists, and other computer-related workers.

Ensure that Contractor tasks are completed within the deadlines, tasking guidance from the Government is clear and unambiguous, contract personnel are qualified to perform the tasks, and potential personnel problems are pre-empted.

Establish and implement streamlined processes and procedures enabling the Contractor to rapidly respond to surge requirements for increased contract personnel. Assure SLA requirements are met.

Plan and coordinate activities such as installation and upgrading of hardware and software, programming and systems design, development of computer networks, and implementation of Internet and intranet sites. They are increasingly involved with the upkeep, maintenance, and security of networks.

Review and approve all systems charts and programs prior to their implementation.

Stay abreast of advances in technology.

Knowledge, Skills, and Abilities

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Economics and Accounting — Knowledge of economic and accounting principles and practices, the financial markets, banking and the analysis and reporting of financial data.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Management of Personnel Resources — Motivating, developing, and directing people.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Personnel and Human Resources — Knowledge of principles and procedures for personnel recruitment, selection, training, compensation and benefits, labor relations and negotiation, and personnel information systems.

Production and Processing — Knowledge of raw materials, production processes, quality control, costs, and other techniques for maximizing the effective manufacture and distribution of goods.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Consult and coordinate with the appropriate Task Manager for problem resolution, task scheduling, new resource requirements, training needs, and task clarification.

Consult with users, management, vendors, and technicians to assess computing needs and system requirements.

Develop computer information resources, providing for data security and control, strategic computing, and disaster recovery.

Direct daily operations of department by: analyzing workflow, establishing priorities, developing standards and setting deadlines.

Direct the work of systems analysts, computer programmers, support specialists, and other computer-related workers.

Ensure that Contractor tasks are completed within the deadlines, tasking guidance from the Government is clear and unambiguous, contract personnel are qualified to perform the tasks, and potential personnel problems are pre-empted.

Establish and implement streamlined processes and procedures enabling the Contractor to rapidly respond to surge requirements for increased contract personnel. Assure SLA requirements are met.

Plan and coordinate activities such as installation and upgrading of hardware and software, programming and systems design, development of computer networks, and implementation of Internet and intranet sites. They are increasingly involved with the upkeep, maintenance, and security of networks.

Review and approve all systems charts and programs prior to their implementation.

Stay abreast of advances in technology.

Knowledge, Skills, and Abilities

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Coordination — Adjusting actions in relation to others' actions.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Economics and Accounting — Knowledge of economic and accounting principles and practices, the financial markets, banking and the analysis and reporting of financial data.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.

Management of Personnel Resources — Motivating, developing, and directing people.

Monitoring — Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.

Personnel and Human Resources — Knowledge of principles and procedures for personnel recruitment, selection, training, compensation and benefits, labor relations and negotiation, and personnel information systems.

Production and Processing — Knowledge of raw materials, production processes, quality control, costs, and other techniques for maximizing the effective manufacture and distribution of goods.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Customer relationship management CRM software — ACT! software; Microsoft Dynamics CRM; Performance Solutions Technology ManagePro; Provisioning software

Data base management system software — AlphaFour software; Database management software; Microsoft SQL Server; Oracle software

Development environment software — Borland Delphi; C; Microsoft .NET Framework; Microsoft Visual Basic

Enterprise resource planning ERP software — Microsoft Dynamics AX; Microsoft Dynamics NAV; Oracle E-Business Suite; Oracle JD Edwards OneWorld

Web platform development software — Dynamic hypertext markup language DHTML; Hypertext markup language HTML; JavaScript; Scripting languages

Tools

Access servers — File servers

Computer servers — Mid-range computers; Netware servers; Storage servers; Web servers

Network interface cards — Network interface cards NIC

Peripheral controller cards — Industry standard architecture/peripheral component interconnect ISA/PCI cards

Print servers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

IT Program Manager - Senior

Skill Community: Enterprise IT

Labor Group: Project Management

Job Classification: Contractor

Status: Active

Date Effective: 11/3/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Plans, directs, and coordinates computer-related activities including electronic data processing, information systems, systems analysis, and computer programming. Performs day-to-day management of the program, and develop long-term and strategic objectives to ensure that end user requirements will be satisfied in future years of the contract. Incumbents perform horizontal integration planning, and interface with other functional areas, ensuring that technical solutions and schedules are implemented in a timely manner.

Provide management of contract personnel and ensure high quality and acceptable task completion and deliverables within their contract in compliance with the SOW. Provide frequent periodic reports on the status of the contractor staffing.

They are the point of contact for non-routine to moderately complex installation projects for communication networks. They are accountable for meeting contractual performance criteria and due dates during service delivery, and successful overall project completion. They coordinate activities in support of program managers and teams that support the provisioning, design, installation, maintenance, and billing of services. They track and monitor service orders through completion and turn-up, and prepare deliverables (e.g., status reports to Government, order information, open issues).

Short Summary:
Plans, directs, and coordinates computer-related activities including electronic data processing, information systems, systems analysis, and computer programming. Performs day-to-day management of the program, and develop long-term and strategic objectives to ensure that end user requirements will be satisfied in future years of the contract. Incumbents perform horizontal integration planning, and interface with other functional areas, ensuring that technical solutions and schedules are implemented in a timely manner.

Duties, Tasks, and Responsibilities

Analyze the computer and information needs of their organizations from an operational and strategic perspective and determine immediate and long-range personnel and equipment requirements.

Assign and review the work of systems analysts, programmers, and other computer-related workers.

Consult and coordinate with the appropriate Task Manager for problem resolution, task scheduling, new resource requirements, training needs, and task clarification.

Consult with users, management, vendors, and technicians to assess computing needs and system requirements.

Develop computer information resources, providing for data security and control, strategic computing, and disaster recovery.

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Duties, Tasks, and Responsibilities

Compose technical documents including, user's manuals, training materials, installation guides, proposals, and reports.

Conduct research and ensure the use of proper technical terminology.

Edit functional descriptions, system specifications, user's manuals, special reports, or any other customer deliverables and documents.

Facilitate meetings and information sessions

Manages software life cycles.

Performs project management duties, such as scheduling and review processes.

Plan, test, install, and integrate new and upgraded versions of the relevant operating systems on organizational computer systems, all third-party software components, and subsystems.

Provide documentation, requirements and information updates

Provides technical support to applications and utility developers on requirements for integration into the operating environment.

Researches and resolves complex systems software problems efficiently and accurately while adhering to internal software management standards and procedures.

Serves as technical referent on engineering review boards considering all additions to or changes to the operating environment.

Knowledge, Skills, and Abilities

Ability to design technical solutions for complex requirements.

Ability to independently diagnose, resolve, and communicate complex technical problems in a timely manner

Ability to lead multi-disciplinary teams.

Ability to lead technical teams and/or serve as a technical resource to coworkers and external components.

Ability to provide clear and accurate explanations of complex technical activities, procedures and processes to technical and non-technical audiences.

Ability to provide the highest levels of customer service.

Ability to review the work of and provide guidance and mentoring to coworkers and/or team members.

Demonstrated strong oral and written communication skills in order to articulately express complex technical concepts to both technical and non-technical audiences.

Effective project management skills.

Excellent analytical, planning, and organizational skills.

Expert knowledge of EIT and supported utility and security applications.

Expert knowledge of EIT and mission and goals (e.g., RTE, CHASSIS and Peer Data Centers).

Expert knowledge of MVS, UNIX, LINUX and Windows technology.

Expert knowledge of the organizational standards for systems configurations, related information security policies, and procedures for managing systems software.

Significant knowledge of project management and applications development techniques.

Working knowledge of budget and finance.

• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Knowledge Management - Full Performance

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. This is work within the multi-level System Operations Specialist occupational series. Positions at this level work independently with limited supervision and provide technical leadership and/or supervision to teams of specialists. Positions are responsible for leading the 24x7 operational support to a variety of resolving the most complex operational problems to ensure system availability and performance goals are met. Positions are responsible for managing/leading the teams of systems or application administrators whose duties are the administration of the software systems and its successful integration with the applications software of the major computing systems across the organization. Positions ensure clear and timely communication regarding the application infrastructure with decentralized customer support teams, help desks, customers, senior management, and other technical professional staffs and support organizations providing technical detail and customer-focus appropriate to the audience.

Short Summary:

This is work within the multi-level System Operations Specialist occupational series. Positions at this level work independently with limited supervision and provide technical leadership and/or supervision to teams of specialists. Positions are responsible for leading the 24x7 operational support to a variety of resolving the most complex operational problems to ensure system availability and performance goals are met. Positions are responsible for managing/leading the teams of systems or application administrators whose duties are the administration of the software systems and its successful integration with the applications software of the major computing systems across the organization. Positions ensure clear and timely communication regarding the application infrastructure with decentralized customer support teams, help desks, customers, senior management, and other technical professional staffs and support organizations providing technical detail and customer-focus appropriate to the audience.

Duties, Tasks, and Responsibilities

Compose technical documents including, user's manuals, training materials, installation guides, proposals, and reports.

Conduct research and ensure the use of proper technical terminology.

Edit functional descriptions, system specifications, user's manuals, special reports, or any other customer deliverables and documents.

Facilitate meetings and information sessions

Manages software life cycles.

Performs project management duties, such as scheduling and review processes.

Plan, test, install, and integrate new and upgraded versions of the relevant operating systems on organizational computer systems, all third-party software components, and subsystems.

Provide documentation, requirements and information updates

Provides technical support to applications and utility developers on requirements for integration into the operating environment.

Researches and resolves complex systems software problems efficiently and accurately while adhering to internal software management standards and procedures.

Serves as technical referent on engineering review boards considering all additions to or changes to the operating environment.

Knowledge, Skills, and Abilities

Ability to design technical solutions for complex requirements.

Ability to independently diagnose, resolve, and communicate complex technical problems in a timely manner

Ability to lead multi-disciplinary teams.

Ability to lead technical teams and/or serve as a technical resource to coworkers and external components.

Ability to provide clear and accurate explanations of complex technical activities, procedures and processes to technical and non-technical audiences.

Ability to provide the highest levels of customer service.

Ability to review the work of and provide guidance and mentoring to coworkers and/or team members.

Demonstrated strong oral and written communication skills in order to articulately express complex technical concepts to both technical and non-technical audiences.

Effective project management skills.

Excellent analytical, planning, and organizational skills.

Expert knowledge of EIT and supported utility and security applications.

Expert knowledge of EIT and mission and goals (e.g., RTE, CHASSIS and Peer Data Centers).

Expert knowledge of MVS, UNIX, LINUX and Windows technology.

Expert knowledge of the organizational standards for systems configurations, related information security policies, and procedures for managing systems software.

Significant knowledge of project management and applications development techniques.

Working knowledge of budget and finance.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Full Performance:
• Someone that is fully capable of delivering capabilities related to a particular skill, language, system, or technology.
• Requires a minimum of three (3) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Lead Cyber Security Systems Engineer - Senior

Skill Community: Security

Labor Group: Cyber Security

Job Classification: Contractor

Status: Active

Date Effective: 5/17/2012

Standard Occupational Code:

Long Summary:
Supervise and direct the engineering effort for the projects approved by the program management.
Assist in developing the individual project management plans (SEMP, schedule) for the various development, deployment, and integration elements of the Sponsor's programs, to include schedule requirements, interrelationships of the various elements, and requisite coordination.
Assist with developing concepts of operation, process flow diagrams, SOPs, and specific program plans.

Clarify assumptions, limitations, interfaces, responsibilities, and specific requirements for the program elements.

Monitor the status of designated activities, identify and resolve relevant issues, develop contingency plans, provide updates, and implement corrective actions as required.

Short Summary:
Supervise and direct the engineering effort for the projects identified in this SOW and additional projects approved by the program management.

Duties, Tasks, and Responsibilities

Ensure all program activities are fully coordinated and consistent with the relevant program plans.

Ensure documentation is created and maintained as required and agreed to with program staff Management following Agency and program standards.

In coordination with program management ensure compliance with all applicable Agency, CSG, and program management requirements for managing IT engineering projects, including the Agency Program Management Framework for all network defense projects.

Maintain system baselines and configuration management items, including security event monitoring "policies" in a manner determined and agreed to by the program management. Ensure changes are made using an approval process agreed to in advance.

Plan and convene meetings, focus groups, and related forums, maintaining and facilitating dialog among collateral interests

Knowledge, Skills, and Abilities

Ability to implement and manage repeatable processes and procedures, require engineering team to develop documentation and support Agency PMF and project management activities

Ability to perform hands-on engineering activities as needed and be a subject matter expert able to address operational and performance issues with other engineers and partner organizations.

Good interpersonal, organizational, writing, communications and briefing skills.

Strong analytical and problem solving skills.

Minimum Education

Bachelor's degree in electrical engineering, computer engineering, computer science, or other closely related discipline

Minimum Experience

Minimum of ten years of progressively responsible experience in leading an engineering team with emphasis in managing all engineering, design, implementation, operations and maintenance and deployment activities.

Technology

Encryption technologies

Identity and authentication technologies

Information Assurance assessment tools

Lotus Notes

Microsoft Office

Tools

Computers

Work Environment

Work is primarily performed in an office environment and/or computer laboratory.

Supervision Received and Given

Received: from the Program or Project Manager.
Given: Supervise and direct the contractor engineering effort for the project

Lotus Notes Developer - Developmental

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 10/5/2012

Standard Occupational Code:
 [15-1140] Database and Systems Administrators and Network Architects

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Analyzes functional business applications and design specifications for functional areas. Develops block diagrams and logic flow charts. Translates detailed design into Lotus Notes based solutions. Tests, debugs, and refines the computer software to produce the required product. Prepares required documentation, including both program-level and user-level documentation. Enhances software to reduce operating time or improve efficiency. Provides technical direction to programmers as required to ensure program deadlines are met.

Short Summary:
Analyzes functional business applications and design specifications for functional areas. Develops block diagrams and logic flow charts. Translates detailed design into Lotus Notes based solutions. Tests, debugs, and refines the computer software to produce the required product. Prepares required documentation, including both program-level and user-level documentation. Enhances software to reduce operating time or improve efficiency. Provides technical direction to programmers as required to ensure program deadlines are met.

Duties, Tasks, and Responsibilities

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Assign, coordinate, and review work and activities of programming personnel.

Collaborate with computer manufacturers and other users to develop new programming methods.

Compile and write documentation of program development and subsequent revisions, inserting comments in the coded instructions so others can understand the program.

Conduct trial runs of programs and software applications to be sure they will produce the desired information and that the instructions are correct.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with and assist computer operators or system analysts to define and resolve problems in running computer programs.

Consult with customers about software system design and maintenance.

Consult with managerial, engineering, and technical personnel to clarify program intent, identify problems, and suggest changes.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Correct errors by making appropriate changes and then recheck the program to ensure that the desired results are produced.

Design and develop database management systems, image processing, collaborative tools, data manipulation techniques, data visualization techniques, and directory services.

Design and develop tools and databases for Lotus Notes (to include Domino and data conversion) with relevant operating system platforms.

Design and develop tools that integrate Lotus Notes with commercial applications.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop unit and functional test plan.

Investigate whether networks, workstations, the central processing unit of the system, or peripheral equipment are responding to a program's instructions.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Perform or direct revision, repair, or expansion of existing programs to increase operating efficiency or adapt to new requirements.

