OVERVIEW OF MAJOR

The Agriculture and Natural Resources (AGNR) major is an interdisciplinary major designed for students who want broad training in agricultural, environmental, and/or health sciences, with content that does not readily align with any one department or major. Students work with advisors to develop and complete a personalized and interdepartmental baccalaureate program based on their educational and career interests and goals. Courses selected for this major will include both introductory and advanced material from multiple departments in the College of Agriculture, Health and Natural Resources (CAHNR), as well as prerequisite and related knowledge and experiences in other disciplines.

NATURE OF WORK

Careers in Agriculture and Natural Resources can vary as widely as the curriculum in this major. Depending on interest, students may work both in office and practical environments. Typically, the work involves interacting with individuals and communities about issues and concerns relating to agriculture and the environment.