Prepare detailed workflow charts and diagrams that describe input, output, and logical operation, and convert them into a series of instructions coded in a computer language.

Provide database architectural and design capabilities.

Provide the operations and maintenance of operational systems.

Train subordinates in programming and program coding

Write or contribute to instructions or manuals to guide end users.

Write, analyze, review, and rewrite programs, using workflow chart and diagram, and applying knowledge of computer capabilities, subject matter, and symbolic logic.

Write, update, and maintain computer programs or software packages to handle specific jobs, such as tracking inventory, storing or retrieving data, or controlling other equipment.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematical Reasoning — The ability to choose the right mathematical methods or formulas to solve a problem.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Mathematics — Using mathematics to solve problems.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Technology

Database management system software — Database management software; Distributed database management software; Microsoft SQL Server; Microsoft transact-structural query language T-SQL

Development environment software — C; Extensible Stylesheet Language Transformation XLST; IBM Rational Rose XDE Developer D93; Microsoft Visual Basic

Object or component oriented development software — C++; Document Object Model DOM Scripting; Simple API for XML SAX; Sun Microsystems Java

Operating system software — Job control language JCL; Unix; VxWorks software; Win CE

Program testing software — Defect tracking software; Fault testing software; IBM Rational ClearQuest; Mercury Interactive LoadRunner

Tools

Desktop computers

High end computer servers — Application servers; Directory servers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Lotus Notes Developer - Expert

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Analyzes functional business applications and design specifications for functional areas. Develops block diagrams and logic flow charts. Translates detailed design into Lotus Notes based solutions. Tests, debugs, and refines the computer software to produce the required product. Prepares required documentation, including both program-level and user-level documentation. Enhances software to reduce operating time or improve efficiency. Provides technical direction to programmers as required to ensure program deadlines are met.

Short Summary:

Analyzes functional business applications and design specifications for functional areas. Develops block diagrams and logic flow charts. Translates detailed design into Lotus Notes based solutions. Tests, debugs, and refines the computer software to produce the required product. Prepares required documentation, including both program-level and user-level documentation. Enhances software to reduce operating time or improve efficiency. Provides technical direction to programmers as required to ensure program deadlines are met.

Duties, Tasks, and Responsibilities

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Assign, coordinate, and review work and activities of programming personnel.

Collaborate with computer manufacturers and other users to develop new programming methods.

Compile and write documentation of program development and subsequent revisions, inserting comments in the coded instructions so others can understand the program.

Conduct trial runs of programs and software applications to be sure they will produce the desired information and that the instructions are correct.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with and assist computer operators or system analysts to define and resolve problems in running computer programs.

Consult with customers about software system design and maintenance.

Consult with managerial, engineering, and technical personnel to clarify program intent, identify problems, and suggest changes.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Correct errors by making appropriate changes and then recheck the program to ensure that the desired results are produced.

Design and develop database management systems, image processing, collaborative tools, data manipulation techniques, data visualization techniques, and directory services.

Design and develop tools and databases for Lotus Notes (to include Domino and data conversion) with relevant operating system platforms.

Design and develop tools that integrate Lotus Notes with commercial applications.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop unit and functional test plan.

Investigate whether networks, workstations, the central processing unit of the system, or peripheral equipment are responding to a program's instructions.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Perform or direct revision, repair, or expansion of existing programs to increase operating efficiency or adapt to new requirements.

Prepare detailed workflow charts and diagrams that describe input, output, and logical operation, and convert them into a series of instructions coded in a computer language.

Provide database architectural and design capabilities.

Provide the operations and maintenance of operational systems.

Train subordinates in programming and program coding

Write or contribute to instructions or manuals to guide end users.

Write, analyze, review, and rewrite programs, using workflow chart and diagram, and applying knowledge of computer capabilities, subject matter, and symbolic logic.

Write, update, and maintain computer programs or software packages to handle specific jobs, such as tracking inventory, storing or retrieving data, or controlling other equipment.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematical Reasoning — The ability to choose the right mathematical methods or formulas to solve a problem.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Mathematics — Using mathematics to solve problems.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

 Object or component oriented development software — C++; Document Object Model DOM Scripting; Simple API for XML SAX; Sun Microsystems Java

Database management system software — Database management software; Distributed database management software; Microsoft SQL Server; Microsoft transact-structural query language T-SQL

Development environment software — C; Extensible Stylesheet Language Transformation XLST; IBM Rational Rose XDE Developer D93; Microsoft Visual Basic

Operating system software — Job control language JCL; Unix; VxWorks software; Win CE

Develop unit and functional test plan.

Investigate whether networks, workstations, the central processing unit of the system, or peripheral equipment are responding to a program's instructions.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Perform or direct revision, repair, or expansion of existing programs to increase operating efficiency or adapt to new requirements.

Prepare detailed workflow charts and diagrams that describe input, output, and logical operation, and convert them into a series of instructions coded in a computer language.

Provide database architectural and design capabilities.

Provide the operations and maintenance of operational systems.

Train subordinates in programming and program coding

Write or contribute to instructions or manuals to guide end users.

Write, analyze, review, and rewrite programs, using workflow chart and diagram, and applying knowledge of computer capabilities, subject matter, and symbolic logic.

Write, update, and maintain computer programs or software packages to handle specific jobs, such as tracking inventory, storing or retrieving data, or controlling other equipment.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematical Reasoning — The ability to choose the right mathematical methods or formulas to solve a problem.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Mathematics — Using mathematics to solve problems.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Management:
• Possesses a combination of leadership and management expertise within an occupation and/or extensive technical skills or experience specific to the skill be managed.
• Normally at least sixteen (16) years of experience specific to the occupation/skill being managed is required.

Technology

Database management system software — Database management software; Distributed database management software; Microsoft SQL Server; Microsoft transact-structural query language T-SQL

Development environment software — C; Extensible Stylesheet Language Transformation XLST; IBM Rational Rose XDE Developer D93; Microsoft Visual Basic

Object or component oriented development software — C++; Document Object Model DOM Scripting; Simple API for XML SAX; Sun Microsystems Java

Operating system software — Job control language JCL; Unix; VxWorks software; Win CE

Program testing software — Defect tracking software; Fault testing software; IBM Rational ClearQuest; Mercury Interactive LoadRunner

Tools

Desktop computers

High end computer servers — Application servers; Directory servers

Integrated circuit testers — In circuit emulators ICE; Logic analyzers

Notebook computers

Personal digital assistant PDAs or organizers — Personal digital assistants PDA

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Lotus Notes Developer - Senior

Skill Community: Enterprise IT

Labor Group: Developer

Job Classification: Contractor

Status: Active

Date Effective: 6/4/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Analyzes functional business applications and design specifications for functional areas. Develops block diagrams and logic flow charts. Translates detailed design into Lotus Notes based solutions. Tests, debugs, and refines the computer software to produce the required product. Prepares required documentation, including both program-level and user-level documentation. Enhances software to reduce operating time or improve efficiency. Provides technical direction to programmers as required to ensure program deadlines are met.

Short Summary:

Analyzes functional business applications and design specifications for functional areas. Develops block diagrams and logic flow charts. Translates detailed design into Lotus Notes based solutions. Tests, debugs, and refines the computer software to produce the required product. Prepares required documentation, including both program-level and user-level documentation. Enhances software to reduce operating time or improve efficiency. Provides technical direction to programmers as required to ensure program deadlines are met.

Duties, Tasks, and Responsibilities

Analyze user needs and software requirements to determine feasibility of design within time and cost constraints.

Assign, coordinate, and review work and activities of programming personnel.

Collaborate with computer manufacturers and other users to develop new programming methods.

Compile and write documentation of program development and subsequent revisions, inserting comments in the coded instructions so others can understand the program.

Conduct trial runs of programs and software applications to be sure they will produce the desired information and that the instructions are correct.

Confer with systems analysts, engineers, programmers and others to design system and to obtain information on project limitations and capabilities, performance requirements and interfaces.

Consult with and assist computer operators or system analysts to define and resolve problems in running computer programs.

Consult with customers about software system design and maintenance.

Consult with managerial, engineering, and technical personnel to clarify program intent, identify problems, and suggest changes.

Coordinate software system installation and monitor equipment functioning to ensure specifications are met.

Correct errors by making appropriate changes and then recheck the program to ensure that the desired results are produced.

Design and develop database management systems, image processing, collaborative tools, data manipulation techniques, data visualization techniques, and directory services.

Design and develop tools and databases for Lotus Notes (to include Domino and data conversion) with relevant operating system platforms.

Design and develop tools that integrate Lotus Notes with commercial applications.

Design, develop and modify software systems, using scientific analysis and mathematical models to predict and measure outcome and consequences of design.

Develop and direct software system testing and validation procedures, programming, and documentation.

Develop unit and functional test plan.

Investigate whether networks, workstations, the central processing unit of the system, or peripheral equipment are responding to a program's instructions.

Modify existing software to correct errors, allow it to adapt to new hardware, or to improve its performance.

Perform or direct revision, repair, or expansion of existing programs to increase operating efficiency or adapt to new requirements.

Prepare detailed workflow charts and diagrams that describe input, output, and logical operation, and convert them into a series of instructions coded in a computer language.

Provide database architectural and design capabilities.

Provide the operations and maintenance of operational systems.

Train subordinates in programming and program coding

Write or contribute to instructions or manuals to guide end users.

Write, analyze, review, and rewrite programs, using workflow chart and diagram, and applying knowledge of computer capabilities, subject matter, and symbolic logic.

Write, update, and maintain computer programs or software packages to handle specific jobs, such as tracking inventory, storing or retrieving data, or controlling other equipment.

Knowledge, Skills, and Abilities

Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.

Clerical — Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.

Communications and Media — Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.

Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

Computers and Electronics — Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.

Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Design — Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Engineering and Technology — Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Mathematical Reasoning — The ability to choose the right mathematical methods or formulas to solve a problem.

Mathematics — Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

Mathematics — Using mathematics to solve problems.

Near Vision — The ability to see details at close range (within a few feet of the observer).

Operations Analysis — Analyzing needs and product requirements to create a design.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Originality — The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.

Problem Sensitivity — The ability to tell when something is wrong or is likely to go wrong. It does not involve solving the problem, only recognizing there is a problem.

Programming — Writing computer programs for various purposes.

Reading Comprehension — Understanding written sentences and paragraphs in work related documents.

Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

Technology Design — Generating or adapting equipment and technology to serve user needs.

Telecommunications — Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.

Troubleshooting — Determining causes of operating errors and deciding what to do about it.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Senior:
• A senior level practitioner.
• Someone that has extensive experience or training related to a particular skill, language, system, or technology and is capable of not only delivering a capability tied to that skill, but passing their knowledge on to others.
• Requires a minimum of six (6) years of experience specific to the skill.
• Ability, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Technology

 Object or component oriented development software — C++; Document Object Model DOM Scripting; Simple API for XML SAX; Sun Microsystems Java

Database management system software — Database management software; Distributed database management software; Microsoft SQL Server; Microsoft transact-structural query language T-SQL

Development environment software — C; Extensible Stylesheet Language Transformation XLST; IBM Rational Rose XDE Developer D93; Microsoft Visual Basic

Messaging Services Specialist - Developmental

Skill Community: Enterprise IT

Labor Group: Administration

Job Classification: Contractor

Status: Active

Date Effective: 10/4/2012

Standard Occupational Code:
[15-1142] Network and Computer Systems Administrators
[15-1142] Network and Computer Systems Administrators

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab.This is work is located primarily in the Network Management Center (ANMC) but also in various other Washington Metropolitan Area locations responsible for the operations and maintenance of the messaging infrastructure. Positions may also perform a variety of duties to ensure that all incoming and outgoing message traffic is delivered to intended, authorized recipients in a timely manner, 24 hours per day/7 days a week. Messaging systems supported include, but are not limited to, the Message Relay System (MRS), the Message Handling Facility (MHF), and the Enterprise Messaging Services (EMS). Duties include disseminating organizational messages based on various Office Unit Symbols (OUS), slugs, text, and other information to and external customers, including the Intelligence Community (IC) and other governmental agencies (OGA); alerting appropriate authorities of high precedence and/or high interest cables; answering customer queries and assisting customers with messaging problems (e.g., formatting errors, misclassifications, and address corrections); and working with components and Directorate representatives to develop and convert -wide message dissemination requirements into messaging dissemination profiles. Depending upon experience level and assignment, incumbents in these positions work under close to general supervision. For any of these positions, tact, discretion, and a commitment to provide first-rate customer service are paramount.

Short Summary:
This is work is located primarily in the Network Management Center (ANMC) but also in various other Washington Metropolitan Area locations responsible for the operations and maintenance of the messaging infrastructure. Positions may also perform a variety of duties to ensure that all incoming and outgoing message traffic is delivered to intended, authorized recipients in a timely manner, 24 hours per day/7 days a week. Messaging systems supported include, but are not limited to, the Message Relay System (MRS), the Message Handling Facility (MHF), and the Enterprise Messaging Services (EMS). Duties include disseminating organizational messages based on various Office Unit Symbols (OUS), slugs, text, and other information to and external customers, including the Intelligence Community (IC) and other governmental agencies (OGA); alerting appropriate authorities of high precedence and/or high interest cables; answering customer queries and assisting customers with messaging problems (e.g., formatting errors, misclassifications, and address corrections); and working with components and Directorate representatives to develop and convert -wide message dissemination requirements into messaging dissemination profiles. Depending upon experience level and assignment, incumbents in these positions work under close to general supervision. For any of these positions, tact, discretion, and a commitment to provide first-rate customer service are paramount.

Duties, Tasks, and Responsibilities

Disseminates organizational messages based on the various Office Unit Symbols (OUS), slugs, text, and other information provided by message originators to correct recipients. (HQS, domestic and foreign sites)

Identifies and corrects message data and utilizes proper security practices and associated communication functions to ensure timely message delivery.

Keep messages flowing through the messaging systems. With assistance from more experienced team members provides support to and external customers, including Intelligence Community customers and other governmental agencies.

Maintains message accountability

Monitors all incoming and outgoing message traffic. Monitors activities associated with the multiple informational flow processes of the messaging systems. (e.g. for the Message Handling Facility this would include the Validation, Combine Skill, Combine Store,

With assistance from more experienced team members, investigates message dissemination problems and makes necessary corrections:
- Corrects incoming and outgoing cable/message traffic (e.g. formatting errors, missing portions) to ensure timely processing.
- Performs modification to non- cable traffic at the request of components (includes relay to field stations, additional dissemination, transfer of action, recall of cable for destruction, and/or correction to text.).
- Assists customers with problems in message origination, delivery, receipt, and/or dissemination: responds to queries; makes requested corrections; adds dissemination; performs cable re-transmissions and cancellations.
- Answers customer queries regarding the message dissemination process

With direction and oversight from more experienced members of the team, notifies proper recipients of after-hours cables that require immediate attention:
- Alerts appropriate Duty Officers or action units to high precedence cables or cables that may be of interest to them (including CRITIC, FLASH and NIACT cables).
-Alerts Office of Medical Services of medical emergencies, domestic and in the field after normal duty hours.

Works closely with more experienced team members to change or enhance profiles, OUSs, or other dissemination indicators to meet the customer's requirements.
- Maintains a daily log of all incoming requirements.
- Works closely with component Information Management Officers (IMO), who are responsible for coordinating the requirements originating from their components, and with directorate component personnel that manage the message databases.
- Develops and converts simple -wide message dissemination requirements into messaging profiles using logic statements designed to satisfy requirements. (This includes, but is not limited to, creating new Prescribed and Limited (P&L) profiles, Restricted Handling (RH) profiles, new Office Unit Symbols (OUS), modification of profiles, and adding dissemination.) Complicated requirements will be addressed with assistance from more experienced team members.
- Updates and maintains message dissemination profiles.
- Maintains message address database to ensure the accuracy of cable addresses and collective addresses. Ensures that all changes with operational impacts are coordinated and documented.
- Occasionally participates in the testing of messaging system software upgrades.

Knowledge, Skills, and Abilities

A basic understanding of the organizational structure

Ability to communicate effectively with all levels of personnel

Ability to investigate and resolve customer concerns, independently or as part of a team, in a professional manner.

Ability to read, write, and understand Boolean logic statements.

Ability to think logically

Basic computer programming skills, e.g. ability to write if-then statements in a high-level programming language.

For some positions, ability to work 24-hour rotating shifts.

Knowledge of world geography

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Tools

Desktop Computers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Duties include disseminating organizational messages based on various Office Unit Symbols (OUS), slugs, text, and other information to and external customers, including the Intelligence Community (IC) and other governmental agencies (OGA); alerting appropriate authorities of high precedence and/or high interest cables; answering customer queries and assisting customers with messaging problems (e.g., formatting errors, misclassifications, and address corrections); and working with components and Directorate representatives to develop and convert -wide message dissemination requirements into messaging dissemination profiles. Depending upon experience level and assignment, incumbents in these positions work under close to general supervision. For any of these positions, tact, discretion, and a commitment to provide first-rate customer service are paramount.

Duties, Tasks, and Responsibilities

Disseminates organizational messages based on the various Office Unit Symbols (OUS), slugs, text, and other information provided by message originators to correct recipients. (HQS, domestic and foreign sites)

Identifies and corrects message data and utilizes proper security practices and associated communication functions to ensure timely message delivery.

Keep messages flowing through the messaging systems. With assistance from more experienced team members provides support to and external customers, including Intelligence Community customers and other governmental agencies.

Maintains message accountability

Monitors all incoming and outgoing message traffic. Monitors activities associated with the multiple informational flow processes of the messaging systems. (e.g. for the Message Handling Facility this would include the Validation, Combine Skill, Combine Store,

With assistance from more experienced team members, investigates message dissemination problems and makes necessary corrections:
- Corrects incoming and outgoing cable/message traffic (e.g. formatting errors, missing portions) to ensure timely processing.
- Performs modification to non- cable traffic at the request of components (includes relay to field stations, additional dissemination, transfer of action, recall of cable for destruction, and/or correction to text.).
- Assists customers with problems in message origination, delivery, receipt, and/or dissemination: responds to queries; makes requested corrections; adds dissemination; performs cable re-transmissions and cancellations.
- Answers customer queries regarding the message dissemination process

With direction and oversight from more experienced members of the team, notifies proper recipients of after-hours cables that require immediate attention:
- Alerts appropriate Duty Officers or action units to high precedence cables or cables that may be of interest to them (including CRITIC, FLASH and NIACT cables).
-Alerts Office of Medical Services of medical emergencies, domestic and in the field after normal duty hours.

Works closely with more experienced team members to change or enhance profiles, OUSs, or other dissemination indicators to meet the customer's requirements.
- Maintains a daily log of all incoming requirements.
- Works closely with component Information Management Officers (IMO), who are responsible for coordinating the requirements originating from their components, and with directorate component personnel that manage the message databases.
- Develops and converts simple -wide message dissemination requirements into messaging profiles using logic statements designed to satisfy requirements. (This includes, but is not limited to, creating new Prescribed and Limited (P&L) profiles, Restricted Handling (RH) profiles, new Office Unit Symbols (OUS), modification of profiles, and adding dissemination.) Complicated requirements will be addressed with assistance from more experienced team members.
- Updates and maintains message dissemination profiles.
- Maintains message address database to ensure the accuracy of cable addresses and collective addresses. Ensures that all changes with operational impacts are coordinated and documented.
- Occasionally participates in the testing of messaging system software upgrades.

Knowledge, Skills, and Abilities

A basic understanding of the organizational structure

Ability to communicate effectively with all levels of personnel

Ability to investigate and resolve customer concerns, independently or as part of a team, in a professional manner.

Ability to read, write, and understand Boolean logic statements.

Ability to think logically

Basic computer programming skills, e.g. ability to write if-then statements in a high-level programming language.

For some positions, ability to work 24-hour rotating shifts.

Knowledge of world geography

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Expert:
• Typically someone that is a recognized expert or certified practitioner with a particular computer language, system or technology that can not only deliver capabilities, but can mentor and train others.
• Generally requires eleven (11) years of experience specific to the skill and relevant training or certifications.
• Expertise, training and actual work experience with the specific computer language, systems, and/or technology is significantly more important than the number of years of experience. This is especially true with emerging technologies.

Tools

Desktop Computers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor
performance will be completed by the government at the contract level.

Messaging Services Specialist - Full Performance

Maintains message accountability

Monitors all incoming and outgoing message traffic. Monitors activities associated with the multiple informational flow processes of the messaging systems. (e.g. for the Message Handling Facility this would include the Validation, Combine Skill, Combine Store,

With assistance from more experienced team members, investigates message dissemination problems and makes necessary corrections:
- Corrects incoming and outgoing cable/message traffic (e.g. formatting errors, missing portions) to ensure timely processing.
- Performs modification to non- cable traffic at the request of components (includes relay to field stations, additional dissemination, transfer of action, recall of cable for destruction, and/or correction to text.).
- Assists customers with problems in message origination, delivery, receipt, and/or dissemination: responds to queries; makes requested corrections; adds dissemination; performs cable re-transmissions and cancellations.
- Answers customer queries regarding the message dissemination process

With direction and oversight from more experienced members of the team, notifies proper recipients of after-hours cables that require immediate attention:
- Alerts appropriate Duty Officers or action units to high precedence cables or cables that may be of interest to them (including CRITIC, FLASH and NIACT cables).
-Alerts Office of Medical Services of medical emergencies, domestic and in the field after normal duty hours.

Works closely with more experienced team members to change or enhance profiles, OUSs, or other dissemination indicators to meet the customer's requirements.
- Maintains a daily log of all incoming requirements.
- Works closely with component Information Management Officers (IMO), who are responsible for coordinating the requirements originating from their components, and with directorate component personnel that manage the message databases.
- Develops and converts simple -wide message dissemination requirements into messaging profiles using logic statements designed to satisfy requirements. (This includes, but is not limited to, creating new Prescribed and Limited (P&L) profiles, Restricted Handling (RH) profiles, new Office Unit Symbols (OUS), modification of profiles, and adding dissemination.) Complicated requirements will be addressed with assistance from more experienced team members.
- Updates and maintains message dissemination profiles.
- Maintains message address database to ensure the accuracy of cable addresses and collective addresses. Ensures that all changes with operational impacts are coordinated and documented.
- Occasionally participates in the testing of messaging system software upgrades.

Knowledge, Skills, and Abilities

A basic understanding of the organizational structure

Ability to communicate effectively with all levels of personnel

Ability to investigate and resolve customer concerns, independently or as part of a team, in a professional manner.

Ability to read, write, and understand Boolean logic statements.

Ability to think logically

Basic computer programming skills, e.g. ability to write if-then statements in a high-level programming language.

For some positions, ability to work 24-hour rotating shifts.

Knowledge of world geography

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Subject Matter Expert (SME):
• Individual is acknowledged as a SME within the occupation and/or specific skill.
• Generally someone that is certified with the specific language, system, or technology required.
• Normally requires at least sixteen (16) years of experience specific to the skill or occupation.
However, for specific computer languages, systems or technologies, expertise with the subject matter or technology outweighs the number of years of experience. This is especially true with emerging technologies.
• SMEs shall be capable of mentoring or training other team members and sharing their expertise within and across contracts, organizational boundaries and with Customers.

Tools

Desktop Computers

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Multimedia Specialist - Developmental

Skill Community: Logistics

Labor Group: IPS

Job Classification: Contractor

Status: Active

Date Effective: 5/17/2012

Standard Occupational Code:
[27-1014] Multimedia Artists and Animators
[27-1014] Multimedia Artists and Animators

Long Summary:
The incumbent will be responsible for assisting in the development of interactive multimedia products; curriculum design, and technical writer/editor support to successfully prepare high-end interactive, which will be disseminated via CIALINK, INTELINK and/or CD/DVD. These courses will incorporate all phases of audio–visual production. The individual will assist in the rehearsing and directing of casts for video and audio recording. The multimedia products may include (but not limited to) representation of actual events, dialogue, narration, sound effects, music and 3D animation. This individual will function as a member of an overall multimedia team. This individual will conduct research necessary to develop new and revise existing training courses. The individual will have general working knowledge of state–of–the–art multimedia production software to include: Adobe Flash (including Action Script), Authorware, PhotoShop, Illustrator, Premier, RoboHelp, Captivate, and Director.

Short Summary:
The incumbent will be responsible for assisting in the development of interactive multimedia products; curriculum design, and technical writer/editor support to successfully prepare high-end interactive, which will be disseminated via CIALINK, INTELINK and/or CD/DVD.

Duties, Tasks, and Responsibilities

Assists in the development of illustrations, interactive maps and charts, imagery, 3D/2D animations, video and audio edits and effects, typography, and other elements to ensure project requirements are met.

Participates in the design, development, and production of complex, high-end interactive multimedia products; applying expertise in the design and development of products and services.

Knowledge, Skills, and Abilities

General knowledge of multimedia program (web or authored) design methodology and techniques.

Minimum Education

Bachelor of Arts degree in Fine Arts

Minimum Experience

Five years of progressively responsible professional multimedia experience.

Technology

SQL, Oracle, ODBC, Cold Fusion CFML, Authorware, Robohelp, Captivate, Firefox, Adobe Dreamweaver, Avid Video editing software, Final Cut Pro3D Studio Max, windows XP, Apple Mac OS 10.x, , Director lingo, MS Powerpoint, Adobe Photoshop, Adobe Illustrator, Multimedia-Flash, Flash Action, Netscape and MS Internet Explorer web Browsers, Beginner level in HTML.

Tools

Multimedia related hardware such as laptop computers, display devices, portable DVD players, VTRs, DVD/CD-ROM duplicators, scanners, DVD payers/recorders, video camcorders, digital cameras, and various print devices.

Work Environment

General office environment with Apple and PC based workstations. Some work may be performed in a video production studio.

Supervision Received and Given

Received: Performs work independently under general supervision or guidance from senior officers

Given: none

Job Classification: Contractor

Status: Active

Date Effective: 5/17/2012

Standard Occupational Code:
 [27-1014] Multimedia Artists and Animators
 [27-1014] Multimedia Artists and Animators

Long Summary:
This is full performance-level professional work in the multi-level Multimedia Specialist occupation, located in a variety of offices throughout the Agency. This position is responsible for the production of high-end interactive multimedia products created to present and clarify complex subject matter to diverse audiences, including senior US government officials, senior management throughout the Agency and Intelligence Community, and foreign officials and leaders.

Multimedia Specialists at the full performance level use a variety of specialized multi-media knowledge, skills, and abilities to design and develop sophisticated multimedia products. Multimedia specialists assume responsibility for multimedia project management, project team leadership, customer relations, product research and content development, programming/authoring, audio and video editing, interface design, software and hardware, testing and quality control procedures. In addition, full performance multimedia specialists design products in support of multimedia presentations including but not limited to posters, brochures and web-based products. Personnel with experience in another occupation specialty such as graphic design and cartography are expected to use their specialty expertise in the development and design of multi-media products.

Short Summary:

This position is responsible for the production of high-end interactive multimedia products created to present and clarify complex subject matter to diverse audiences.

Duties, Tasks, and Responsibilities

Delivers final product and provides instructions to customer.

- Delivers final product as CD-ROM, DVD, Web, or other unique deliverables (e.g., kiosks and exhibits) for the customer's mission requirements.
- Provides instruction to customers on aspects of the project, including navigation and specialized computer and display equipment.

Designs sophisticated interactive multimedia products.

- Designs and authors complex interface and navigation.
- Creates detailed artwork, such as illustrations, interactive charts, photographs, interactive maps, 3D animations, special effects.
- Ensures multimedia products are formatted appropriately for distribution and archival.
- Serves as a project manager or team lead for contractor groups that may include video producer/directors, graphic designers, cartographers, or multimedia designer/developers.
- Casts and rehearses actors and narrators for multimedia productions.
- Composites and edits video footage, narration, sound effects, graphics, animation and music.
- Provides advice and troubleshooting for complex interface and navigation schemes.

Develops original content.

- Researches and analyzes multimedia methodology and subject matter to develop original concepts for presenting complex ideas.
- Creates project storyboards and work plans.
- Researches and acquires necessary releases, licenses, and approvals as required.
- Provides direction and guidance to project cotnractor team members in the interpretation of customer requirements.
- Provides guidance in the collection of video source footage, audio sound elements, and other existing or archived graphic or cartographic materials.
- Applies personal full performance multi-media specialty expertise (graphic design, videography, cartography, or multimedia design/development) to produce the related multimedia requirements and to provide cross-specialty training to others.
- Provides periodic product content reviews for the customer, negotiating production content changes and deadlines as appropriate.

Initiates content and leads production coordination activities with the project team.

- Develops new concepts, coordinates team production methodology, and assesses whether alternative formats, media, or technology are appropriate.
- Develops unique specialty content, such as 3D animation, special visual effects, narration and sound effects, original video, audio or video editing, dynamic maps, graphics, or databases, illustrations, etc.

Performs administrative or other ad hoc duties.

- Follows-up on customer issues, questions, and/or technical problems with the product; refers to senior staff for troubleshooting or resolution.
- Archives final product files per established guidelines.
- Prepares written reports to close out project, including details on milestones, production steps and procedures taken, and identified issues and concerns.
- Keeps apprised of industry technological enhancements and changes; assesses and selects enhancements/innovations deemed feasible and appropriate.

Tests and reviews products for quality control.

- Tests integrated content on various platforms and networks to ensure viewing, interactivity, and audio/video quality.
- Reviews content with customers and other appropriate personnel (e.g., editors, scientists, analysts, cartographers, graphic designers, videographers, engineers, intelligence educators, etc.) to ensure accuracy, completeness, and correct Classification and controls or declassification based on customer requirements for viewing population and distribution.
- Incorporates revisions into the final product.

Works collaboratively with the customer and/or project manager to coordinate and develop plans for sophisticated multimedia project production.

- Defines project goals, scope, and requirements (i.e., audience, deadline, final product format, delivery methods) for all phases of planning and production.
- Assembles and leads contractor teams.
- Interprets customer requirements and project complexity to determine team and technical resources needed for timely, accurate product delivery.
- Develops production timelines for projects.
- Advises customers on proper approach, product type, and methodology and provides effective solutions to their data presentation needs.
- Proposes alternative approaches and mediums for customer's consideration.
- Provides technical information to customer's inquiries.

Knowledge, Skills, and Abilities

Ability to apply the broad range of specialty software products used in multimedia productions, including Macromedia Director, Adobe product suites, and other complementary multimedia software.

Ability to utilize innovative and creative problem solving and analytical thinking skills to develop, organize, clarify, and enhance alternative approaches to more complex multimedia requirements.

Demonstrated ability to foster, develop, and lead teams.

Excellent interpersonal skills to work and interface with customers, senior management, technical staff and project team members.

Thorough knowledge of and adherence to copyright laws and ADA 508 regulations.

Thorough knowledge of at least 3 of the following core skill areas AND basic knowledge of at least one additional skill area:

- Multimedia project development and production.
- Effective navigation and interface design.
- Video and audio recording and editing methodology and techniques, CCTV, and video codes.
- Video productions, lighting, composition, and studio design.
- Multimedia-related hardware, such as laptop computers, display devices, portable DVD players, DVD/CD-ROM duplicators, scanners, DVD players/recorders, DVD/CD-ROM burners, video camcorders, digital cameras, various print devices, etc.
- Graphic design, video, cartography, or authoring software.
- Ability to obtain thorough knowledge of Agency policies and guidelines for publications and multimedia production.
- Ability to quickly adjust work schedule and work extra or unusual shift hours to service heavy production demands and current intelligence or crisis tasking.

Thorough knowledge of multimedia design/development specialty software such as Macromedia and Adobe suite of products, DVD and CD-ROM software, AVID editing systems and audio editing software, etc.

Thorough knowledge of program (web or authored) design methodology and techniques.

Thorough knowledge of software and production methodology for print, 3D animation and modeling, web, dynamic map or graphic, or multimedia programming/authoring.

Thorough knowledge of video compression and file formats.

Minimum Education

Bachelor's degree in one of the multimedia occupation specialties (i.e., graphic design, cartography, videography, multimedia art/design), or a closely related field.

Minimum Experience

Four years of progressively responsible experience in multimedia development and design
A portfolio containing at least five representative samples of recent products is required.

Technology

3D software packages Maya, Bryce and Poser

Adobe suite of products including Photoshop AfterEffects, Flash, Illustrator, Dreamweaver, Captivate, Premiere Pro, Soundbooth and Encore

DVD authoring software Sonic DVDit

Encoding software Sorensen Squeeze and MPEG Streamclip

Tools

Desktop scanner

Multimedia Apple based workstations

Narration Windows based Workstation

PC Windows based workstation

Video Camera

Work Environment

Work is primarily performed in a professional multimedia design studio using state of the art hardware and software. This position may use an on-site printing and imaging facility and may occasionally contract with an off-site service provider as required. Based on the project complexity and time constraints, extended hours may be required to complete the project in the established timeframe. Extended workdays, holiday, weekend, or shift hours may be required to support crisis events or customer requirements, based on position assignment. Occasional local, domestic, or foreign TDY travel may be required.

Supervision Received and Given

Received: General supervision and guidance on assignments from senior management. Exercises broad latitude and independent judgment and decision-making in accordance with established procedures and techniques.

Given: When serving as a project lead, exercises extensive coordination to contractor project team members and non-technical customers. Provides team leadership and technical guidance to contractor project team members. May assist supervisor with substantive guidance or technical direction for junior team members or serve as a mentor.

Multimedia Specialist - Senior

Skill Community: Logistics

Labor Group: IPS

Job Classification: Contractor

Status: Active

Date Effective: 5/17/2012

Standard Occupational Code:
 [25-9010] Audio-Visual and Multimedia Collections Specialists
 [25-9010] Audio-Visual and Multimedia Collections Specialists

Long Summary:
This is senior-level professional work in the Multimedia Specialist occupation, located in a variety of offices through the Agency. This position is responsible for the production of the most complex, high-end interactive multimedia products created to present and clarify complex subject matter to diverse audiences, including senior US government officials, senior management through the Agency and Intelligence Community, and foreign officials and leaders.

Multimedia Specialists at the senior level use a wide variety of specialized multimedia knowledge, skills, and abilities to design and develop the most sophisticated and complex multimedia products. Multimedia Specialists provide oversight and assume responsibility for project management, team leadership, customer relations, products research and content development, programming/authoring, audio and video editing, interface design, software and hardware, testing and quality control procedures. In addition senior level Multimedia Specialists design the most complex products in support of multimedia presentations including but not limited to posters, brochures, and web-based products. Personnel with experience in another occupation specialty such as graphic design and cartography are expected to use the specialty expertise in the development and design of multimedia products. Multimedia Specialists at this level possesses superior skills in the exploitation of the latest multimedia production techniques, and guides team members to effectively implement these new techniques.

Short Summary:
This position is responsible for the production of high-end interactive multimedia products created to present and clarify complex subject matter to diverse audiences.

Duties, Tasks, and Responsibilities

Delivers final product and provides instructions to customer.

- Delivers final product as CD-ROM, DVD, Web, or other unique deliverables (e.g., kiosks and exhibits) for the customer's mission requirements.
- Provides instruction to customers on aspects of the project, including navigation and specialized computer and display equipment.

Designs highly sophisticated interactive multimedia products.

- Designs and authors complex interface and navigation.
- Creates detailed artwork, such as illustrations, interactive charts, photographs, interactive maps, 3D animations, special effects.
- Ensures multimedia products are formatted appropriately for distribution and archival.
- Serves as a project manager or team lead for contractors that may include video producer/directors, graphic designers, cartographers, or multimedia designer/developers.
- Casts and rehearses actors and narrators for multimedia productions.
- Composites and edits video footage, narration, sound effects, graphics, animation and music.
- Provides advice and troubleshooting for complex interface and navigation schemes.

Develops original content.

- Researches and analyzes multimedia methodology and subject matter to develop original concepts for presenting complex ideas.
- Creates project storyboards and work plans.
- Researches and acquires necessary releases, licenses, and approvals as required.
- Provides direction and guidance to contractor project team members in the interpretation of customer requirements.
- Provides guidance in the collection of video source footage, audio sound elements, and other existing or archived graphic or cartographic materials.
- Applies personal full performance multi-media specialty expertise (graphic design, videography, cartography, or multimedia design/development) to produce the related multimedia requirements and to provide cross-specialty training to others.
- Provides periodic product content reviews for the customer, negotiating production content changes and deadlines as appropriate.

Initiates content and leads production coordination activities with the project team.

- Develops new concepts, coordinates team production methodology, and assesses whether alternative formats, media, or technology are appropriate.
- Develops unique specialty content, such as 3D animation, special visual effects, narration and sound effects, original video, audio or video editing, dynamic maps, graphics, or databases, illustrations, etc.

Performs administrative or other ad hoc duties.

- Follows-up on customer issues, questions, and/or technical problems with the product.
- Archives final product files per established guidelines.
- Prepares written reports to close out project, including details on milestones, production steps and procedures taken, and identified issues and concerns.
- Keeps apprised of industry technological enhancements and changes; assesses and selects enhancements/innovations deemed feasible and appropriate.
- Identifies and ensures the implementation of appropriate production methods.

Tests and reviews products for quality control.

- Tests integrated content on various platforms and networks to ensure viewing, interactivity, and audio/video quality.
- Reviews content with customers and other appropriate personnel (e.g., editors, scientists, analysts, cartographers, graphic designers, videographers, engineers, intelligence educators, etc.) to ensure accuracy, completeness, and correct Classification and controls or declassification based on customer requirements for viewing population and distribution.
- Incorporates revisions into the final product.

Works collaboratively with the customer to coordinate and develop plans for highly complex multimedia project production.

- Defines project goals, scope, and requirements (i.e., audience, deadline, final product format, delivery methods) for all phases of planning and production.
- Assembles and leads contractor teams.
- Interprets customer requirements and project complexity to determine team and technical resources needed for timely, accurate product delivery.
- Develops production timelines for projects.
- Advises customers on proper approach, product type, and methodology and provides effective solutions to their data presentation needs.
- Proposes alternative approaches and mediums for customer's consideration.
- Provides technical information to customer's inquiries.

Knowledge, Skills, and Abilities

Ability to utilize innovative and creative problem solving and analytical thinking skills to develop, organize, clarify, and enhance alternative approaches to the most sophisticated multimedia requirements.

Demonstrated ability to foster, develop, and lead teams.

Demonstrated skill in creating high-end navigation design and project implementation that meets customer's requirements.

Excellent interpersonal skills to work and interface with customers, senior management, technical staff and project team members.

Exceptional ability to apply the broad range of specialty software products used in multimedia productions, including Macromedia Director, Adobe product suites, and other complementary multimedia software.

Extensive knowledge of and adherence to copyright laws and ADA 508 regulations.

Extensive knowledge of multimedia design/development specialty software such as Macromedia and Adobe suite of products, DVD and CD-ROM software, AVID editing systems and audio editing software, etc.

Extensive knowledge of program (web or authored) design methodology and techniques.

Extensive knowledge of software and production methodology for print, 3D animation and modeling, web, dynamic map or graphic, or multimedia programming/authoring.

Extensive knowledge of video compression, file formats.

Minimum Education

Bachelor's degree in one of the multimedia occupation specialties (i.e., graphic design, cartography, videography, multimedia art/design), or a closely related field.

Minimum Experience

Seven years of progressively responsible experience in multimedia development and design. A portfolio containing at least 10-12 representative samples of recent products is required.

Technology

3D software packages Maya, Bryce and Poser

Adobe suite of products including Photoshop AfterEffects, Flash, Illustrator, Dreamweaver, Captivate, Premiere Pro, Soundbooth and Encore

DVD authoring software Sonic DVDit

Encoding software Sorensen Squeeze and MPEG Streamclip

Supervision Received and Given

Received: Receives assignments, resource and project management guidance, and performance evaluation from supervisor. Works independently under general supervision.

Given: Coordinate and direct the work of other contractors and contractor teams. May assist supervisor with substantive guidance or technical direction for junior team members. Expected to serve as mentor.

Network Architect - Developmental

Skill Community: Enterprise IT

Labor Group: IT Engineering

Job Classification: Contractor

Status: Active

Date Effective: 6/1/2012

Standard Occupational Code:

Long Summary:
Although, the following summary covers what is required from individuals in this position, not all Duties, Tasks, and Responsibilities, will apply at each level of performance.   Which duties and responsibilities apply to the respective level will be determined by each vendor and the government using the experience level chart found in the Minimum Experience tab. Work involves oversight and technical direction of system-wide issues requiring advanced levels of understanding of network theory and the specific enterprise network architecture; establishing overall strategic network standards and priorities; providing the highest level of technical guidance and direction in the design and implementation of networking solutions; analyzing the optimization of network system performance; overseeing the strategic interface of network systems configuration; using and incorporating broad technical knowledge of the diverse business areas within the enterprise in the assessment of network engineering technologies, computing systems hardware and software protocols. Additionally, positions provide high-level technical advice and guidance to managers and technical resources on which network technologies can be utilized to meet current and future organizational needs.

Short Summary:

Work involves oversight and technical direction of system-wide issues requiring advanced levels of understanding of network theory and the specific enterprise network architecture; establishing overall strategic network standards and priorities; providing the highest level of technical guidance and direction in the design and implementation of networking solutions; analyzing the optimization of network system performance; overseeing the strategic interface of network systems configuration; using and incorporating broad technical knowledge of the diverse business areas within the enterprise in the assessment of network engineering technologies, computing systems hardware and software protocols. Additionally, positions provide high-level technical advice and guidance to managers and technical resources on which network technologies can be utilized to meet current and future organizational needs.

Duties, Tasks, and Responsibilities

Assigns and coordinates individual and staff activities, prioritizing assignments to meet assigned deadlines and allocating funds and resources.

Depending upon assignment may perform supervisory duties.

Establishes overall network standards and priorities; analyzes the optimization of network system performance.

Monitors the day-to-day office activities, prioritizing assignments to meet assigned deadlines and allocating funds and resources.

Oversees the design, evaluation, selection, implementation and support of major networks; reviews and evaluates network performance, risk and financial analysis feasibility studies.

Oversees the strategic interface of network systems configuration; strategically plans new configurations for operation into the network, using knowledge of the characteristics of the systems being added to the network and the specifications for network interfaces to insure effective integration and optimal network performance.

Provides complete assessments of the technical characteristics of the proposals and alternatives considered to optimize network performance.

Serves as coach and/or mentor to introduce new approaches and to facilitate performance.

Serves as the lead technical expert for the organization in the strategic oversight and planning for network engineering projects and programs.

Knowledge, Skills, and Abilities

Ability to analyze, evaluate, design and recommend network and cabling infrastructure architecture.

Ability to develop and prepare complex technical documents, reports and proposals.

Ability to effectively diagnose, isolate and expediently resolve complex problems pertaining network systems configurations.

Ability to effectively monitor program/project development.

Ability to explain protocols, technical procedures and processes clearly and accurately to both technical and non-technical audiences.

Ability to translate technical terminology in terms understandable to management and technical staff and resources.

Considerable knowledge of Project Management concepts and principles.

Considerable knowledge of bandwidth application requirements, routing through network devices or Public Network Extensions.

Considerable knowledge of network operating systems.

Project planning and management skills, including scope of work, time estimation, and resource assignment.

Strong analytical and conceptual skills; ability to create original concepts/theories for various projects.

Strong interpersonal skills to resolve problems in a professional manner, lead working groups, negotiate and create consensus.

Thorough knowledge of new network architectures and implementation of networked computer systems emphasizing multiple platform environments.

Thorough knowledge of the TCP IP protocol suite, IP subnets and masking, and routing protocols.

Minimum Education

General equivalency guidelines for education, certifications, and experience are provided below; however, these guidelines do not immediately qualify someone at a particular level. Skill levels for an individual are based upon a combination of education, training, and experience, e.g. someone may have 20 years of professional experience; however they may only be qualified as Full Performance based upon the expertise needed to perform the work within that category.
• General professional years of experience may be substituted for specialized years of experience at a ratio of three (3) years of general experience within an occupation for one (1) year of specialized experience.
• Relevant certifications will be considered equivalent to three (3) months of specialized experience.
• An Associate's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to eighteen (18) months specialized experience.
• A Bachelor's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to three (3) years specialized experience (total equivalency is not cumulative when combined with an Associate's degree).
• A Master's degree in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of five (5) years when combined with a Bachelor's).
• A Doctorate in Computer Science, Information Systems, Engineering, Business, or a scientific or technical discipline related to the specific skill will be considered equivalent to two (2) years specialized experience (up to a total of seven (7) years when combined with a Master's and a Bachelor's).

Minimum Experience

Developmental:
• Someone that is new to the career field or occupation, such as a recent college graduate with either course related experience and/or full or part-time work experience totally less than three (3) years of experience specific to the skill.

Work Environment

Work is primarily performed in an office environment. Typically employees sit comfortably to do their work, interspersed by brief periods of standing, walking, bending, carrying papers and books, and extensive periods requiring the use of computer terminals to accomplish work objectives.

Supervision Received and Given

Supervision for individuals for this position will comply with each company's policy. The overall evaluation of contractor performance will be completed by the government at the contract level.

Network Architect - Expert
